

1: How to convert word to PDF file in iPhone, iPad – Best apps

Question: Q: Saving A Word Document on iPhone I received a Word document on my iPhone as an email attachment. I would like to save it so I can use it to send as an attachment in emails I send out.

The lack of a proper file system can be confusing, and something as simple as downloading a file can all the sudden become a daunting task. How do I download a file to my iPhone? Where do I download it to? Apple has made the lack of accessible file system a little easier to swallow over the past couple years, specifically with the expansion of iCloud services but also with the Files app, a front facing app for most files stored in iCloud. Apple has also opened things up to third-party applications. Dropbox is probably the most familiar name in the space. Google Drive is also a popular option, and for those users who have limited iCloud storage, these two services might be the best options to download files. They will be stored in the cloud and accessible from the device, and in some cases, users will be able to download them for offline access. In which case, they will be on the device itself as well. No matter what, files will have to be downloaded to a cloud service. It can be iCloud, Dropbox, Google Drive, or other similar services. On your iPhone or iPad, go to Safari and open the file you are trying to download. Tap on the Share button, which will bring up the Share sheet. From there, you will be able to enable the Dropbox extension. Now tap the Save button, or choose a different folder where to save the file, then tap Save. The file has now been saved to your Dropbox account and will be available for easy access across all your devices, such as your computer, your iPhone, iPad, etc. Downloading files from a password-protected website The steps mentioned above work great if the file you are trying to download is available publicly from a website. But things can get a little tricky if you are trying to download a file or document that is stored on a password-protected website. Here is how to use it to download a file from a password-protected site. Login to whatever website you need to use to download a file or document. Locate the file you want to download, and tap on it to load it. In the top right corner of the screen, tap on the upload button. Documents 5 will then let you change the file name, if necessary, and select where you want to download the file to. From Documents 5, you will then be able to move it to iCloud or Dropbox, or Google Drive, for example. You will also be able to share it via email. It makes downloading and moving files around a breeze. Because it can tie in to various cloud services, and let you access and move files between them, Documents 5 can be the central location for all your file handling needs. Although not as simple as a drag and drop gesture would be on a computer, As pointed out by ProllyWild in the comments section, Documents 5 can even let you move files around folders and cloud services by using a drag and drop gesture, making file handling almost as simple as it would be on a desktop computer. To move a file, simply tap and hold your finger on it, then drag it to your destination of choice. It can be a folder, or a cloud service such as iCloud, Dropbox, etc. Downloading files on iPhone or iPad is a pain No matter how good you are at getting this workflow down, it still feels like downloading files and documents from an iPhone or iPad is a giant pain in the butt. Maybe this will be part of a future software update, especially now that Apple is trying hard to pitch iPad as a work machine. As always, any questions or comments you may have are more than welcome.

2: How to Transfer Word Document to iPhone

Once it is on your phone you can tap the Word document in your email to view it then tap the Share icon and Open in Pages. If you edit the document and email it you will have the choice to send it as a Pages document, a Word document or a PDF file.

For example, the document may be lost if an error forces Word to close, if you experience a power interruption while you are editing, or if you close the document without saving changes. This article discusses six methods that you can use to try to recover the lost document. Unfortunately, some documents might not be recoverable. For example, if you have not saved the document at all, the whole document might be lost. If you have saved your document, you might lose only the changes that you made since the last time that you saved it. However, do not worry. Many documents can be partly or completely recovered. Because there are several versions of Microsoft Windows, the following steps may be different on your computer. If they are, see your product documentation to complete these steps. Also, because some of these methods include steps that require you to restart your computer. You may find it easier to follow the steps if you print this article first.

More Information Use these methods in the order in which they are presented to recover the lost document. If one of these methods is successful and you recover the lost document, you are finished and you do not have to follow any more steps.

Search for the original document The original document might not have been removed from the computer. Follow these steps to see whether you can find the document: Click Start, and then click Search. In the lower-left corner of the Windows Desktop Search pane, click [Click here to use Search Companion](#), if that option is listed. In the All or part of the file name box, type the name of the document that you want to find. In the Look in box, click My Computer, and then click Search. If the search details pane does not contain the document that you are looking for, you might have typed the file name incorrectly or the document might have a different name. Follow these steps to search for all Word documents: In the Search Companion pane, click Start a new search. Click All files and folders, and then copy and paste or type the following text into the All or part of the file name: To view the Recycle Bin and restore the document if it is there, follow these steps: On the desktop, double-click Recycle Bin. On the View menu, click Details. Scroll through the files. If you find the document that you are looking for, right-click the document, and then click Restore to return the document to its original location. Note Microsoft currently does not provide any utilities to recover documents that have been deleted, or emptied from the Recycle Bin. However, some third-party utilities to recover deleted documents may be available on the Internet.

Search for Word backup files If the previous method did not work for you, the main document might be gone. But there might be a backup copy of the document available. The Always create backup copy setting in Word creates backup copies of every document that you create. First, follow one of these steps to see whether the Always create backup copy setting is enabled: If you use Microsoft Office Word Scroll through the headings until you find the Save section, which is close to the end of the list. If the Always create backup copy setting, located in the Save section, is selected, Word created a backup copy of the document. On the Tools menu, click Options. The Always create backup copy setting is located on the Save tab. If the Always create backup copy setting is selected, Word created a backup copy of the document. Then, if the Always create backup copy setting is not selected, go to method 3: Locate the folder in which you last saved the missing document. Look for files that have the. If there are no files that have the. In the All or part of the file name: If you find any files that are named "Backup of" followed by the name of the missing document, follow these steps to open the backup copy: Perform one of the following actions: If you use Word Force Word to try to recover a file If Word did not create a backup copy of the document, you might be able to use the AutoRecover feature to recover the lost document. Note The AutoRecover feature in Word performs an emergency backup of open documents when an error occurs. Some errors can interfere with creating an AutoRecover file. The AutoRecover feature is not a substitute for saving the document. If the Save AutoRecover information every [] minutes option is selected, Word creates a temporary AutoRecover file that includes the latest changes in the document. Every time that Word starts, it searches for AutoRecover files. If Word finds any AutoRecover files, it displays the

files that it finds in the Document Recovery task pane. First, to see whether the Save AutoRecover information every [] minutes option is selected, use one of the following steps: The Save AutoRecover information every [] minutes option is in the Save documents section. Click Options on the Tools menu. The Save AutoRecover information every [] minutes option is located on the Save tab. Then, if the Save AutoRecover information every [] minutes option is selected, try closing Word and reopening it. If the AutoRecover task pane appears on the left side of the screen, click the lost document to restore it. If the Save AutoRecover information every [] minutes option is not selected, you can try to force Word to recover the document. Use one of the following steps to force Word to recover the document: Click the Microsoft Office Button, click Open, select the Word document, click the down arrow on the Open button in the lower-right corner of the Open screen, and then click Open and Repair. Click Open on the File menu, select the Word document, click the down arrow on the Open button in the lower-right corner of the Open screen, and then click Open and Repair. Manually recover AutoRecover files If Word could not open the AutoRecover file automatically or through the Open and Repair option, the AutoRecover file might be saved in a nondefault location. You might have to look for the AutoRecover file manually. Follow these steps to search for AutoRecover files manually: If a file that is named DocumentName. Follow one of these steps: Click the Microsoft Office Button, and then click Open. Click Open on the File menu. Locate and select the. If this occurs, perform one of the following actions: In Word , double-click the file in the Document Recovery task pane, click the Microsoft Office Button, click Save As, and then save the document as a. In Word , double-click the file in the Document Recovery task pane, click Save As on the File menu, and then save the document as a. Note If an AutoRecover file in the Recovery pane does not open correctly, go to the "How to troubleshoot damaged documents" section for more information about how to open damaged files. Search for temporary files If you could not find an AutoRecover file or a backup of the lost document, you might be able to recover the document from your temporary files. To search for the lost document in your temporary files, follow these steps: Click the two chevrons next to When was it modified?. Click Specify dates, and then type the from and to dates to include the time period since you last opened the file. On the View menu, click Arrange Icons by, and then click Modified. Scroll through the files, searching for files that match the last dates and times that you edited the document. If you find the document that you are looking for, go to the "How to troubleshoot damaged documents" section for more information about how to recover information from the document. These files might not appear in the list of temporary files that you found in method 5: How to troubleshoot damaged documents Word automatically tries to recover a damaged document if it detects a problem with the document. You can also force Word to try to recover a document when you open it. Follow these steps to force Word to recover the document: Follow one of these steps, depending on the version of Word that you use: In the Open dialog box, select the document. Click the down arrow on the Open button in the lower-right corner of the Open screen, and then click Open and Repair. Search technical support information and self-help tools for Microsoft products. View product-specific frequently asked questions and support highlights. If you continue to have problems after you use these resources, you might want to contact Support:

3: How can I save an image in word as a jpeg. - Microsoft Community

Sync Word to iPhone with latest iTunes iTunes has updated to version However, the guide on Apple Support webpage still sticks to the old iTunes. If you have downloaded the newest version, you will find the tutorial not applicable any longer. Therefore, this guide is specially made for you about how to put Word documents on iPhone using iTunes Get the latest iTunes by upgrading or downloading from its website. Then scroll down to the bottom of the window. By doing so, you can also achieve what you want. Nevertheless, comparing to AirMore, this method has several shortcomings you need to be aware of. The process is more complex. A USB cable is required. You need to install a desktop client on your computer. You have to select the corresponding apps when you transfer various kinds of documents. Actually, you can also adopt Gmail or iCloud to send Word documents to iPhone. But in general, these three methods introduced in this article are the most popular ones. Without many efforts or operations, all the documents will be transferred into your iPhone. Last updated on January 4, Leave a Comment.

4: How to save a Pages document as a Word document

If you've received a document, such as a PDF, Word, or RTF file via email, text message, or other sharing method, or if you're viewing it on the Web, tap the document on your iPhone to open a preview.

Which means you can use it a bit like you use Finder on your Mac. Create different folders for saving and organizing different kinds of things like photos, PDFs, text files and more. But now Files app is here, you can create different folders for saving inspiration photos, PDFs for receipts and more. Use Save to Files Extension Step 1: This will bring up the Share sheet. From the bottom row, tap on Save to Files. By default, this will be On my iPad and iCloud Drive. Select the folder where you want to save this file. Then tap on Add. The file will be saved to the location. Images on a web page in Safari are a prime example. In times like these, a simple drag and drop will do. First, open the Files app on your iPad in Split View more about that here. Then, tap and hold on the file you want to add to the files app. In a second, it will lift up from the screen and a small preview will be attached below where your finger is. Swipe to the Files app and drop the file in the folder you want to add it to. If the file is in a compatible format like images, PDF, text file , it will be saved to the folder in Files app. Tap and hold on a file and select Tags to get started. What is your favorite new feature in Files app? How will you be using the app to organize your files and folders? Share with us in the comments below.

5: Saving A Word Document on iPhone - Apple Community

Early versions of Apple's iPhone allowed you to view Word documents, but not save them to your phone. Now, however, a variety of document-editing applications are available that allow you to view, create and edit Microsoft Office files. Once an application has been installed, there are several methods of transferring your Word files to the iPhone.

Can the iPad be used to type documents? Can it open and save Microsoft Office files? Can it open and save PDF files? The iPad most certainly can be used to type documents. Although Apple subsequently has released versions of these apps for the iPhone and iPod touch, the small displays make the software much less convenient for more than basic review and quick edits of documents, even with the assorted zoom functionality. The iPhone and iPod touch models also can be used with keyboards, but when combined with the larger display, an external keyboard makes it possible to comfortably compose full documents on the iPad. However, it also is worth noting that because iOS software commonly is designed for use without a keyboard, some apps may be awkward or "clunky" when used with a keyboard and allow some actions from the keyboard whereas others will require touching the screen. Those used to typing on a Mac and using lots of key commands may be disappointed by the iPad experience. For those who use Microsoft Office on a Mac or Windows PC, and assuming full crossplatform compatibility and advanced features are important, the official software is the best choice by far. Originally, Office for iPad was free to download, but the free version only allowed you to read Word, Excel, and PowerPoint files. Editing files or creating new ones required an Office subscription. However, on November 6, , Microsoft relaxed this requirement and made basic editing free for consumers, with more advanced business features still requiring Office . Starting today November 6, , people can create and edit Office content on iPhones, iPads, and soon, Android tablets using Office apps without an Office subscription. Of course Office subscribers will continue to benefit from the full Office experience across devices with advanced editing and collaboration capabilities, unlimited OneDrive storage, Dropbox integration and a number of other benefits. In addition to helpful reviews from Macworld and ArsTechnica , you also may find this demo video from Microsoft worthwhile to see the software in action: Originally only Pages supported saving documents in Word format, but Numbers and Keynote did not support saving documents in Excel or PowerPoint, respectively. Thankfully, this subsequently has changed and Numbers and Keynote now both can save files in the equivalent Microsoft format. More recent Apple marketing copy shamelessly declares that these apps "now work even better with Microsoft Word, Excel and PowerPoint. Always optimistic marketing copy aside, the straightforward lists of exactly what works, may work, and does not work definitely is welcomed and should help users have realistic expectations. Likewise, from the extensive number of "partially" supported and unsupported features when converting between formats, it is clear that experiences still will continue to vary significantly. Although the professional opinions below are referring to the original release of the iWork suite for iPad, they still do an excellent job demonstrating the range of possible translation outcomes using the official Apple solutions. When I downloaded the template for the Word document I am currently using for this review, the iPad automatically asked if I wanted to convert it to a Pages doc. When I did, I was immediately using a doc that looked exactly like my original Word document. This is a serious content creation app that should help the iPad compete with laptops and can import Microsoft Office files. In one case, the exported Word file had misaligned text. When I then tried exporting the document as a PDF file, it was unreadable. In addition to the official solutions, two other translation apps include Documents To Go from DataViz , which has been providing Mac format translation software for decades, and newcomer QuickOffice , which now is owned by Google. More recently, Apple released newer "dumbed down" versions of Pages, Numbers, and Keynote in an effort to bring more parity between the Mac and iOS versions. Although this may have been well meaning -- the backlash from consumers was swift and substantial -- and Apple promised to bring back at least some of the features removed or broken by the new release. Since then, some features have been added back, but the software remains a work in progress. When using any version of Pages, Numbers, or Keynote for the Mac, changes typically are more minor than those converting between Microsoft applications and their Apple equivalent, but

