

1: Pakistan Urdu School - Wikipedia

Archivist is a school management system which includes hassle free fee management software that helps you you to go paperless by reducing 90% of your manual work which saves your administrative staff with a lot of valuable time.

The School Academic Philosophy and Curriculum At The Smart School, we offer the best learning environments to ensure that your child becomes confident, articulate, aware of their surroundings, and actively engaged with the world around them. We want our students to achieve their maximum academic and social potential, to be engaged and responsive learners and to be, in other words, the best that they can be. We believe that the education we provide enables our students to respond positively to the opportunities and challenges of the rapidly changing world. Today, our students must be prepared to deal with economic changes including the continued globalization and the rapid expansion of communication technologies. Our education must also reaffirm our commitment to the traditional values – to the virtues of truth, justice, honesty, trust and a sense of duty. For all school years, we provide a knowledge and skills-based curriculum framework founded on but not entirely composed of the aims and objectives of the National Curriculum for the United Kingdom. Our curriculum, therefore, shares common principles and builds a sound foundation for future learning. Curriculum The Smart School curriculum seeks to raise the achievement levels of all students and to ensure that the quality of teaching and learning in our schools is of the highest standard. The rest of the subjects remain the same. Project work is carried out in the schools to ensure hands-on experiences for the students. Student-centred learning is the hallmark of education at TSS. This ensures that all teachers and students benefit from the programmes prepared by experienced teachers and curriculum developers. The web-based system provides a single, common infrastructure to manage teaching, learning and training initiatives at The Smart School. To achieve this goal, our software will deliver e-learning with a secure login that will give users access to courses, multiple sessions and progress tracking through various tools. Additionally, the system will allow teachers and administrators to manage, keep track of, and evaluate all coursework. This is a combination of web-based e-learning and traditional teaching methods. By using the relevant Information and Communication Technology ICT teaching and learning tools, computer labs, and web portals, the combination of e-learning and traditional teaching will assist every student in achieving their goals in the classroom. E-learning will assist The Smart School teachers and students in meeting subject attainment targets. It enables every student to set their own pace of study. It is interactive and the systems allow active student participation. It enables topics to be shown in audio and video sequences. It fosters student collaboration, encourages creativity and develops research skills. Students may access the web portal at any time through the Internet. Students may use the web for study at school and at home.

