

1: Prevent Google Chrome from Opening PDF Files in the Browser

Chrome opens automatically after start/rebooting on Win10 So far I love Windows My only issue is Chrome starts by itself every time I start the computer up, or reboot.

You too may have certain file types that you want opened directly. So how does it work then? It starts with a download. Download the file type that you want opened automatically in the Chrome browser. You should see it displayed in the downloads bar at the bottom of the page. When it completes, click on the small arrow icon next to it and select the "always open files of this type" option. This marks the file type so that it is run automatically whenever files matching it are downloaded to the local system. All future files that you download that match the file extension will be run automatically on the system. Chrome will always load them in the default application set for the file type on the system with no option to change it to a different program. The process needs to be repeated for other file types that you want executed automatically instead of being just downloaded. You are probably wondering how you control the feature. There are two options for that. First, you can uncheck the option if the file type is still displayed in the download bar in Chrome. You find a new option under downloads that is only there if you have set at least one file to run instead of download. Click on the "clear auto-opening settings" button to reset all file types to the default state of download. You will notice that the button disappears afterwards. All custom run instructions have been reset so that all files will be downloaded once again in the browser. Do you download files or set your browser to run files automatically?

Summary How to open downloads in Chrome automatically Description Find out how to run Chrome downloads automatically by configuring the browser in a special way to do so. Author Advertisement We need your help Advertising revenue is falling fast across the Internet, and independently-run sites like Ghacks are hit hardest by it. The advertising model in its current form is coming to an end, and we have to find other ways to continue operating this site. 2: Chrome opens automatically after start/rebooting on Win10 - Microsoft Community

If auto opening a file with google chrome while downloading happening, just go to the downloaded file (left below of the page). click to pointer and deselect "ALWAYS OPEN FILES OF THIS TYPE". If above option is not showing, then go to the setting /advance setting options/ clear "auto opening setting" in "Download" option.

How to stop Chrome from automatically opening at login? This is convenient if they are the most commonly used programs, such as dropbox or google drive, and work in the background. However, some applications are not needed to run automatically and can be a nuisance. Moreover, the growing list of autorun apps can increase the load time of your Mac. It may also happen that even after the app has been removed from the login items list, it still runs automatically. Users frequently ask how to stop Google Chrome, in particular, from automatically opening at login. We have the simplest solution to this problem. In this article we will describe three ways to change Mac startup items and disable the Chrome browser from being launched uninvited. Way 1 To take control of startup apps, first you need to open System Preferences from the Apple menu. In the opened menu switch to the Login items tab. Here you can change the items that open automatically when you log in. Select Google Chrome and click the minus button. Note, it is not necessary to remove the program from the list. If you simply do not want the window to be displayed at boot time, you can hide it without having to cancel the launch of the program itself. Way 2 You can easily add in a new application directly from the Dock. Way 3 As we have mentioned before, it is possible that even after you try to disable Chrome or another application from automatically launching, it still opens every time you turn on your Mac. The application is free to download and allows you to easily change your login items and even remove them. Here you can preview all the login items installed on your Mac. Use the switcher next to each app to enable or disable it. If the item is not a part of the application, you can delete it. Select Google Chrome and click the Remove button. Please note, the removal of extensions might have a significant impact on your system. Make sure you understand what you are doing and how it can impact the system. It is convenient to use the application as Launch Agent manager. Moreover, it shows all types of system extensions: The next time you turn on your Mac, Chrome browser will not disturb you.
