The sex is amazingâ€”from start to finish, I feel better than I ever did even in the best moments with my ex. And in the most intense moments? He makes me see stars. He is a very generous loverâ€”he turns me on like crazy and I regularly come while sexting with him. But I have yet to have an orgasm with him. In the past, I have had an orgasm with a partner only from oral or very occasionally from digital clit stim. My ex-husband was not skilled at oral, so I always had to fantasize pretty hard to get there and regularly chose not to bother. My new partner has amazing moves and amazing oral skills. And he is willing to keep at it for as long as it takes. I wonder if I just need him to be more boring and repetitive so that I can focus. Why would I want to make the sex worse to make it "better"? Is it OK to give myself permission to give up on partner-based climaxing? No Orgasm Possibly Ever Beware of those self-fulfilling prophecies! If you sit thereâ€”or lie thereâ€”telling yourself that being with Mr. You had tons of shitty sex with your ex, but you could climax so long as you focused, i. In other words, NOPE, with your ex you were able toâ€”you had no other choice but toâ€”retreat into your own head and rely on your own erotic imagination to get you there. You may have been physically present during sex, but you were not emotionally or erotically present. You created a powerful association between going to a private, safe, sexy placeâ€”pulling away from your partner emotionally, erotically, and sometimes even physicallyâ€”and climaxing. Nor do you want to. And, hey, wanna know why you come when you sext with him? Because sexting is assisted fantasizing. The trick is not to rush it and, again, not to box yourself into negative self-fulfilling prophecies like the one you ended your letter with. It may take some time, sure, but trust that your body and your brain are already hard at work carving that new groove. The next time you have sex with Mr. Then stimulate yourself, either digitally or with a vibrator, while he holds you. If you need to lean back and close your eyes, lean back and close your eyesâ€”but do not retreat into your own head. A couple of dozen self-administered orgasms with both of you in the roomâ€”in the room emotionally, erotically, and physicallyâ€”will speed that new-groove-carving process along. Help A Guy Out? My pleasure, HAGO, but be careful: Over the last few months of the relationship, I started falling for someone else and began dating the new guy pretty much immediately after the breakup. When should I tell my old boyfriend? We agreed to stay friends, and we still talk and see each other at least once a week. And once-a-week meetings definitely qualifies as too much, too soon. That said, if you think your ex-boyfriend is likely to hear about your new boyfriend from mutual friends, telling him yourself and soon is obviously the right and difficult thing to do. But if your ex is going to find out about your new boyfriend from, say, your Instagram account, encouraging him to unfollow you and letting some time passâ€”enough so you can fudge the start date of your new relationshipâ€”would be the right and ego-sparing thing to do.

Where was that executive elevator Nick looked in dismay at the overflowing amounts of case files piled in his inbox. It was a testament to how well he and his partner worked together that the stack had grown to such ridiculous proportions. They had easily twice as many reports to file as any other team in the building which came with a certain sense of pride, as well as a certain sense of disappointment, both in himself and his mate. Mostly himself as he had usually let his mate talk him into these things. It was late in the afternoon but the time for caffeine in their lives was a matter of necessity rather than a matter of timing. He thankfully took a sip of the delectable drink, ignoring the scalding temperature that threatened to dissolve his mouth. Judging by the flavor and how long ago his bunny had left, he knew it was from the break room. While not the best tasting, it did the job it was meant to do and fired up his mind. Grabbing a new stack of files, Nick happened to look up at the gray rabbit across from him. Decked out in a blue neoprene body suit with kevlar vest and brass shield, the doe was a shining example of what the best officers should aspire to be like, though she would adamantly protest she was not a role model, for kits or officers alike. So, are we doing anything tonight? Thankfully, he kept his thoughts to himself knowing that if he voiced them that