Registan , Sher-Dor Madrasa in Samarkand In the medieval Islamic world, an elementary school was known as a maktab, which dates back to at least the 10th century. He wrote that children can learn better if taught in classes instead of individual tuition from private tutors , and he gave a number of reasons for why this is the case, citing the value of competition and emulation among pupils, as well as the usefulness of group discussions and debates. He writes that children after the age of 14 should be allowed to choose and specialise in subjects they have an interest in, whether it was reading, manual skills, literature, preaching, medicine , geometry , trade and commerce , craftsmanship , or any other subject or profession they would be interested in pursuing for a future career. Ijazah Courtyard of the Al-Azhar Mosque and University in Cairo , Egypt During its formative period, the term madrasah referred to a higher education institution, whose curriculum initially included only the "religious sciences", whilst philosophy and the secular sciences were often excluded. Some madaris further extended their curriculum to history , politics , ethics , music , metaphysics , medicine , astronomy and chemistry. Sharia and Fiqh Madaris were largely centred on the study of fiqh Islamic jurisprudence. The mufti professor of legal opinions took this question, studied it, researched it intensively in the sacred scriptures, in order to find a solution to it. Bimaristan Though Islamic medicine was most often taught at the bimaristan teaching hospitals, there were also several medical madaris dedicated to the teaching of medicine. For example, of the madrasa colleges in 15th century Damascus, three of them were medical schools. Shanks and Dawshe Al-Kalai point out that, during this era, physician licensure became mandatory in the Abbasid Caliphate. For more information, see Islamic university disambiguation. Scholars like Arnold H. Green and Seyyed Hossein Nasr have argued that, starting in the 10th century, some medieval Islamic madaris indeed became universities. However, the classification of madaris as "universities" is disputed on the question of understanding of each institution on its own terms. In a sense, the madrasa resembles a university college in that it has most of the features of a university, but lacks the corporate element. Toby Huff summarises the difference as follows: From a structural and legal point of view, the madrasa and the university were contrasting types. Whereas the madrasa was a pious endowment under the law of religious and charitable foundations waqf , the universities of Europe were legally autonomous corporate entities that had many legal rights and privileges. These included the capacity to make their own internal rules and regulations, the right to buy and sell property, to have legal representation in various forums, to make contracts, to sue and be sued. In central and eastern Islamic lands, the view that the madrasa, as a charitable endowment, will remain under the control of the donor and their descendent , resulted in a "spurt" of establishment of madaris in the 11th and 12th centuries. However, in Western Islamic lands, where the Maliki views prohibited donors from controlling their endowment, madaris were not as popular. Unlike the corporate designation of Western institutions of higher learning, the waqf designation seemed to have led to the exclusion of non-orthodox religious subjects such a philosophy and natural science from the curricula. George Makdisi, who has published most extensively on the topic [62] concludes in his comparison between the two institutions: Thus the university, as a form of social organization, was peculiar to medieval Europe. Later, it was exported to all parts of the world, including the Muslim East; and it has remained with us down to the present day. But back in the middle ages, outside of Europe, there was nothing anything quite like it anywhere. Makdisi has listed eighteen such parallels in terminology which can be traced back to their roots in Islamic education. Some of the practices now common in modern universities which Makdisi and Goddard trace back to an Islamic root include "practices such as delivering inaugural lectures, wearing academic robes, obtaining doctorates by defending a thesis, and even the idea of academic freedom are also modelled on Islamic custom. According to Saliba, Madrasahs "were fully protected from interference in their curriculum by the very endowments that established them in the first place.

4: School Management System

School Management System provides your School a Complete Solution to Manage your school. It's a complete hosted software solution, that offers.

The medium of instruction is English for all classes. The school owes its existence to Mr. Haji Asghar Ali, Mr. Abdul Rasool Malik, Mr. Sayed Akber Ali, Dr. Mehitapwala and those in business and commercial community in Bahrain who provided monetary support in establishing the school. The present strength of the school is over students and staff members. This institution not only emphasizes on academic excellence but also on co-curricular and extracurricular activities. The School has a team of dedicated teachers under the supervision of the school management and able guidance of the Board of Trustees. The school emphasizes on academic grooming and moral upbringing of the students. The school has separate classes for boys and girls. The school caters to the educational needs of all nationalities. All these attributes make Pakistan Urdu School an ideal institution, an institution committed to the noble cause of imparting quality education on a non-profit basis and any surplus earned are reinvested on various developments of the school facilities. Our philosophy of education has always been meeting the needs of the individual child. Children acquire skills and knowledge easily if we can make the surrounding stimulating and purposeful. A pivotal role of education lies in shaping the personality of a child into a healthy mind and happy soul, who is not only equipped with 21st century skills and the aptitude required for academic excellence but helping them face the challenges of life in a balanced and harmonious way. Therefore, we believe is that the system of education should work as a catalyst in making each child a balanced human being having his core strengths embedded in the learning experiences emanating from our rich socio-cultural roots in Bahrain. In this pursuit of excellence, we appreciate if the parent fraternity continues to support the school in every aspect. But we would exhort the students to be always modest, humble and disciplined, while being ready to expand the horizons of their knowledge and skills by dreaming big and working hard. However over the years, the school has opened its door to all nationalities and the medium of instructions is English. The school strives to give Education, which is value for money.

5: School Management Software – School Management Software and School Management System

School ERP offered at ZeroERP ensures that all information needs to be stored electronically and school management system is a trouble-free process. Along with school management software it provides a school app with multi lingual environment with current support to English,Hindi,Urdu,Marathi,Spanish as it is designed for multiple languages.

