You can help by adding to it. July 20th century[edit] In the early days of the colonial period , several protection treaties were signed between various indigenous communities and the British colonial government. Until , hopes of an independent state resonated with the region, and lingered consistently in the minds of its natives. Thereafter, the British launched a commission led by Sir Henry Willink to look into the misgivings of these autochthons. The purpose was to tackle the problems of underdevelopment, however, this failed to rise to the expectations of the masses. After much discontent, some of the people attempted to take the extralegal route to achieve their goals. The rebellion was immediately crushed by the Federal and the old Eastern Nigeria government. From then on, complaints about political marginalisation, environmental degradation and economic pauperisation remained among the Ijaw groups , such that a separate Bayelsa State was carved out of Rivers State by the military government during The inland part of the state consists of tropical rainforest , and towards the coast, the typical Niger Delta environment features many mangrove swamps. On the south, it is bounded by the Atlantic Ocean. Its topography ranges from flat plains , with a network of rivers to tributaries. Climate[edit] Rainfall is generally seasonal, variable, as well as heavy, and occurs between the months of March and October through November. The wet season peaks in July, lasting more than days. The only dry months are January and February having little to no effect. For Port Harcourt , temperatures throughout the year are relatively constant with little variation throughout the course of the seasons. Terrain[edit] The land surface of Rivers State can be divided into three zones: The freshwater zone extends north wards from the mangrove swamps. This land surface is generally less than 20m above sea level. As a lower Niger floodplain , it contains a greater silt and clay foundation and is more susceptible to perennial inundation by river floods. On coastal sand ridges, the soils are mostly sandy or sandy loams. Various crops are supported including coconut , oil palm , raffia palm and cocoyam. Flora and fauna[edit] Common fig-tree blue in Port Harcourt Zoo Male Agama lizard Due to its geographical location, Rivers State has always played an important role in the natural history of Nigeria, having been found to host a vast array of wildlife and plants. Its tropical rainforests are home to more species than all other local biomes combined thanks to its climate and canopy structure. Unfortunately, some of the upland forested areas have seen disruption from human activity, impacting negatively on the biodiversity and ecological functions of natural habitats. In most places, the dominant vegetation usually consists of *Elaeis guineensis* which has the highest productivity amongst all recognized oleaginous crops. The riverine part of the state has three hydro-vegetation zones such as beach ridge , salt water and fresh water. Each zone has its own characteristics and composition, with the freshwaters encompassing the upper and lower floodplains of the Niger Delta. There are two storeys that can be distinguished from outside the forest, the emergents include *Symphonia globulifera* , *Cleistopholis patens* , *Uapaca* spp. The understory is composed mainly of *Calamus deeratus* , *Alchornea cordifolia* , *Monodora tenuifolia* , *Harungana madagascariensis* , *Strophanthus preussii* , *Rauvolfia vomitoria* and *Raphia* spp. The interior of the forest is very shady, and as a result a wide variety of shade tolerant forbs e. *Nephrolepis biserrata* , *Culcasia scandens* , *Laportea* spp. By dry season, large cushion of litter cover the floor because of increase in abscission rate of some plants such as *Musanga cecropioides*, *Hallea ledermannii*, *Calamus deeratus*, *Gmelina arborea* , *Raphia* spp. Mammals, reptiles and amphibians are also found in the park. The common mammals are mona monkeys and pygmy hippopotamuses. Among the reptiles and amphibians are snakes and crocodiles , turtles , frogs , lizards , and skinks. It has been identified by BirdLife International as an IBA because of its importance to global populations of grey parrots and other birds. Nun River in the center The state has many rivers, some of which include:
