

1: Travelers (TV series) - Wikipedia

Il mare eterno nella mia anima Jojo's Bizarre Adventure OST Battle Tendency [Italian Shiza theme] - Duration: omegasprint , views.

They lived in a city that was much too intense, and held jobs that were much too unfulfilling. Together, they were pretty good at being in their mids. You know, if you agree that your mids are for having existential crises, being mildly carefree and irresponsible, and trying on lots of different selves to see which one fits best. Note to those selves: Yes, this is the kind of quality photography you used to see around here. RIP Blackberry cameras that we genuinely thought were suuh good. Fast forward nearly a decade later, and those same best friends still live in cities! Separate cities, but each in quiet neighborhoods, with homes that are warm and cozy. The lights are out, most nights, by 10 PM. Their jobs are significantly more fulfilling if not entirely unpaid, momlife. In general, you might find them to beâ€¦ responsible?! All of this is to say: When we downed a few bottles of wine and bought this URL, we had no idea of what we wanted it to become. This gives you a lot of hints as to how much wine there was. This thing called influencer culture took hold of the internet. Last November, we reunited in London and hopped over to Paris for a few nights, to stay in the most incredible apartment. Carolyn ticked her 5th and 6th continents off the list with a joint work trip to Argentina and Antarctica!!! Ashley spent a long weekend in Rome, bonding with her husband and their toddler before a new lazy baby arrived on the scene in April. We had another London reunion, complete with the nerdiest day of our lives spent at the Harry Potter studios. Ashley and family spent the summer exploring old and new corners of the UK, from a long weekend in the Cotswolds to a week up on the Isle of Skye. Carolyn just got back from a weekend in Nashville, we have our next reunion in the books for the end of the year, and Ashley is heading back to Italy in just over two weeks. We miss documenting our travels and sharing our findings at home and abroad. We miss the community we used to have here and online. We also are feeling out our options when it comes to sponsored content. We may use affiliate links now and again, and any income will go straight to blog-related antics. Most importantly, we solemnly swear never to bombard your insta feed with hair bear gummies and weightloss tea and essential oils. So, our little travelers.

2: "Travelers"™ Renewed for Season 3 Exclusively on Netflix " Variety

My parents arrived back today from their 5 week holiday with my sisters - Emma and Rebecca. So happy to have them home again xx Please LIKE, SHARE or SUBSCRI.

Premise[edit] In a post-apocalyptic future, thousands of special operatives are tasked with preventing the collapse of society. These operatives, known as "travelers", have their consciousnesses sent back in time and transferred into the body of present-day individuals who would otherwise be moments from death, to minimize unexpected impact on the timeline. The transfer requires the exact location of the target, made possible by twenty-first century smart phones and GPS. These missions are dictated by the Director, an artificial intelligence in the future that monitors the timeline, aimed at saving the world from a series of catastrophic events. One method by which the Director communicates with travelers is via pre-pubescent children used as messengers; unlike adults, any child can safely be taken over for a few minutes and then released from control without risk of killing them. All travelers are required to behave according to certain protocols to protect the timeline. Recurring[edit] J. Enrico Colantoni as Vincent Ingram, Traveler , whose host was supposed to die on September 11, Stephen Lobo as Agent Wakefield, a faction member posing as a traveler. David Lewis as Major Gleason, a hotheaded military officer. Kyra Zagorsky as Dr. Delaney, a brilliant scientist who developed a method for collecting and storing antimatter. Kristine Cofsky as Officer Victoria Boyd, Traveler , a fellow traveler assuming the life of a police officer. Giacomo Baessato as Private Wilson, a military soldier who works for Gleason. Tom McBeath as Ellis, Traveler , a programmer assuming the life of a farmer. Eileen Pedde as Mom, a fellow traveler who assumes the role of a mother in a family of four. Yasmeene Ball as Charlotte, a misfire traveler historian; later a traveler assassin. Karin Konoval as Bloom, Traveler , a high ranking traveler engineer. Louis Ferreira as Sergeant Rick Hall, a jaded traveler team leader. Dylan Playfair as Kyle, a friend of Trevor, later Traveler Paloma Kwiatkowski as Abigail Paris, a young woman that Trevor befriends. Lee Majdoub as Dr. Barker, a doctor with a crush on Marcy. Amanda Tapping as Dr. Stephanie Bennett as Jenny, Traveler , a traveler assigned to help Philip with his heroin addiction.

3: Travelers Annual Report

the state of the travel blog // the return of the lazy travelers Once upon a time, there were two best friends who started a travel blog. They lived in a city that was much too intense, and held jobs that were much too unfulfilling.

