We can still make high quality Bibles here in America, and they are affordable! It is a high quality Bible. I will go over all of the features later in the review. The two piece retail box is sturdy and should be retained for storage. The Bible was wrapped in black paper to further protect the black genuine cowhide leather cover. For instance, I have an R. Allan Readers in goatskin leather. It is nothing like the goatskin I have on a Cambridge Clarion Bible. The Allan was thick and tough compared to the Cambridge. When you get into Bibles, one of the first things that gets you going is that there are Bibles out there with very soft covers. This new excitement wears thin after a while. After using Bibles with super supple covers for a while you begin to notice some drawbacks. If you have a larger Bible that is ssc it will become more difficult to sit and read as you have to support it somehow. The cover can flop away from the pages and leave your pages unprotected. There is a happy medium, thank goodness. I think that this Bible fits in that category very well. The genuine cowhide leather cover IS supple, but not too supple. It is coupled with a case bound text block instead of an edge lined one. This also keeps it from being excessively flexible, without too rigid. The cover offers just the right amount of support and protection. With a rigid cover you are fighting the cover, constantly trying to keep it down and out of the way. This Bible is just right in that regard. It felt good in my hands. It is manageable in size at 9. The spine is decorated with 6 raised hubs. It has gold gilt page edges rounded corners and a slightly rounded spine. The signatures are fairly large. I think this is what accounted for some pretty dramatic looking page waves when I first took this Bible out to use. The good news is that those wrinkles you see in the pictures went away after a day of being out of the box and packaging. With just light use everything kind of balanced out. For some reason the pictures made the problem look worse than what it was. Since this Bible has a lifetime warranty through Holman, if you received one with this problem I am certain they would take it back and do what they needed to do to make sure you were happy. I just used it for a little while and it got much better. In the front of the Bible there is a Presentation page. The paper is white enough to offer good contrast with the sharply printed modern digital 9 pt. This is a red letter edition. It is a double column, paragraph format Bible with center column references and footnotes at the bottom. In the footnotes there are alternate readings or notes on textual variants that is quite helpful. All of these features lend themselves to a highly legible text. It is easy on the eyes and will be a pleasure to use. The book names and chapter numbers are on the bottom of the page instead of the top along with the page numbers. If you are holding this Bible in your hand or lap while reading from a chair this makes more sense. If you are leaning over this Bible reading it at a table or desk the placement of that information can be less convenient. It is not the conventional way to do it, but that is not necessarily bad. There are two ribbon markers for your daily reading in the Old and New Testaments. I am actually beginning to expect this level of quality and value from Holman. Because of their work and the fact that we can have a domestically produced Bible of quality and value, I am expecting more from other Bible publishers. This is good for Holman, it might be painful to other publishers, but they can look at it as a negative and stop sending me Bibles to review like some have, or they can pick up the challenge and step up their game. Make sure to check out the rest of the pics I took of this Bible here.

2: Smyth Sewn Book Binding - BookFactory

The Designer journal is an elegant and sophisticated blend of colours, curves, and textures providing a creative playground for writing. pages - x Momento Pouch Ribbon Page Marker Acid-Free.*