School Management System 2. New reliable and fast school management software with the great customer support. Standard Edition is free. Do not miss this unique opportunity. Save! School Management System Project: This is a medium sized project for managing educational institutes. Current version of this project includes Student Management System, some forms for managing Staff, Batches etc. We are continuously working on this project and we will update the latest versions when available. You can download the source code and use this as a template. Even though we have implemented many features, you can extend it by adding several new features to it. Feel free to write to us if you have any questions or if you have suggestions for improvement. The term has some overlap with the concepts of content management systems. It is often viewed as a component of enterprise content management ECM systems and related to digital asset management, document imaging, workflow systems and records management systems. School Management Software Demo: The design of Advanta Rapid is simple and user-friendly, so that all types of users can use it easily and with minimum effort. This is the only one software that you need for managing your whole institute. We can also add more modules and customize the existing ones according to your requirement. Advanta Rapid is highly suitable. The world of education is changing, so are the ways of imparting them. Information Technology has come forward to bring this refreshing change and College Management Software joined hands with IT to come up with unique software for the entire operation and management of college online. It is also useful for schools, universities and training institutes. It fulfills all the entire administrative and academic requirements. Every company has document records, whether it is paper based or electronic files. Dokmee can help you organize, secure and manage those documents. Here are some of the industries that we serve: Financial Transportation and more! Class Management Software: NetSupport School is a class leading training software solution, providing Teachers with the ability to instruct, monitor and interact with their Students either individually, as a pre-defined group or to the overall class. A virtual learning environment VLE is a system designed to support teaching and learning in an educational setting, as distinct from a Managed Learning Environment, MLE where the focus is on management. New features in these systems include wikis, blogs, RSS and 3D virtual learning spaces. While originally created for distance education, VLEs are now most often used to supplement traditional face to face classroom activities, commonly known as Blended Learning. Home Inventory Software – keep track of your home inventory with unlimited pictures per item, history of documents, repairs, descriptions, appraisals and more. Very popular home inventory manager. Now includes an optional Report Designer module – enabling you to create your own customized inventory reports. With this home inventory software program you can track all of your household items. Keep track of the location of the item, owner, heir, insurance, description, depreciation schedules and more. This version allows you to track up to gigabytes of information and you can easily track multiple homes or properties. Each home can have up to GB of information stored. Download the free trial version to see for yourself how easy it is to keep track of your personal home inventory. TOTAL business management – You no longer have to choose between affordable point packages and expensive software designed for big business. ASI is a Software Development Company specializing in providing custom solutions for small businesses. We strive to build solutions to your specific needs to get the job done right the first time. We pay special attention to the ease of use and utilize the latest in technology. It is a comprehensive software suite consisting of integrated modules for various aspects of hotel management. This class of software is often referred to as Property Management System in the industry. In our lodging software all modules are tightly integrated and all hotel programs are included in one price, meaning all modules are included at no additional cost. Our Motel management software is developed for Microsoft Windows operating system. Web based School Management System: During this many of us have encountered various

challenges. In this article we are giving tips on on line schooling. Schooling round the clock around the globe is exciting but what to do for it. The first question is can it work online. It is important to understand our infrastructure and the users before we finalise anything on this account. For some countries the idea of online schooling may work with fully online system but with most countries where Internet facility is still at a growing phase the idea may end up is a dream far off. For this the concept of an intranet based system that works offline and can synchronise with online interface is something that works. One Admin user is already there once db is installed with user name admin and password admin. These functionalities can not be done by simple user that registers. Password encryption and decryption has been used in project. Its very simple project where in all the events of all forms has been handled in Globals. All DB interactions are in this file only. Award-winning contact management software to help you track your contacts, sales management, schedules and events. Supports multiple users on a network and Office ! Contact Plus Professional will organize your contact management, calendar and document management needs easier than ever before and save you time doing it. And by being organized you can establish better relationships with your customers and prospects. Contact Plus Professional can dial globally using Skype. It also now interfaces with the Outlook contacts and calendar appointments. Take your contacts and calendar on the road with you! A demo is now available along with some video tutorials.