any chance he might have at persuading her to let him finish tomorrow would go straight out the window. It had been nearly a week since they had gone out to do anything fun. He loved spending time with his doe on the couch all cuddled up together watching new shows on DVR or reruns of oldies but goodies on late night TV, but he was itching to get out of the apartment and spend some time out on the town, even if it was something as mundane as a veggie burger and fries in the mall food court. I was thinking that maybe we could Her battle of staring at the floor until Nick gave up came to an end when a balled up piece of paper landed smack dab between her ears. The glare she sent him might have used to scare him, but too much time spent together had made him mostly immune to her looks, though her punches remained quite effective. I told them I would ask you. How he had managed to get all of the reports done he would never know. All he did know was that his digits were numb, his eyes were watering, and he had an overwhelming hatred of paper. They had taken a little bit longer to leave then they had planned as Judy wanted to go over his work, though in the end she found it satisfactory, giving him a quick peck on the nose as a reward for putting up with her. Luck was on their side once they had cleared the parking garage as there was very little traffic, which was surprising on a Friday night but not something they dared to question. Though the past year with Judy had pretty much robbed him of that opportunity as his little bunny rarely was in bed past eight AM on a weekend. Ceremony is at 10 meaning we have to be there at 9: So adding all that up Tomorrow is a huge day and we are not going to be the cause of it going badly. I know how important it is too. She lagged behind slightly so that he could not see her wiping her eyes. It never failed that when he brought up something painful from his past it would cause her to break down, letting the tears flow from what had been done to her mate. It was the stories of him as a child that affected her the most. For now though, she would let him keep his walls around their friends and resolved to make him feel overly loved when they reached home. Jogging to catch up to Nick, who had already gone through the double doors, Judy was overwhelmed as soon as she stepped inside. Deafened and disoriented by the chaos surrounding her, the loud cheers from the assembled mammals hurting her ears and the flashing lights of the games along the wall nearly blinding her, Judy stumbled along trying to find her fox. Thankfully, the further she made it into the building the more she became accustomed to the sensations until they were manageable, though still made her wince occasionally. More clear headed, Judy began looking around trying to find her mate. There were surprisingly quite a few foxes who were there bowling. It looked like two teams, each side wearing matching jerseys. She figured it must be an all fox league. Her passing did not go unnoticed by the vulpines. Several of them raised their noses, sniffing the air, a couple even turning their gazes towards the crowd, searching for the source of the mark they were picking up. Instead of seeing any vixens nearby though, all they were greeted by was a gray bunny who positively reeked of fox musk. Noticing their stares, Judy smiled back confidently, knowing what they were suddenly interested in and raised her paw in a friendly wave, the lights reflecting off the ring Nick had placed on her paw. The two who had first caught on that she was the one they were smelling opened their eyes wide. Several nudges and head jerks later had the entire assembled group staring in wonder. I got us a lane and the girls right next to us. His tail instinctively wrapped around his mate protectively, making some of the foxes gathered nearby to raise their brows in alarm. He slowed and approached, trying to appear non-threatening. Was just coming to say hello. Not too often we see mate rings anymore and one on a rabbit of all mammals? Well, it just kinda peaked our interest. Don has the clipped ear. Or Fred and George. Robbie over there with his thumb stuck in the ball. Then you got my cousin Ted, and his friend Adam.

I shall never forget how wild and savage one group appeared: suddenly four or five men came to the edge of an overhanging cliff; they were absolutely naked, and their long hair streamed about their faces; they held rugged staffs in their hands, and, springing from the ground, they waved their arms round their heads, and sent forth the most hideous yells.

