2: Tea For Two - Tea For Two Lyrics | MetroLyrics

A song for one or two: music and the concept of art in early China. (Michigan Papers in Chinese Studies, No.) [xi], pp. Ann Arbor: Center for Chinese Studies, University of Michigan, \$6.

History[edit] The first sound recordings at the end of the 19th century were made on cylinder records , which had a single round surface capable of holding approximately two minutes of sound. Early shellac disc records records only had recordings on one side of the disc, with a similar capacity both media could hold between three and four minutes by Double-sided recordings, with one selection on each side, were introduced in Europe by Columbia Records in , and by most record labels had adopted the format in both Europe and the United States; the ability to effectively double the amount of sound on the disc was one major factor in its rising to dominance over the cylinder record which was obsolete by There were no record charts until the s, and radio stations by and large did not play recorded music until the s when top 40 radio overtook full-service network radio. In this time, A-sides and B-sides existed, but neither side was considered more important; the "side" did not convey anything about the content of the record. The term "single" came into popular use with the advent of vinyl records in the early s. At first, most record labels would randomly assign which song would be an A-side and which would be a B-side. All records have specific identifiers for each side in addition to the catalog number for the record itself; the "A" side would typically be assigned a sequentially lower number. Under this random system, many artists had so-called "double-sided hits", where both songs on a record made one of the national sales charts in Billboard , Cashbox , or other magazines , or would be featured on jukeboxes in public places. As time wore on, however, the convention for assigning songs to sides of the record changed. It was not until , for instance, that the total production of albums on a unit basis finally surpassed that of singles in the United Kingdom. The majority of the 45s were played on AM radio stations, which were not equipped for stereo broadcast at the time, so stereo was not a priority. However, the FM rock stations did not like to play monaural content, so the record companies adopted a protocol for DJ versions with the mono version of the song on one side, and stereo version of the same song on the other. By the early s, double-sided hits had become rare. Album sales had increased, and B-sides had become the side of the record where non-album, non-radio-friendly, instrumental versions or simply inferior recordings were placed. In order to further ensure that radio stations played the side that the record companies had chosen, it was common for the promotional copies DJ version of a single to have the "plug side" on both sides of the disc. At first, cassette singles would often have one song on each side of the cassette, matching the arrangement of vinyl records, but eventually, cassette maxi-singles , containing more than two songs, became more popular. However, the term "B-side" is still used to refer to the " bonus " tracks or "coupling" tracks on a CD single. With the advent of downloading music via the Internet, sales of CD singles and other physical media have declined, and the term "B-side" is now less commonly used. Significance[edit] B-side songs may be released on the same record as a single to provide extra "value for money". There are several types of material commonly released in this way, including a different version e. Typically, "part one" would be the chart hit, while "part two" would be a continuation of the same performance. This became known as the "flipside racket". This sometimes occurred because a DJ preferred the B-side to its A-side and played it instead. The song " How Soon Is Now? Feeder in and had the B-sides "Just a Day" from "Seven Days in the Sun", and "Shatter" from " Tumble and Fall " released as A-sides after fan petitions and official website and fansite message board hype, and both charted at No. On many reissued singles, the A- and B-sides are two hit songs from different albums that were not originally released together, or were by completely different artists, altogether. These were often made for the jukebox , as one record with two popular songs on it would make more money, or to promote an artist to the fans of another. With synthpop increasingly dominating the UK charts, the single was re-released with the sides reversed. In early "The Model" reached number one. Double A-side[edit] A "double A-side" is a single where both sides are designated the A-side; there is no B-side on such a single. Although many artists in the late s and early s like Elvis Presley , the Everly Brothers , Fats Domino , Ricky Nelson , the Beach Boys , Brenda Lee , and Pat Boone , routinely had hit singles where both

sides of the 45 received airplay, these were not double A-sides. It was also the UK Christmas No. Both sides of the single received much radio airplay often one after the other, which led to them sometimes being referred to as a double A-side. Occasionally double-A-sided singles were released with each side targeting a different market. In , the Bee Gees also used this method when they released " Too Much Heaven " for the pop market and the flip side, " Rest Your Love on Me ", which was aimed toward country stations. Many artists continue to release double A-sided singles outside of the US where it is seen as more popular. Artists having the most US double-sided singles on which each side charted in the US Hot , according to Billboard:

One, Two, Buckle My Shoe is a fun nursery rhyme, action song for children. It's great for brain breaks, indoor recess, morning meeting, group activities and circle time.

