

1: || SÃ³ Manual | Manual | Manuais ||: Manual Ar Condicionado Samsung Inverter

Samsung Smart Inverter air conditioners are renowned not only for their high quality and efficiency, but installation ease and low-maintenance operation as well. The integration of system wiring has allowed a tremendous reduction in installation time and related costs.

The original manufacture date was October The set was turned on and operating at the time and then promptly shut down by itself. The front blue LED power indicator began flashing four times in a loop or cycle. The flashing LED sequence in this instance points to a problem with one of the following boards: The set shuts down to prevent further damage to other boards or components. I could power cycle the set but it would shut down after after a few seconds. Then as the screen was just about to illuminate, the entire set would just shutdown. The blue LED would again go into the 4X flashing sequence. I could not visually detect any signs of severe component damage on the main PS board. The two large electrolytic capacitors which have been mentioned as problematic in other threads seems fine. The where slightly raised on the top surface, but not blistered or completely blown open. Through reading other posts on this site, I learned that I was able to remove the suspect SDR-U board and then re-power the set. The PS held, and the lower half of the screen illuminated. I would only do this for as brief a period as required to determine if the the other boards would function and the screen would illuminate. Do not pro-long operation in this state so as to not cause further damage. It was somewhat difficult to locate the correct SDR-U board. My local service rep did not have one in stock, and the Canadian parts distributor was also out of stock. They estimated 10 - 14 business days to order one up from the U. Hitachi closed their consumer electronics division in Canada back in By chance, I checked with another service rep in an adjacent town. He had a board for the P We did a visual comparison on the two boards and determined that it would be compatible. The easy part was removing the defective SDR-U board and installing the replacement. The hard part was re-aligning the three ribbon tabs into the respective connectors on the SDR board. Be careful with these ribbons. The other end of each is fused to the plasma panel screen, so if you damage them, your screen is rendered useless. I initially had the same problems as others have posted with having black or gray lines on the screen when the SDR-U was replaced. After gently adjusting the position of the ribbons as they are seated in the connectors, the lines disappeared. This was a slow and frustrating procedure, but it worked, Be patient. 2: What is a Smart Inverter? | Samsung Support Gulf

*The Samsung Air Conditioner features an energy-efficient Digital Inverter with EER It can maintain the desired temperature without frequently shutting off and on, so it consumes less energy. The Digital Inverter helps you to stay comfortable for long periods of time, while using the minimum amount of energy *.*

E Communication error in indoor unit. It displays when the indoor unit receives no data from the outdoor unit. E Communication error between indoor and outdoor unit. It displays in indoor unit. E Room temperature sensor of indoor unit. Open or Short E Communication error between indoor and outdoor unit. It displays in outdoor unit. E Mid 2 temperature sensor of indoor unit. E RPM feed back error of indoor unit. The second motor of indoor unit E Mixed operation mode of indoor units. It occurs when outdoor unit is operating or going to operate in cooling mode or heating mode and then other indoor unit is going to operate in heating mode or cooling mode. E Temperature display setting error for USA market product. Mixed setting with Celsius and Fahrenheit temperature E Opening error of cooling and heating solenoid valve simultaneously in MCU 1st detection E Opening error of cooling and heating solenoid valve simultaneously in MCU 2nd detection E Cross wiring error between communication and power of indoor unit. E It displays when pipe checking operation is not operated. E Communication error between MCU and outdoor unit. E Ambient air temperature sensor of outdoor unit. Open or Short E Ambient air temperature sensor is detached from outdoor unit. Open or Short E Cond temperature sensor of outdoor unit. E Discharge temperature sensor of compressor 1. Open or Short E Discharge temperature sensor of compressor 1. Open or Short E Discharge temperature sensor of compressor 2. Open or Short E Discharge temperature sensor of compressor 3. Open or Short E Discharge temperature sensor of compressor 1 is detached from the sensor hold of the pipe. E Discharge temperature sensor of compressor 1 is detached from the sensor hold of the pipe. E Discharge temperature sensor of compressor 2 is detached from the sensor hold of the pipe. E Discharge temperature sensor of compressor 3 compressor is detached from the sensor hold of the pipe. E Suction temperature sensor is detached from the sensor hold of the pipe. E Sump Base temperature sensor of compressor 1. Open or Short E Sump Base temperature sensor of compressor 1. Open or Short E Sump Base temperature sensor of compressor 2. Open or Short E Sump Base temperature sensor of compressor 3. Open or Short E High pressure sensor. Open or Short E Low pressure sensor. Open or Short E Oil balance temperature sensor. Open or Short E Suction temperature sensor. Open or Short E Main cooling solenoid valve opening error. E Protection control by sump sensor. E Reverse phase or phase open. E Self-diagnosis of oil solenoid valve. E Prohibition of operating when the high pressure of system is too low. E Power failure temporarily or zero crossing error. E Low current of CT sensor. Or compressor starting failure of inverter system. E Indoor unit stop by unidentified error from outdoor units. E Option switch setting error of outdoor unit. E Model mismatching of Indoor unit. E Communication error between remote controller and indoor unit. E Communication error between master and slave wired remote controller. E Communication packet error Baud rate error E Tracking failure error between wired remote controller and indoor unit. Wired remote controller E Two masters of wired remote controllers were installed in one COM2 communication line. E Indoor unit is not detected for synchronous control. E Communication error between centralized controller and interface module. E Communication error between DMS and centralized controller. E Communication error between SIM and power meter. E Communication error between interface module and indoor unit. E Communication error between interface module and outdoor unit. E The connected indoor units to ERV exceeded 16 units. COM 1 wiring E Room temperature sensor in the wired remote controller. Open or Short E Memory data error in the wired remote controller.