Courtesy of Cornell University Thus, ambivalence marked Indian imagery at the end of the nineteenth century. In the long struggle for mastery of the continent, the image of the bloody savage had always qualified any regret occasioned by the passing of the noble savage. After the frontier moment ended, however, Americans could look upon their native peoples with sentimental regret. James Earle Fraser in translated popular sentiment into a sculpture of lasting appeal. End of the Trail shows a mounted Plains Indian, head bowed, shoulders slumped, his spear pointing at the ground, resigned to his fate, which was that of his race. Guiding Student Discussion Racial stereotyping is a minefield, and entering it for purposes of classroom discussion requires a carefully thought out strategy. The truth is that students are often impatient with the past. In order to discuss historical stereotypes, you have to introduce students to them. This runs the risk of coming across as advocacy. Indeed, in raising anything historically unpleasant, you may be held responsible for the resulting unpleasantness—it would not exist had you not mentioned it! Having introduced stereotypes, you are left to deal with them. Outright condemnation is easy, since it conforms to what students already think. Anything more challenging runs even greater risks. You want to talk about stereotypes of African Americans and American Indians, so you show your class a cartoon of an African American eating watermelon and a photograph of a cigar store Indian. If your point is simply that these images prove the ignorance of EuroAmericans in the past, then you will have no controversy. If you introduce the same images to probe the underlying values of a society that considered them acceptable, then you invite controversy. And to what ends? What use did the EuroAmerican majority have for each race? The labor of one, of course, and the land of the other. How would those different uses shape stereotypes? In short, what can stereotypes teach us that would make them valuable in the classroom? What can they tell us beyond the obvious? Students may remain un-persuaded. What else is there to say? Why study the attitudes of another age if, by our standards today, they were deplorable? Moral certainty underlay their actions, too. Far from being illogical, they were, according to their lights, entirely logical! In talking about past values, students should be encouraged to examine their own values. How are attitudes formed? How do we know what we know? How does experience shape our views? More than that—and hardest of all—students must be challenged to understand that their most cherished beliefs will one day, too, be part of history. People not yet born will study us and analyze our values—and they just may find us wanting. Far from making us feel superior, then, history should chasten us. The past has been described as a foreign country. We must visit it with open minds and all due respect for its customs, eager to learn, not simply to judge. Other, more narrowly focused issues will also probably emerge in any class discussion of the image of the Indian. Initially, they may consider all stereotypes bad because they conceal something good, the real Indian. Two lines of questioning suggest themselves: Or by an allegiance to traditional culture? Second, are some stereotypes more acceptable than others? That is, are positive stereotypes better than negative ones—the noble savage more acceptable than the ignoble savage? Besides engaging students in a discussion about the longevity of old stereotypes, it raises another issue: Class discussion of Indian images may also pursue another line of questioning. Granted stereotypes like the noble and ignoble savage and the Vanishing American, who, in particular, believed them—and how do you show that they believed them? Citing a few heavyweight thinkers proves little, and smacks of elitism. How about ordinary people? What did they think—and how do we know? Here the popular culture of any given period is relevant. Today we would look at the electronic media, films, music, etc. At the very least, the sheer pervasiveness of the major Indian stereotypes in popular culture will be a revelation to most students. Given that people held certain views about Indians, So what? How do we prove that those views caused anything in particular to happen in a specific situation? This is the same challenge that has always faced intellectual