some of these changes still are quite significant. Likewise, removing the comments in a presentation could range from frustrating to devastating if you were planning to review them prior to your presentation and only then discovered that they were gone. As Apple makes the applications for both systems, and the company no doubt wants to encourage sales of both Macs and iPads -- or at least encourage migration from the Mac to the iPad -- one certainly would hope that compatibility will continue to improve as long as Apple views Mac compatibility as important for iWork. It certainly appears that the company continues to work on this goal. Compatibility of the original version definitely was overstated, as the below journalists note. If you are planning on buying an iPad to be a portable editing device for your iWork content -- think twice. The Apple Discussion boards are all aflutter with teachers and professors who hoped they could leave their laptops in the office and only take their new iPads to the lecture hall. This is not the case. Although Apple has branded the programs the same as the versions you can buy for your Mac, this is where the similarity ends. Formatting is lost in Pages so formulas and footnotes disappear in Keynote transitions and builds go away. It is not as if they are temporarily suspended while on the iPad they are gone so when and if you save back to your Mac they are no longer there. Thankfully, this previously permanent file change issue has been rectified. You now will be "prompted whether you would like to open the original version or to create a copy, and changes made to the content or document layout are listed for your review. As always, keep a backup of a file before attempting to convert between any formats. It may be of interest, too. With the official Microsoft Office for iPad software, when combined with an Office subscription and a physical keyboard, it is simple to read, edit, and create Word documents, Excel spreadsheets, and PowerPoint presentations, generally even in a collaborative environment where documents will be sent back and forth between multiple parties for revision. Translation efforts are improving, but as they always have been since the dawn of time, work best for simple documents.

6: How to add Word, Excel and PowerPoint documents to iPhone or iPad?

With Office for iPhone, your files are saved automatically. This is called AutoSave. And you can see that AutoSave is on when this button has 2 arrows. You can also see it's on when you tap the button. With AutoSave on, Excel, PowerPoint and Word save frequently for you, so you don't have to worry about it.

7: Saving Excel or Word Files on Your iPhone | It Still Works

As of iOS 8, the iPhone doesn't come with any apps that can open Microsoft Word documents, but Microsoft has an official, free Word app in the App Store. If you have an Office account, the app offers more features, but you don't need a subscription to view and make basic changes to a document.

8: How to Save Documents from Anywhere to Files App on iPhone and iPad in iOS 11

How to save email attachments to Dropbox, Google Drive, OneDrive or enterprise storage on iPhone or iPad Thanks to document provider extensions, though, you can also save to Dropbox, Google Drive, OneDrive, and other storage services.

9: How to Save a Word Document as a Picture | HowStuffWorks

Hi my husband has an iPhone 6s Plus and it is updated, but since the 2nd last update his signature has not been working. It will come up just fine but once he sends off the document it gets back unsigned.
