

SCIENCE IN GENERAL EDUCATION AT THE OKLAHOMA STATE

COLLEGES pdf

1: Undergraduate Programs | College Of Education, Health and Aviation | Oklahoma State University

The university's general education requirements include: English Composition - 6 hours (ENGL AND or approved substitutes) required. Approved substitutions are ENGL or for and ENGL , , or for ENGL

In November, the member Draft Review Team submitted their first review of the standards providing input on clarity, grade-level appropriateness, alignment to the K12 CS Framework concepts and practices, and coherent progressions. The Writing Team reviewed and incorporated this feedback to produce a set of standards were available for a one-month public comment period ending January 8, How are public comments utilized in the standards development process? Public comments inform the Writing Team in the areas of clarity, grade-level appropriateness, and general opportunities to improve the standards. While every review is considered, common themes often arise and are given particularly careful consideration. Our hope is that respondents to the public comment survey will see adjustments based on their thoughtful review and recommendations. Are the standards written for all Oklahoma students? The Oklahoma State Department of Education and the members of the Writing and Draft Review Teams strive to ensure the new standards communicate a vision for Computer Science education that prepares all students for a future that is increasingly technological. We believe defining clear, attainable, yet ambitious learning standards for Computer Science sets a worthwhile goal for our state as we work to ensure that any child might pursue a career in coding, engineering, or any number of pathways that are strengthened by computational thinking. When will these standards be officially adopted? They are official as of April 30, When will these standards be implemented in Oklahoma schools? Oklahoma schools are encouraged to begin implementation during the school year. Many support structures and professional development opportunities will be provided beginning in the same school year to support a full implementation by the school year. Are all schools required to implement these standards? While Computer Science courses are not required for all schools or students in Oklahoma, it is our hope that schools who offer any form of computer technology courses will begin to adapt those courses utilizing these standards beginning in the school year. Existing courses such as Computer Science and Computer Programming will be expected to use the standards and much more support will be provided after the standards adoption process is complete. What are Levels 1 and 2, and what do they mean? The development of high school computer science standards presents a complex challenge as the current course offerings across Oklahoma schools is quite diverse. The high school writing team elected to create Level 1 standards that detail the key knowledge, skills, and abilities all high school students should have as they build competency with the computer science concepts. These Level 1 standards are likely addressed in a Computer Science 1 and 2 sequence. The Level 2 standards provide a pathway for greater specialization that may be useful for those students who hope to pursue Computer Science as a certification area or potential minor or major at the collegiate level. Last updated on August 10,

2: College Catalog and Degree Information - Western Oklahoma State College | Altus, OK

Oklahoma State University is committed to producing graduates who have a depth of knowledge in their major fields of study and a breadth of general knowledge to address issues in a complex society.
