Characteristics[ edit ] Some commonly found characteristics of serial killers include the following: They may exhibit varying degrees of mental illness or psychopathy , which may contribute to their homicidal behavior. Individuals engage in paraphilias which are organized along a continuum; participating in varying levels of fantasy perhaps by focusing on body parts partialism , symbolic objects which serve as physical extensions of the body fetishism , or the anatomical physicality of the human body; specifically regarding its inner parts and sexual organs one example being necrophilia. Many are fascinated with fire setting. Kenneth Bianchi was teased as a child because he urinated in his pants, suffered twitching, and as a teenager was ignored by his peers. Neither was known to have exhibited many of the tell-tale signs. German serial killer Fritz Haarmann with police detectives, November Development[ edit ] Many serial killers have faced similar problems in their childhood development. This results in the lowering of their self-esteem and helps develop their fantasy world, in which they are in control. It was common for the serial killers to come from a family that had experienced divorce, separation, or the lack of a parent. Furthermore, nearly half of the serial killers had experienced some type of physical or sexual abuse, and even more had experienced emotional neglect. This neglect of the child leads to the lowering of their self-esteem and helps develop a fantasy world in which they are in control. If a child receives no support from those around him or her, then he or she is unlikely to recover from the traumatic event in a positive way. As stated by E. Maccoby, "the family has continued to be seen as a majorâ€”perhaps the majorâ€”arena for socialization". Two serial killers, Bobby Joe Long and Richard Speck , came to attention for reported chromosomal abnormalities. Long had an extra X chromosome. Speck was erroneously reported to have an extra Y chromosome ; in fact, his karyotype was performed twice and was normal each time. Hellen Morrison, an American forensic psychiatrist, said in an interview that while researchers have not identified a specific causal gene, the fact that the majority of serial killers are male leads researchers to believe there is "a change associated with the male chromosome make up. This new reality becomes their fantasy that they have total control of and becomes part of their daily existence. In this fantasy world, their emotional development is guided and maintained. A person can do no wrong in his own world and the pain of others is of no consequence when the purpose of the fantasy world is to satisfy the needs of one person" Garrison, Boundaries between fantasy and reality are lost and fantasies turn to dominance, control, sexual conquest, and violence, eventually leading to murder. Fantasy can lead to the first step in the process of a dissociative state, which, in the words of Stephen Giannangelo, "allows the serial killer to leave the stream of consciousness for what is, to him, a better place". The lack of empathy for their victims among young criminals is just one symptom of a problem that afflicts the whole society. The ability for serial killers to appreciate the mental life of others is severely compromised, presumably leading to their dehumanization of others. This process may be considered an expression of the intersubjectivity associated with a cognitive deficit regarding the capability to make sharp distinctions between other people and inanimate objects. For these individuals, objects can appear to possess animistic or humanistic power while people are perceived as objects. There are exceptions to the typical fantasy patterns of serial killers, as in the case of Dennis Rader , who was a loving family man and the leader of his church. They often lure the victims with ploys appealing to their sense of sympathy. Others specifically target prostitutes , who are likely to go voluntarily with a stranger. These killers maintain a high degree of control over the crime scene and usually have a solid knowledge of forensic science that enables them to cover their tracks, such as burying the body or weighing it down and sinking it in a river. They follow their crimes in the news media carefully and often take pride in their actions, as if it were all a grand project. Often, organized killers have social and other interpersonal skills sufficient to enable them to develop both personal and romantic relationships, friends and lovers and sometimes even attract and maintain a spouse and sustain a family including children. Among serial killers, those of this type are in the event of their capture most likely to be described by acquaintances as kind and unlikely to hurt