For each year on the chart, total return is calculated with January 1, , as the starting point and December 31 of the relevant year as the ending point. Perform Our long-term financial strategy has been successful and will continue to serve as the road map for our perform imperative and the measure of our financial success. Looking ahead, I would like to share a few thoughts on three topics related to our performance that I am asked about frequently: Our marketplace strategy is straightforward: This strategy will result in different priorities from time to time depending on marketplace dynamics. Since late , for example, a principal objective of our domestic Business Insurance business has been to seek pricing gains to improve the outlook for profitability. The success we have achieved in meeting this objective has been due in large part to our franchise value. Put simply, we have the products, services and capabilities that our customers want to buy and that our agent and broker partners want to sell. Importantly, we have also developed superior data and analytic capabilities over decades that put essential information at the fingertips of our frontline underwriters and product managers, allowing them to make disciplined, return-oriented underwriting decisions consistent with our marketplace strategy. We have a culture of balancing the science and art of risk-based decision making based on data and analytics; it is a competitive advantage and one we believe is very hard to replicate. Severe hurricanes and wildfires were no doubt one factor influencing the pricing environment. It is not hard to make the case that in we experienced both. However, a second “ and I believe more significant “ factor impacting the pricing environment is that industry returns have been declining generally for a number of years due to historically low interest rates and loss cost inflation outpacing pricing gains. The pricing gains we achieved in were a good start. However, our work to improve the outlook for returns is not complete. We price our products with a return objective in mind. The price increases we have achieved, a lower U. Others include the adequacy of expiring prices, loss cost inflation, expenses, capital requirements, the impact of claims initiatives and our cost of capital. For Travelers, tax reform and higher levels of net investment income will help shrink, but not completely close, the gap between where our returns are trending and where we would like them to be trending. Accordingly, we will continue to seek to improve the outlook for returns. We will do so in close coordination with our agent and broker partners by selectively and thoughtfully seeking price increases. We believe our customers are best served by a predictable and stable market, and, as a consequence, we favor gradual and manageable price increases to avoid disruption. As always, we will also actively continue to manage all of the other levers of profitability available to us. I would also like to comment on how corporate tax reform will impact our capital management and acquisition strategies. We are not changing our capital management strategy. Our first objective for the capital we generate is to reinvest it in our business to create shareholder value. We will continue to retain capital to support growth that meets our disciplined standards. We also have an ambitious innovation agenda. We are making strategic investments in everything from talent to technology, and with the benefit of tax reform, we are accelerating some of these investments. Beyond that, to the extent we continue to generate excess capital, we will manage it the same way we have for more than a decade “ we will return it to shareholders through dividends and share repurchases. In other words, as a result of tax reform, we expect to have higher earnings and therefore more capital to evaluate through that framework, but the framework will not change. With regard to acquisitions, tax reform has leveled the playing field, making us a more competitive buyer relative to non-U. Having said that, our lens for assessing transactions and our propensity to do them remain the same. We will continue to look for opportunities that improve our long-term return profile, lower our volatility or create shareholder value by providing us with other important strategic benefits. Transform Our competitive advantages set us apart; they are foundational to the success of our long-term financial strategy. Nonetheless, we understand clearly that the world is changing, and changing quickly. Broadly speaking, we see four significant forces of change impacting our industry: Rapid progress in technology is enabling us to reimagine just about every aspect of our business. The