It was well packed in a cardboard box with paper packing. Inside the shipping box was another two piece box containing the Bible. The two piece box was not your typical retail box. It was less sturdy. The NET Bible was also wrapped in plastic, and was shipped with a book mark. I was very curious about the notes and the results of the translation methods. The NET translation is available for free on the internet. You can read their copyright information on their page. With the knowledge that this work has been made available for free, I was inspired to do a little more research. I found that there are some groups that hate this translation. That would be you KJV onlyists, and some of your folks who are like me with their love for formal equivalent translations. Sometimes they are just Bible snobs. The NRSV has, as part of their translation agenda, the direction to be gender inclusive, even if the text does not indicate doing so. It is just as gender inclusive as the NIV, if not worse. It reminds me of the NIV in that regard, but not in how it reads. With a cursory perusal you might think it is a reference Bible. Both assumptions are somewhat incorrect. Unlike a conventional study Bible this one is full of translation notes. There are notes besides the translation notes, but predominately the notes are about the translations. These notes are not just every few pages, but instead are extensive. There are approximately 60, notes. I e-mailed the publisher and asked them. I wonder if they used the same printer. There is one ribbon marker that matches the color of the cover. It is a pretty good ribbon compared to the anemic, twisted, little things you find in most Bibles. The paper is as thick as it can be at 28 g. If it were thicker, this Bible would be as well, and it is already quite thick. The paper is just opaque enough. The page edges are gold gilt. The layout is double column, paragraph format, with the notes underneath. The notes are 7. Since there are so many of them it is a good thing they are very legible. The face is Times New Roman. If they would have used a larger or different font, then the Bible would have been even bigger. The end pages are marbled brown pattern, and pasted down to the bonded leather cover. The cover has an artificial texture to it. It feels like it will withstand scratches, and abrasions better than some natural hide covers. According to the publisher, the bonded leather used for this cover is the top of the line for this type of application. They say the modern bonded leather is not the same old bonded leather of the past, that we have all come to dislike. I am told that the leather fibers are bonded to polymer instead of paper like in the old fashioned bonded leather and that this cover could last more than years. The corners are pretty typical. This is a case bound Bible. Hebrew and Greek alphabet charts are included in the back. The black and white maps in the back are nice, and they are bolstered by a unique set of satellite image maps printed in full color on a glossy paper. These include a fold out to. Completed by more than 25 scholars working directly from the best available Hebrew, Aramaic, and Greek texts this translation is the most accessible ever due to the unparalleled detailing in the notes and up-to-date language. To read this translation along with all the notes go to net. You can read more about the NET Bible translation process, see sample pages and view the state of the art maps on bible. Or check out the short video about the development of the NET Bible. Its continuously updated translation, supported by an array of quality footnotes on the original languages, will be an invaluable resource for pastors, missionaries and well-trained laymen. Bringing instant access to the best research with just a few clicks, the NET Bible has truly brought a visionary form to a timeless function. Gene Getz Full Notes Features: They have done an excellent job at explaining why they chose the words they chose during the translation. I would recommend this to any serious Bible student. It comes in very handy. Make sure to look at all of the pictures I took of this Bible on my flickr album.

Pages sewn together before assembly Construction: Smyth Sewn also known as Section Sewn book bindings are the highest quality book binding available on the market today. It is the hallmark of library quality, archival safe books because the pages are physically sewn into the book using binders thread and further reinforced with fabric backing and adhesive to create the most usable and durable books available Textbooks and books for libraries are typically Smyth Sewn because they stand up to years of wear and tear. Smyth Sewn bindings use thread to sew through folded signatures of a book. Signatures are made by printing on large sheets and then folding into groups of pages, usually 16 or 24 at a time. Each signature is sewn individually with threads going through each page several times. The threads are then tied off. All of the signatures are likewise attached together with thread creating what is called the book block. The book block is further strengthened using flannel and adhesive on the spine. Smyth Sewn books are the hallmark of top quality books. For notebook and log book purposes, it is an essential characteristic because they are inherently tamper evident. You cannot remove a page from a book without destroying the integrity of the binding. That is why Smyth Sewn notebooks are required by top research companies for documenting intellectual property for patent filings. They are also a rock solid method for proving compliance with laws and regulations. Smyth Sewn books open flat User Friendly: Books with Smyth Sewn bindings lay completely flat, making them easier to read and write in. From lab notebooks for recording intellectual property, to log books for proving regulatory compliance, journals for conferences and sales meetings, and self published books and textbooks, nothing is better suited. Look closely at the binding where the pages meet the spine and you can see the folds of the page signatures. Open the the book to the middle of a signature and you may be able to see the binding thread stitches.

Construction: The bindings are Smyth Sewn or Section Sewn, which is the highest quality book binding available. This means the pages are physically sewn into the book using binders thread, further reinforced with fabric backing and adhesive to create the most durable books available.

9: smyth-sewn “ Page 2 “ Snyder's Soapbox

If you see something that looks like stitching along the spine edge of the first and last signatures, amazingly, that still doesn't necessarily tell you you have a sewn or smyth-sewn binding. It just means the signatures were reinforced there with topstitching.