historiansâ€™ establishing the link between idea and action. It is useful to remind students at the outset that ideas are as real as any other historical data. Since history itself is a mental exercise, the historian can hardly deny people in the past a fully active mental life of their own. As a general proposition, what people believe explains what they do. When, for example, Congressmen in the nineteenth century debated Indian affairs and referred to the bloody savage to promote an aggressive policy, or talked about a noble race that had been dispossessed to advocate a humanitarian policy, we can see a belief system at work with direct, practical consequences. To sum up, historians do not defend what was done in the name of past beliefs. They are not apologists or advocates. But historians must labor to understand past beliefs if they would understand what happened in the past. Ideas are often self-fulfilling prophecies: And historical stereotypes of the American Indian have done exactly that. A Study of the Indian and the Idea of Civilization ; rev. A Study of the Indian and the American Mind, , stated the assumption still fundamental to any examination of the image of the American Indian. Dippie, The Vanishing American: White Attitudes and U. Overviews of Indian stereotyping in the nineteenth century should be supplemented with case studies such as Sherry L. Native American Identity in the Press, â€™90 As can be seen, they have had much to say on the subject of Indian stereotyping. A readable, accessible book is Louise K. American Literary Racism, â€™ For those who want to test the waters, a number of titles come to mind: Indian Ghosts and American Subjects The image of the Indian in art has been comparatively neglected. Two illustrated essays provide different interpretations. Transforming Visions of the American West , focuses on visual representations of the fate of the Indian. Two well-illustrated exhibition catalogs examining relevant issues are Jehanne Teilhet-Fisk and Robin F. The Contact Zone , and Sarah E. Portrayals of Native America The Life and Times of a Shadow Catcher is the most substantial of the many Curtis picture books, and students always enjoy looking at his work. Photographs of Indians by Edward S. Curtis fired the opening salvo by documenting the ways Curtis manipulated his subjects to create images of the timeless Indian. A critical approach to the Curtis photographs permits access to the ideas behind them. Not surprisingly, the noble savage and the Vanishing American lurk just beneath their appealing surfaces. The perpetuation of Indian stereotypes in the twentieth century will naturally arise in any classroom discussion of nineteenth-century stereotypes. Students invariably turn to film, television, and music as sources for their own ideas, and I have already mentioned the usefulness of a film like Dances with Wolves in stimulating interest. Consequently, the literature on cinema as a source for Indian stereotypes may prove relevant. Myth and Identity in the American Western But in bringing the subject of Indian stereotypes in literature and art up to the present, it seems to me useful to end with something elseâ€™the contemporary American Indian voice. Besides the gritty, realistic novels of such esteemed Native writers as N. Indian Policy , Catlin and His Contemporaries: He has also contributed to numerous other volumes and edited or co-authored several volumes on the art and artists of the American West. Chapter 35 - Some past, some present, some future. 4 months later 'Life is what happens when you're making other plans.' A quote that speaks volumes of what reality truly is, and something that hits closer to home than anyone who has not heard the saying will ever realize.

Actually, this one is better called "Darwin was a racist", but as the text concerned is from the same source as those claims, I thought it might be easier to evaluate a single claim and generalise from that. If you read Darwin sloppily, or to find evidence that he really was a Very Bad Man for rhetorical - usually religious - purposes, you soon come across this statement. In fact, you can find paraphrases of it in literally hundreds of creationist documents and sites. Here is the offending passage, from towards the end of chapter VI of the Descent: At some future period, not very distant as measured by centuries, the civilised races of man will almost certainly exterminate and replace throughout the world the savage races. At the same time the anthropomorphous apes, as Professor Schaaffhausen has remarked, will no doubt be exterminated. The break will then be rendered wider, for it will intervene between man in a more civilised state, as we may hope, than the Caucasian, and some ape as low as a baboon, instead of as at present between the negro or Australian and the gorilla. It is right that civilised races should exterminate the savage races 2. It is right that the great apes which Darwin calls "anthropomorphous" or "humanlike" will be made extinct. When this happens the gap between humans and apes will be wider because the intermediates, apes and negroes or Australian aborigines, will be gone. Aborigines and negroes are more apelike than Caucasians. The full passage, which begins on the previous page is this: The great break in the organic chain between man and his nearest allies, which cannot be bridged over by any extinct or living species, has often been advanced as a grave objection to the belief that man is descended from some lower form; but this objection will not appear of much weight to those who, convinced by general reasons, believe in the general principle of evolution. Tarsiers and Lemurs]â€™ between the elephant and in a more striking manner between the Ornithorhynchus [JSW: But all these breaks depend merely on the number of related forms which have become extinct. The argument given here is not one of progress but of taxonomy. Darwin is arguing that there is no simple continuous "carpet" of forms of intermediates because