anyone. Ted Bundy and John Wayne Gacy are examples of organized serial killers. Organized nonsocial offenders tend to be on the higher end of the average, with a mean IQ of They are likely to be unemployed, a loner, or both, with very few friends. They often turn out to have a history of mental illness, [61] and their modus operandi M. Angel of Mercy criminology Some people with a pathological interest in the power of life and death tend to be attracted to medical professions or acquiring such a job. Another such killer was nurse Jane Toppan , who admitted during her murder trial that she was sexually aroused by death. Female[ edit ] Highway prostitute Aileen Wuornos killed seven men in Florida between and Female serial killers are rare compared to their male counterparts. Keppel, and Victoria B. Titterington, state that "the Justice Department indicated 36 female serial killers have been active over the course of the last century. They used the classifications of black widow , angel of death, sexual predator, revenge, profit or crime, team killer, question of sanity, unexplained, and unsolved. In using these categories, they observed that most women fell into the categories of black widow or team killer. In simple terms, he described it as a woman who kills two or more husbands or lovers for material gain. Though Castor was not officially defined as a serial killer, it is likely that she would have killed again. Elizabeth herself was neither tried nor convicted. In , however, she was imprisoned in the Csejte Castle, where she remained bricked in a set of rooms until her death four years later. There are three main categories that juvenile serial killers can fit into: There have been studies done to compare and contrast these three groups and to discover similarities and differences between them. Though it is rare, the youngest felon on Death Row is in fact, a juvenile serial killer named Harvey Miguel Robinson. In the United States, the majority of reported and investigated serial killers are white males, from a lower-to-middle-class background, usually in their late 20s to early 30s. She believes that the myth that serial killers are always white might have become "truth" in some research fields due to the over-reporting of white serial killers in the media. As a paradigmatic case of this media double-standard, Walsh cites news reporting on white killer Gary Heidnik and African-American killer Harrison Graham. Both men were residents of Philadelphia, Pennsylvania ; both imprisoned, tortured, and killed several women; and both were arrested only months apart in As the war wound down, Mullin claimed his father instructed him via telepathy to raise the number of "human sacrifices to nature" in order to delay a catastrophic earthquake that would plunge California into the ocean. Forensic psychologists have identified three subtypes of the hedonistic killer: Sex is the primary motive of lust killers , whether or not the victims are dead, and fantasy plays a large role in their killings. Their sexual gratification depends on the amount of torture and mutilation they perform on their victims. The sexual serial murderer has a psychological need to have absolute control, dominance, and power over their victims, and the infliction of torture, pain, and ultimately death is used in an attempt to fulfill their need. As lust killers continue with their murders, the time between killings decreases or the required level of stimulation increases, sometimes both. As his desire increased, he experimented with drugs, alcohol, and exotic sex. Once it happened the first time, it just seemed like it had control of my life from there on in. The killing was just a means to an end. That was the least satisfactory part. So after that, I started using the drilling technique. Thrill killing The primary motive of a thrill killer is to induce pain or terror in their victims, which provides stimulation and excitement for the killer. They seek the adrenaline rush provided by hunting and killing victims. Thrill killers murder only for the kill; usually the attack is not prolonged, and there is no sexual aspect. Usually the victims are strangers, although the killer may have followed them for a period of time. Thrill killers can abstain from killing for long periods of time and become more successful at killing as they refine their murder methods. Many attempt to commit the perfect crime and believe they will not be caught. Usually, the victims are family members and close acquaintances. After a murder, a comfort killer will usually wait for a period of time before killing again to allow any suspicions by family or authorities to subside. They often use poison, most notably arsenic , to kill their victims. Female serial killers are often comfort killers, although not all comfort killers are female. Holmes killed for insurance and business profits.

*71% of students are female Economically Disadvantaged Students These are the percentages of the school's students eligible for free or reduced-price lunch, based on data reported to the government.*

There are seven direct lines connecting Buffalo with six different East Coast cities. The New York Central is so big that it has its own police force. The railroad companies create a new industry in the city. They own 3, acres of city land and lay miles of track within the city limits. They directly employ twenty thousand men and indirectly give work to thousands more in the car wheel shops, palace car shops, locomotive and freight car shops, and in the largest bridge company in the world, all of which are located in the city. As a result of the railroads, the Erie Canal is virtually obsolete. By the turn of the century almost every lake steamship company has been bought out by the railroads. Albright has quietly has bought over 1, acres of lakefront property for the relocation of Lackawanna Steel of Scranton, Pennsylvania. There are 25 electric streetcars in Buffalo whereas in there were none , draining the old neighborhoods. Buffalo Automobile Club formed. Mott Pierce is president. Her family will move to Buffalo when she is 6. As Taylor Caldwell she will write more than 40 books that sell more than 30 million copies. Two are television films: In , when the league will break away, Commissioner Ban Johnson will dump Buffalo to put a franchise in Boston. It is later learned Johnson had money invested in the Boston franchise. Henry Perky decides to make his shredded wheat breakfast food in Niagara Falls. Shelton Square is named after the Eminent Rev. William Shelton, rector of St. Johnson Park and Elmwood Avenue: In Johnson Park is an elegant residential mall within walking distance of the heart of downtown Buffalo. Its tree-lined mall is the home of many of the families listed in the social register. Here too is the Buffalo Female Academy later renamed Buffalo Seminary , the most selective school in the city. Thus, close enough to downtown to be convenient, and yet far enough away to preserve its uniqueness, Johnson Park is a well-defined and cohesive urban place. Yet the expansion of downtown is such that peripheral residential areas soon become expendable and the characteristics that had made Johnson Park a cherished corner of the city barely survive the nineteenth century. Because it lay on an east-west axis, Johnson Park blocks movement to and from the new central business district. It is in the in the way. And despite the intense opposition of the wealthy and presumably influential residents of the park, the broad mall is cut in half in and Elmwood Avenue is extended through it to the downtown area. The park now changed quickly. A streetcar line is put on the Elmwood Avenue route and soon Johnson Park, its days as a fancy, in-town residential neighborhood over, is on the way to becoming tattered and tawdry, existing marginally on the fringes of downtown.