Work on the melody and chords using the verse and chorus lyric you have, gradually smoothing and changing until you have something you like. Then write the rest of the lyric to the final melody. Songs for musical theater are different – they usually do require perfect rhymes. Check out a web site like Rhymedesk. Read my post To Rhyme or Not to Rhyme on my blog site. Know when to take a break Work on your lyric for short periods of time. Take a walk and let things settle for awhile. Keep the hit song melody in your head. The most important thing and the most difficult is to keep the emotional integrity of the song intact. Keep working on the lyric until you are genuinely moved and excited by it. Check out my books at Amazon. Back to Contents list. While song melodies and lyrics are copyrighted, in general, these familiar chord progressions are not. C-Am-F-G belongs to everyone! You can use this type of generic chord progression in your own songs. Listen to a recent hit song and learn to play along on either guitar or keyboards. There are many YouTube videos that will show you how to play recent hits. These are protected by the copyright law. Learn to play chords If you already have an idea for your melody, you can hunt for the chords that fit. Check out my Resources page for a good one. Or you can take a few lessons from a local music teacher. Many music stores offer lessons. Your local community center or college may have classes. Or ask friends and neighbors to refer a teacher. We know chords, we know song craft, we know how to follow our emotions – none of this has anything to do with how many dazzling riffs and licks you can play. Just strum or chord along with your voice and keep the emotional feel front and center. Karaoke tracks offer an instant backing track that can inspire ideas and get you singing your lyrics to a contemporary beat. Go ahead and write a song for friends and family or just for songwriting practice. The track itself is copyrighted but generally the chords are not. Read on my blog: A lyric with a single, strong emotional focus is ideal for this use. Notice how they enhance and deepen the effect of the scene. As an exercise, choose a scene and try writing a song that would work with it. Record your vocal and a simple guitar or piano part, then play it softly under the scene to see if it increases the emotional impact. Time to look for a co-writer! Back to the hunt for collaborators! Idea 1: Universities and community colleges in your area will have a music department. Also, check to see if there is a campus club or group interested in music or songwriting. Check out clubs in your area that feature local artists. Check out local music stores. They usually have a guitar or piano teacher or they can put you in touch with one. The teacher might be interested in writing with you or may know a student who is looking for a collaborator. Advances in recording technology have revolutionized home recording. There are many inexpensive software programs that include both MIDI sequencers for use with MIDI keyboards and audio recording capability to record vocals and guitar. Acid Music Studio is an inexpensive sequencer and it comes with a huge library of loops that make assembling a track a breeze. Yamaha makes a good inexpensive keyboard. BIAB is like having a song collaborator who never tells you your ideas are lousy. It will create a chord progression or you can type one in or play one on a MIDI keyboard. It will create a drum, bass, piano, guitar, and string arrangement based on your chords. BIAB will even create a melody and a title! To find out more, visit my Resources page. There are many good recording studios and demo services that can produce all or part of your demo. The longer playing time of these singles allowed the inclusion of extended dance mixes of tracks. In addition, the larger surface area of the inch discs allowed for wider grooves larger amplitude and greater separation between grooves, the latter of which results in less cross-talk. Consequently, they are less susceptible to wear and scratches. The inch single is still considered a standard format for dance music, though its popularity has declined in recent years. Radio single[edit] Physical singles continued declining[when? Since the establishment of the Billboard Hot, singles were not eligible to enter the chart unless they were available to purchase as a physical single. By the late s, several popular mainstream hits never charted on the Hot On 5 December, Billboard changed the rule to allow airplay-only songs onto the chart. Nevertheless, the concept of a single for an album has been retained as an identification of a more heavily promoted or more popular song within an album collection. These charts are often published in magazines and numerous television shows and radio programs count down the list. In order to be eligible for inclusion in the charts the single must meet the requirements set by the charting company, usually governing the number of songs and the total playing time of the single. It was certified Gold in the United States when it sold more than 1,, copies. In popular music, the commercial and artistic importance of the single as compared to the EP or album has varied over time, technological development, and according to the audience of particular artists and genres. Singles have generally been more important to artists who sell to the youngest purchasers of music younger teenagers and pre-teens, who tend to have more limited financial resources. Perhaps the golden age of the single was on 45s in the s to early s in the early years of rock music. Singles continued to be produced in the UK and Australia, surviving the transition from compact disc to digital download. The discontinuation of the single has been cited as a major marketing mistake by the record companies considering it eliminated an inexpensive recording format for young fans to use to become accustomed to purchasing music. In its place was the predominance of the album which alienated customers by the expense of purchasing an expensive format for only one or two songs of interest. This in turn encouraged interest in file sharing software on the internet like Napster for single recordings initially which began to seriously undercut the music recording market. Single sales in the United Kingdom reached an all-time low in January, as the popularity of the compact disc was overtaken by the then-unofficial medium of the music download. Sales gradually improved in the following years, reaching a record high in and that further being overtaken in, and A related development has been the popularity of mobile phone ringtones based on pop singles on some modern phones, the actual single can be used as a ringtone. Sony announced plans to release 50 ringles in October and November, while Universal Music Group expected to release somewhere between 10 and 20 titles. The Crazy Frog ringtone, which was a cult hit in Europe in, was released as a mashup with "Axel F" in June amid a massive publicity campaign and subsequently hit 1 on the UK charts. The term single is sometimes regarded as a misnomer, since one record usually contains two songs: In, CBS marketed one-sided singles at a lower price than two-sided singles. Gnarlz Barkley was the first act to reach No. It was released physically the following week. On 1 January digital downloads including unbundled album tracks [22] [23] became eligible from the point of release, without the need for an accompanying physical.