opportunities presented by data and analytics are becoming even more consequential. Traditional distribution is consolidating and alternative models are developing. We are focused intently on these forces of change. While our long-term financial strategy is not changing, the competitive advantages that have fueled our success over the last decade will not necessarily be the same as those we will need to continue to lead for the next decade. That is the focus of our innovation agenda: Ultimately, the vision for our innovation agenda is to be the undeniable choice for the customer and an indispensable partner for our agents and brokers. To that end, we have three key organizational priorities: Extend our advantage in risk expertise. We are investing in intelligent automation, data and analytics, and predictive modeling, to name a few. Provide great experiences for our customers, agents and brokers. We are investing in technologies, capabilities and talent to become faster, easier, nimbler, more digital, more mobile and more personalized. Optimize productivity and efficiency. We are investing in technology and workflow. A key theme running through our investments is that they are designed in large part to enable us to optimize the top line at attractive returns. Importantly, these are not just ideas in the form of blueprints sitting on a drawing board. We have been investing in these priorities for several years, while delivering industry-leading returns and an improving expense ratio. During , we began to see benefits from these investments in the form of a higher top line as well as general and administrative expenses that have been about flat for the past few years. We have the resources and expertise to be successful, and we benefit from a lack of distraction. Moreover, our business is complex, and the value of deep domain expertise in understanding risk and the products and services our customers need to manage that risk cannot be underestimated as the starting point for innovation. We believe the winners in our industry will be those who can innovate successfully on top of a foundation of excellence. Since I began communicating our perform and transform imperative, our employees “our greatest asset” have become its biggest champions. I am inspired by their dedication, the wisdom of their experience and their innovative spirit and ideas. We recognize that to deliver on our promise to customers and produce industry-leading returns over time, we need to maintain our talent advantage. We do so with competitive compensation programs that are designed to attract, motivate and retain the best people; development programs that foster personal and professional growth; and a focus on diversity and inclusion as a business imperative. [Read More](#) Sustaining our communities We do not just cover our communities with our insurance policies, we cover them with our commitment to their success. Our corporate and employee giving are key elements in the sustainability of our success. We are supporting the places where we live and work, and we do so in part because they do so much to support us. We also see our work in our communities as an expression of our values. It motivates and energizes our 30, employees. While Travelers employees volunteer for, and give to, hundreds of different organizations that are meaningful to them, our corporate philanthropy is focused on three main objectives: We profile some of these initiatives on the opposite page. All of these efforts support our belief that we cannot have a strong business if our communities are not strong and the people who call those communities home do not have economic opportunity and pathways to success. [Read More](#) Our enduring promise At the end of a year, it is tempting to tally everything up “every policy written, every risk assessed, every claim closed” in terms of dollars and cents earned. While that is important, it misses an essential point about our business and our company. I have said many times that our expertise in risk enables us to deliver the dollars and cents. That is the core of who we are. But at the heart of who we are is a promise. A promise to take care of our customers. In the end, that is what we sell. We work hard to make sure our agent and broker partners are proud to sell that promise and our customers are happy that they bought it. The power of the core and the heart, and the inextricable link between them, were on full display this year. In crisis after crisis, we followed right behind the first responders who heroically saved lives, and we restored hope and rebuilt livelihoods. Through the expertise, sheer grit and determination of committed Travelers employees, our work resulted in many thousands of homes rebuilt, businesses reopened and cars back on the road. Customers of ours in Texas and Florida were able to celebrate the holiday season in their own dining rooms and living rooms because they bought a Travelers insurance policy. Our promise extends beyond taking care of our customers. It also means taking care of our communities and each other, our Travelers colleagues, because building a successful and sustainable business depends on all three. It is the core and heart together “taking

care of all our stakeholders – that enable us to deliver on our mission of creating shareholder value. And it is only by delivering on that mission that we will be able to continue to invest in maintaining a healthy core and to make good on our promise. It is a virtuous cycle, and all the elements were on full display in As we look back on a year in which Travelers rose to the occasion and look ahead to the opportunities and challenges on the horizon, I am enormously grateful for the counsel and commitment of our Board of Directors, the dedication and passion of every Travelers employee, the partnership and insight of our agents and brokers, the customers we are privileged to serve and the support of our shareholders.

4: Travelers | Netflix Official Site

And Travelers' high-intensity, futuristic plot is a fun way to cozy up on the couch, hide out from the winter cold, and take a short break from reality before diving back into the responsibilities.

Infectious diseases are dynamic, as demonstrated by the introduction and spread of chikungunya virus in the Americas beginning in late and the rapid spread of Zika virus in the Americas in and In contrast, because of the wide use of vaccine, hepatitis A infection is now infrequently seen in travelers. Common infections in returned travelers may be seen at unexpected times of the year. Because influenza transmission can occur throughout the year in tropical areas, and the peak season in the Southern Hemisphere is May to August, clinicians in the Northern Hemisphere must be alert to the possibility of influenza outside the usual US influenza season. Travelers may acquire infections caused by common bacteria that are unusually resistant. The tables in this section identify some common infections by presenting findings or other characteristics, by area of travel and by incubation periods. These highlight only the most common infections. The listed references and websites should be consulted for more detailed information. Fever in returned travelers is often caused by common, cosmopolitan infections, such as pneumonia and pyelonephritis, which should not be overlooked in the search for exotic diagnoses. Travelers may be infected with highly drug-resistant pathogens. Patients with malaria may be afebrile at the time of evaluation but typically give a history of fever or chills. Malaria is the most common cause of acute undifferentiated fever after travel to sub-Saharan Africa and to some other tropical areas. Diagnostic studies should be done promptly and treatment instituted immediately if malaria is diagnosed see Chapter 3, Malaria. A history of taking malaria chemoprophylaxis does not exclude the possibility of malaria. Patients with malaria can have prominent respiratory including acute respiratory distress syndrome , gastrointestinal, or central nervous system findings. Dengue is the most common cause of febrile illness among people who seek medical care after travel to Latin America or Asia. Other arboviral infections are emerging as causes of fever in travelers, including chikungunya and Zika. Viral hemorrhagic fevers are important to identify but are rare in travelers; bacterial infections, such as leptospirosis, meningococemia, and rickettsial infections, can also cause fever and hemorrhage and should be always be considered because of the need to institute prompt, specific treatment. Sexually transmitted diseases, including acute HIV, can cause acute febrile infections. Consider infection control, public health implications, and requirements for reportable diseases. Etiology and outcome of fever after a stay in the tropics. International travel and acquisition of multidrug-resistant Enterobacteriaceae: Euro Surveill ;20 Multicenter GeoSentinel analysis of rickettsial diseases in international travelers, " Emergence of a new antibiotic resistance mechanism in India, Pakistan, and the UK: GeoSentinel surveillance of illness in returned travelers, " Regional variation in travel-related illness acquired in Africa, March "May Troubling news from Asia about treating enteric fever: Lancet Infect Dis May;16 5: Illness after international travel. N Engl J Med. Fever in returned travelers:

5: General Approach to the Returned Traveler - Chapter 5 - Yellow Book | Travelers' Health | CDC

The Travelers, which Wright and best friend Kevin Church put together in the late mids, are back together, booking shows and sifting through material for an album on Patuxent Records. "It's more than being in a good band," Norman said during a meeting with the band in the living room of his Falls Church, Va., home.

Most post-travel infections become apparent soon after travel, but incubation periods vary, and some syndromes can present months to years after initial infection. When evaluating a patient with a probable travel-related illness, the clinician should consider the items summarized in Box The Severity of Illness The severity of illness is not only important in order to triage the patient but also can distinguish certain infections from each other. Is this a potentially life-threatening infection, such as malaria? A severe respiratory syndrome or signs of hemorrhagic fever are examples of cases that may also necessitate prompt involvement of public health authorities. Travel Itinerary The itinerary and activities in which the traveler participated are crucial to formulating a differential diagnosis, because potential exposures differ depending on the region of travel and behaviors. A febrile illness with nonspecific symptoms could be malaria, dengue, typhoid fever, or rickettsial disease, among others. Being able to exclude certain infections will avoid unnecessary testing. A study from the GeoSentinel Surveillance Network found a distinct pattern of diagnoses depending on the region of the world visited. In travelers to sub-Saharan Africa presenting with fever, malaria was the most common specific diagnosis. On the other hand, febrile patients after travel to Latin America or Southeast Asia were much more likely to have dengue. The duration of travel is also important, since the risk of a travel-related illness increases with the length of the trip. A tropical medicine specialist can assist with the differential diagnosis and may be aware of outbreaks or the current prevalence of an infectious disease in an area. The "Ebola virus epidemic in West Africa highlighted the importance of epidemiologic factors and travel itineraries in managing patients and protecting staff and the community. Timing of Illness in Relation to Travel Most ill travelers will seek medical attention within 1 month of return from their destination, because most common travel-related infections have short incubation periods. Occasionally, however, infections such as schistosomiasis, leishmaniasis, or tuberculosis can manifest months or even years later. Therefore, in unusual cases, a detailed history that extends beyond a few months before presentation can be helpful. The most common travel-related infections with short incubation periods are listed in Table Underlying Medical Illness Comorbidities can affect the susceptibility to infection, as well as the clinical manifestations and severity of illness. An increasing number of immunosuppressed people due to organ transplants, immune-modulating medications, HIV infection, or other primary or acquired immunodeficiencies are international travelers see Chapter 8, Immunocompromised Travelers. Vaccines Received and Prophylaxis Used The history of vaccinations and malaria chemo-prophylaxis should be reviewed when evaluating an ill returned traveler. Less than half of US travelers to developing countries seek pretravel medical advice and may not have received vaccines or taken antimalarial drugs. Although adherence to malaria chemoprophylaxis does not rule out the possibility of malaria, it reduces the risk and increases the likelihood of an alternative diagnosis. Fever and a rash in a traveler without measles vaccination would raise concern about measles. The most common vaccine-preventable diseases found in a large GeoSentinel study of returned travelers included enteric fever typhoid and paratyphoid , viral hepatitis, and influenza. More than half of these patients with vaccine-preventable diseases were hospitalized. In addition to malarial parasites, mosquitoes can transmit viruses such as dengue virus, yellow fever virus, chikungunya virus, and Zika virus and filarial parasites such as *Wuchereria bancrofti*. Depending on the clinical syndrome, a history of a tick bite could suggest a diagnosis of tickborne encephalitis, African tick-bite fever, or other rickettsial infections. Tsetse flies are large, and their bites are painful and often recalled by the patient. They can carry *Trypanosoma brucei*, the protozoan that causes African sleeping sickness. Freshwater swimming or other water contact can put the patient at risk for schistosomiasis, leptospirosis, and other diseases. The activities during a trip and the type of accommodations can also influence the risk for acquiring certain diseases. Someone backpacking and camping in rural areas will also have a higher risk of certain diseases than those staying in luxury, air-conditioned hotels. Important