6: Download cleantouch urdu english dictionary for free (Windows)

School Management System aimed to provide complete computerized operations in any school. Students can be managed through Bio-Data (GR No. Allotment), Attendance, Fees, Examination, Leaving modules. Staff records can be computerized by Bio-Data > Staff Salary > Leaving modules.

Add Reply Introduction It is mandated in the Constitution of Pakistan to provide free and compulsory education to all children between the ages of years and enhance adult literacy. With the 18th constitutional amendment the concurrent list which comprised of 47 subjects was abolished and these subjects, including education, were transferred to federating units as a move towards provincial autonomy. The year is important in the context that it marks the deadline for the participants of Dakar declaration Education For All [EFA] commitment including Pakistan. What is Education System? The system of education includes all institutions that are involved in delivering formal education public and private, for-profit and nonprofit, onsite or virtual instruction and their faculties, students, physical infrastructure, resources and rules. In a broader definition the system also includes the institutions that are directly involved in financing, managing, operating or regulating such institutions like government ministries and regulatory bodies, central testing organizations, textbook boards and accreditation boards. The rules and regulations that guide the individual and institutional interactions within the set up are also part of the education system. Education system of Pakistan: The education system of Pakistan is comprised of , institutions and is facilitating 41,, students with the help of 1,, teachers. The system includes , public institutions and 80, private institutions. Analysis of education system in Pakistan Pakistan has expressed its commitment to promote education and literacy in the country by education policies at domestic level and getting involved into international commitments on education. In this regard national education policies are the visions which suggest strategies to increase literacy rate, capacity building, and enhance facilities in the schools and educational institutes. Problems of access, quality, infrastructure and inequality of opportunity, remain endemic. The MDGs have laid down two goals for education sector: The goal 2 of MDGs is to achieve Universal Primary Education UPE and by , children everywhere, boys and girls alike, will be able to complete a full course of primary schooling. By the year the enrolment statistics show an increase in the enrolment of students of the age of year while dropout rate decreased. But the need for increasing enrolment of students remains high to achieve MDGs target. It is aimed at eliminating gender disparity in primary and secondary education by and in all levels of education not later than There is a stark disparity between male and female literacy rates. Provinces reported the same gender disparity. EFA Review Report October outlines that despite repeated policy commitments, primary education in Pakistan is lagging behind in achieving its target of universal primary education. Currently the primary gross enrolment rate stands at Of the estimated total primary school going Economic Survey of Pakistan confirms that during the year literacy remained much higher in urban areas than in rural areas and higher among males. The goal under Vision is one curriculum and one national examination system under state responsibility. The strategies charted out to achieve the goal included: The issues lead to the comprehension of the problems which are faced in the development of education system and promotion of literacy. The study outlines seven major problems such as: However it seems that it will not be able to achieve these international commitments because of financial management issues and constraints to achieve the MDGs and EFA goals. It is important to realize that the problems which hinder the provision of education are not just due to issues of management by government but some of them are deeply rooted in the social and cultural orientation of the people. Overcoming the latter is difficult and would require a change in attitude of the people, until then universal primary education is difficult to achieve. Major factors that hinder enrolment rates of girls include poverty, cultural constraints, illiteracy of parents and parental concerns about safety and mobility of their daughters. The economic cost is higher in private schools, but these are located in richer settlements only. The paradox is that private schools are better but not everywhere and government schools ensure equitable access but do not provide quality education. The militants targeted schools and students; several educational institutions were blown up, teachers and students were killed in Balochistan, KPK and FATA. This may have to contribute not