breaks are formed by extinction. But Darwin is trying to convince his readers that this is not to be expected. The use of the term "organic chain" is one of many unfortunate terms Darwin uses here - it brings to mind the late medieval notion of a continuous scale or ladder of nature - but I think Darwin gets it from the critics he mentions, the ones who argue for a "missing link" in that chain. Missing linkism is a common criticism of Darwin still. Then Darwin does something I would not have expected him to do, for reasons that I think will become clear, though no more admirable: I think Darwin exhibits here a failing he shows in the Origin and elsewhere: So for him if a culture does well relative to other cultures, and extinguishes them, it must be the same sort of thing as when a variety of wolf replaces another by natural selection. We can see this operating in the prior chapter, where Darwin tries rather unsuccessfully to deal with the vexed problem of the effects of natural selection on humans in a state of civilisation. At first he tries to argue, based on published ideas of W. But under the influence, I think, of his cousin Galton, Darwin is forced to admit that this is not inevitable, and too often societies will "retrograde". Then he tries to argue the beginnings of a cultural evolution view - we owe almost nothing to descent from the Greeks, but we owe much to their intellectual heritage. But then he moves immediately back to a biological selection process - Spain is surpassed because it had institutions that selected against better natures, like the Inquisition! And the English and their progeny America are obviously the result of natural selection. But Darwin is more liberal than that - even civilised nations like Britain [! And even religion has evolved: He concludes that chapter by saying To believe that man was aboriginally civilised and then suffered utter degradation in so many regions, is to take a pitifully low view of human nature. It is apparently a truer and more cheerful view that progress has been much more general than retrogression; that man has risen, though by slow and interrupted steps, from a lowly condition to the highest standard as yet attained by him in knowledge, morals, and religion. So Darwin appears vague because, I think, he is confused. He lacks the distinctions necessary to make sense of the

anthropological literature, itself imbued with racism from the common European heritage of the day. He concedes to the racism of his peers, but its a cultural racism, not a biological one, I think. Darwin is not so much a racist as he is a Eurocentrist. Of course, racism need not be at all biological to be racism. One point that I think is important to stress: Darwin repeatedly lists what he thinks are facts about the future of this or that race or culture or society. This is in no way an endorsement. He says fairly clearly that to act in a way so as to eliminate the "inferior" one would do great harm to our better natures: The aid which we feel impelled to give to the helpless is mainly an incidental result of the instinct of sympathy, which was originally acquired as part of the social instincts, but subsequently rendered, in the manner previously indicated, more tender and more widely diffused. Nor could we check our sympathy, if so urged by hard reason, without deterioration in the noblest part of our nature. The surgeon may harden himself whilst performing an operation, for he knows that he is acting for the good of his patient; but if we were intentionally to neglect the weak and helpless, it could only be for a contingent benefit, with a certain and great present evil. Hence we must bear without complaining the undoubtedly bad effects of the weak surviving and propagating their kind; But he then spoils the liberal effect by hoping for some direct action: Why does Darwin do this? In the early days of a theory or new view, it is hard to puzzle out all the ramifications of the idea, and to isolate it from superficially similar ideas already in the air. It turns out, Darwin is human after all. This is not the first time Darwin backs down from his theory in the face of criticism by those who "know better". He failed to stick with his theory in the face of the common belief that inheritance was blending. If, as we maintain, natural selection is the great active cause which has produced the whole wonderful variety of organic life on the earth, all the interesting phenomena of human life must also be explicable from the same cause. For man is after all only a most highly-developed vertebrate animal, and all aspects of human life have their parallels, or, more correctly, their lower stages of development in the animal kingdom. The whole history of nations, or what is called "Universal History," must therefore be explicable by means of "natural selection," â€” must be a physico-chemical process, depending upon the interaction of Adaptation and Inheritance in the struggle for life. And this is actually the case. An Appraisal", History of Science 13 Or the development of the earth and its inhabitants by the action of natural causes. A popular exposition or the doctrine of evolution in general and of that of Darwin, Goethe, and Lamarck in particular.