5: Songs About Number One | Best Songs With One In The Title or Lyrics

One, Two, Buckle My Shoe "One, Two, Buckle My Shoe" or "1, 2 Buckle My Shoe" is a counting song dating back to late 18th century USA. It was heard for the first time around somewhere around Wrentham, Massachusetts.

A hidden track can mean: See the special purpose track title guidelines and, where necessary, the guidelines for multiple titles for details about how to name these tracks. A type of user. Mix terminology compilation Either an entire album, or one long track which contains multiple songs played one after the other. A compilation requires only that the tracks be played one after another. DJ mix A sequence of several songs played one after the other, each one modified so that they blend together into a continuous flow of music. Common techniques for this include crossfading , beat-matching , beat juggling or scratching. A DJ mix requires that the tracks be modified in some manner. If the tracks have not been modified, then the action which should be described by relationships is compilation, not DJ mixing. Also see medley, for cases where the sequence of songs involved a brand new performance, rather than the use of prerecorded material. Use the DJ mix relationships to describe this special type of mix. A mash-up differs from a DJ mix in that two or more songs are playing simultaneously, rather than one after the other. In general, in a mash-up, each original source will contribute more-or-less equally to the final work. There is no requirement, however, that the entire mix of each source be used; a common mash-up technique is to use the vocals from one song mixed with the music of another. Songs involved in a mash-up can be indicated with Mash-up Relationship Type. The existing published versions of the song are not used. See Medley Relationship Type. See Mix Engineer Relationship Type. This portion may be manipulated e. A loop is a sample which is played repeatedly. The presence of a sample or loop in the music does not make that music a mash-up; typically, the presence of one or more samples or loops indicates a remix, if they were not a part of the original master itself. The artist doing the remixing can be the original artist. The source audio material can be from any part of the process; including the final mix, master, remaster, or original raw audio materials. If the tracks have been significantly modified, more than is necessary to produce a continuous mix, then the action described by relationships is considered to be remixing, not compilation or DJ mixing. See Remaster Relationship Type.