as much as other factors, but this remains an important factor. Sufficient attention has not been paid to the technical and vocational education in Pakistan. The number of technical and vocational training institutes is not sufficient and many are deprived of infrastructure, teachers and tools for training. The population of a state is one of the main elements of its national power. It can become an asset once it is skilled. Unskilled population means more jobless people in the country, which affects the national development negatively. Therefore, technical education needs priority handling by the government. Poverty, law and order situation, natural disasters, budgetary constraints, lack of access, poor quality, equity, and governance have also contributed in less enrolments. An analysis of the issues and problems suggest that: The official data shows the allocation of funds for educational projects but there is no mechanism which ensures the proper expenditure of those funds on education. The existing infrastructure is not being properly utilized in several parts of the country. There are various challenges that include expertise, institutional and capacity issues, forging national cohesion, uniform standards for textbook development, and quality assurance. The faculty hiring process is historically known to be politicized. As a result teachers are not regular and their time at school is not as productive as it would be with a well-trained teacher. Inside schools there are challenges which include shortage of teachers, teacher absenteeism, missing basic facilities and lack of friendly environment. Out of school challenges include shortage of schools, distance especially for females, insecurity, poverty, cultural norms, parents are reluctant or parents lack awareness. Solutions There is a need for implementation of national education policy and vision education goals. An analysis of education policy suggests that at the policy level there are several admirable ideas, but practically there are some shortcomings also. It may not be possible for the government at the moment to implement uniform education system in the country, but a uniform curriculum can be introduced in educational institutes of the country. This will provide equal opportunity to the students of rural areas to compete with students of urban areas in the job market. Since majority of Pakistani population resides in rural areas and the access to education is a major problem for them, it seems feasible that a balanced approach for formal and informal education be adopted. Government as well as non-government sector should work together to promote education in rural areas. The government should take measures to get school buildings vacated which are occupied by feudal lords of Sindh, Balochistan and Punjab. Efforts should be made to ensure that proper education is provided in those schools. The federal government is paying attention to the vocational and technical training, but it is important to make the already existing vocational and technical training centres more efficient so that skilled youth could be produced. Since education is a provincial subject, the provincial education secretariats need to be strengthened. The provincial education departments need to work out financial resources required for realising the compliance of Article A. Special grants can be provided to the provinces where the literacy rate is low. Pakistan is not the only country which is facing challenges regarding promotion of literacy and meeting EFA and MDGs commitments. Education remains a subject which is paid least attention in the whole South Asian region. UNDP report suggests that there has been an improvement in other elements of human development such as life expectancy, per capita income and human development index value in past 3 years ; but there has been no progress in the number of schooling years. The expected average for years of schooling in was In the year the expected average of number of years increased to Regional cooperation mechanism can also be developed to promote literacy in South Asian region. Sharing success stories, making country-specific modifications and their implementation can generate positive results. Recommendations Technical education should be made a part of secondary education. Classes for carpentry, electrical, and other technical education must be included in the curriculum. Providing economic incentives to the students may encourage the parents to send their children to school and may help in reducing the dropout ratio. Local government system is helpful in promoting education and literacy in the country. In local government system the funds for education would be spent on a need basis by the locality. Corruption in education departments is one of the factors for the poor literacy in the country. An effective monitoring system is needed in education departments. For any system to work it is imperative that relevant structures are developed. Legislation and structure should be framed to plan for the promotion of education in the country. After the 18th amendment the education has become a provincial subject, therefore, the provinces should form legislations and design educational policies which ensure quality education.

Unemployment of educated men and women is a major concern for Pakistan. There should be career counselling of the pupils in schools so that they have an understanding of job market and they can develop their skills accordingly. Counselling of parents is required, so that they can choose a career for their child which is market friendly. There are two approaches to acquiring education: First, which is being followed by many in Pakistan is to get education to earn bread and butter. The second approach is to get education for the sake of personal development and learning. This approach is followed by affluent and economically stable people who send their children to private schools and abroad for education. The problem arises when non-affluent families send their children to private schools, and universities. This aspiration for sending children for higher education is wrong, because the country does not need managers and officers only. There are several other jobs where people are needed. Similarly, to make the youth of the country an asset, attention should also be paid to vocational and technical training. Why, When, and How?
