2: Series 6 Exam Prep - How to Pass The Series 6 Exam

Series #7 Cheat Sheet Explained These workbooks are for classroom participants. If you are in one of the live training classes that I conduct, you would have been given the password to access the following.

A little practice with this study technique will pay great dividends. Most people who take the Series 6 report one to three questions requiring the use of a calculator, so there are certainly a few math questions in the test. The testing center will loan you a calculator for use in the exam, along with pencils and scratch paper. Memorization should not be your primary study technique. From interviews with those who have taken the exam, the following formulas are those most frequently reported as requiring the use of a calculator: Municipal bonds tend to be attractive to those in the higher tax brackets. One of the professions that is associated with higher tax brackets is the medical profession. To remember which formula to use, ask the doctor "€" the MD, that is. When the question provides the municipal yield: Many people report that the questions regarding mutual fund pricing are "word" questions rather than math questions. An example of this is: The customer is confused and asks how this is computed. The RR should respond that: The sales charge is calculated as a percentage of the NAV. The sales charge is the reciprocal of the NAV. The sales charge is calculated as a percentage of the ask. The sales charge depends on the demand in the marketplace. Yes, the sales charge is calculated as a percentage of the ask price. But this also gives us an opportunity to illustrate another test-taking technique. When two of the answers for an A, B,C, D question are exactly opposite, you can generally eliminate the others. In this instance, we could have immediately eliminated choices B and D. Then, of course, one must recognize the formula. Use the "true or false" method in the process of elimination. Try each numbered response by asking "true or false? If the "wrong" answer is in one of the lettered choices, eliminate that choice. Then, compare the remaining choices to determine whether they are both correct. In most cases, they will be. Those who write the exam use the Roman numeral format when they want the candidate to find more than one choice. Which of the following is included in computing the expense ratio for a mutual fund?

As you begin your study and preparation for the Series 6, be aware of two things: What securities a Series 6 qualifies a candidate to sell The relative importance of the topics that make up the exam. Who needs the Series 6? The Series 6 Exam The Series 6 exam underwent a major revision that became effective November 30, However, the changes to the examination are not primarily in subject matter; they are more structural. One, the number of questions allocated to various topics has changed. The exam is now more heavily oriented toward RR interactions with customers. Two, the exam is now divided into six topical sections rather than four. The exam must still be completed within minutes and still contains questions. Scratch paper, pencils and calculators are loaned to candidates at the testing center. Exam Topics The Series 6 exam will be broken up into the following questions: Securities and Tax Regulations - 23 Questions 3. Marketing, Prospecting and Sales Presentations - 18 Questions 4. Evaluation of Customers - 13 Questions 5. Opening and Servicing Customer Accounts - 12 Questions As you can see, Sections 3, 4 and 6 are directly related to the interaction between the RR and the customer. What does this mean for Series 6 exam candidates? Focus your attention on the topic areas that count the most. Exam Time Management Because there are questions on the exam and minutes to complete them, candidates have 1. Therefore, candidates should carefully budget their time. There are techniques that can help you pass the test without the stress. Flag the Hard Questions Series 6 candidates will normally encounter several questions on the exam that are long and wordy. These are situation-type questions and can take quite a bit of time to work through and answer. Although it is easy to get wrapped up in these questions, you should remember that the simple questions count just as much as those that are long and complex. A good strategy, therefore, might be to flag a question - the computer program at your testing center will allow you to do this - that will take more time. Choose the questions that you flag carefully: Follow the Bell Curve Those who have recently taken the exam report that the structure of the questions is a "bell curve. The level of difficulty increases until one is past the midway point, then drops off steadily until the end. Easier questions will be on the way. If this also happens to you, finish the exam, wait for the congratulatory message, smile and go on about your life! If you must guess, your first guess is usually the best. Sharpen Your Skills To help increase your speed in answering questions, do many practice questions. The Tools When you go to the testing center, be sure to arrive early. You will normally only need to use the calculator two or three times during the whole session. The current test is much less a mathematical exercise than it was several years ago. You must, however, be aware of the basic formulas for mutual funds. The scratch paper is another matter. Before you start the exam, make all the notes you need on the scratch paper. One of the most useful tools is the teeter-totter illustrating the yields on discount and premium bonds. You may be able to use these to simplify answering several questions. Anything else that you want to use as you take the exam should be on your scratch paper before you start the exam. Exam-Taking Hints Read each question all the way through and look at all the answers. Then go back to the question before attempting an answer. Did you see the word "not" or "except"? Can you spot repeated key words in the question and a specific answer? Eliminate the incorrect answers as quickly as possible. If two of the answers are exactly opposite the odds are very high that one of those is correct. The question writer will normally include everything in the correct answer. In your haste, you might miss an easier question by failing to read carefully. To ensure you are at your best, go to bed early the night before the exam and do not try cram in study time immediately before your test. Here, read this, take a test ". He handed me a page text book- the Series 7 text book and I read the thing cover to cover - 3 times! I actually wrote notes on each chapter the third time through. I had no practice questions, no practice final exams. I believe, to this day, that the only thing that got me through that exam was writing all of those notes. Today, of course, there are a lot of resources and tools to help get us through all of our exams. A very nice tool to help the busy professional with the time management demands these exams extoll. There are online practice questions and Final Exams, as well as video libraries to help us with the tremendous volume of information these tests cover. One of the most common questions I get from students is how best to study for their exams. This is usually the "recipe" I recommend to best understand and retain the information necessary to pass their exams: Instead of trying to tackle the entire textbook from cover to cover, take it chapter by chapter with practice questions after each chapter to help retain the concepts and practice your test-taking techniques. Read Chapter 1, then do 20 questions from your online practice questions You can also, if available, enhance your reading with a video on the specific chapter. This, I truly believe, is the best way to obtain, retain and reinforce the necessary information. I find that many students try hundred if not thousands of practice questions when they are studying for their exams. This can sometimes dilute the core content that you need to retain for the test. These help us retain key facts we KNOW will show up on the test, i. Take a class in your area if possible. The classes are designed to focus specifically on the test content. Hopefully, if its a good class, they will show you the subtle differences between the text material and the real test. Take Practice Final Exams so that you can simulate the test-taking experience prior to your test. I like at least 4 Practice Finals to give you a good average score. Also, many of these exams provide diagnostic breakdown of your scores to fill in any remaining holes you may have. I truly believe if you systematically study the material, it will give you your best chance at success. Boy, I still remember sitting in that library, day after day reading that damn textbook. Chapter after chapter, after chapter, after chapter
