*Define taking the easy way out. taking the easy way out synonyms, taking the easy way out pronunciation, taking the easy way out translation, English dictionary definition of taking the easy way out. adj. eas·i·er, eas·i·est 1.*

But unlike most generations, we balk at renewing those investments and sacrifices on behalf of those who will come after us. Time after time, we take the easy way, not the right way, and as Americans we ought to be ashamed of that. That system - the backbone of our national transportation infrastructure - represents a legacy left to us by our parents and grandparents. Back in , when President Dwight Eisenhower signed the National Interstate and Defense Highways Act, we were a lot poorer as a people than we are today; in the Soviet Union, we also faced a far more serious threat than we do today. But that generation of leaders nonetheless committed to spend what today would be hundreds of billions of dollars to build an interstate system that few could envision back then and that many would never see completed. Our wars in Iraq and Afghanistan offer yet another example. In the wake of Sept. Rather than ask us to pay for war as every previous wartime generation had done, they gave us major tax cuts and told us to go shopping while they dumped the cost of this struggle onto future generations. It is remarkable that according to a new Fox News poll, 64 percent of Americans think we should pull out of Iraq immediately or within the next year. But apparently, few of that 64 percent care enough to translate that sentiment into political action. The same avoidance dynamic plays out in energy issues. No drug pusher respects an addict who comes to them time after time begging for another fix and never doing anything to shake the habit. To compound our shame, many of the steps needed to make ourselves less dependent on foreign energy, and thus less vulnerable to our enemies, would also address another important challenge that we prefer to avoid. The science behind global warming is no longer at issue - the science is solid. At this point, any doubts raised by skeptics serve as nothing more than excuses to do nothing. And once again, those excuses have been all too welcomed. The temptation to avoid pain and sacrifice, or to put it off as long as possible, is nothing new. In the previous century, the epitome of moral cowardice was probably Neville Chamberlain, the British prime minister who in tried to appease Adolph Hitler by handing him Czechoslovakia. But of course, war came anyway. This is the world we cover. Because of people like you, another world is possible. There are many battles to be won, but we will battle them togetherâ€”all of us. Common Dreams is not your normal news site. We want the world to be a better place. If you can help todayâ€”because every gift of every size mattersâ€”please do.

March 20, 2017 Leave a comment Our assignment for this essay was to do a study of a theme that comes up when everyone talks about their literacy experiences. One thing that we all had in common was that none of us like writing, and if we have to write, we do it the fastest and easiest way possible. We decide to write about something that we know can meet all the rules. Do we care about it? Nope not at all. Do we spend a lot of time on it? We can hear teachers saying, WHY?? She spent hours writing about the disease, why it was important, how it affected people, why it was controversial and discussed everything relating to disease. But there was a problem. My paper was only 4 and half pages long. It needed to be 5 pages long. She got an automatic 5 points off. Or maybe we only know how to write a certain way for a certain teacher. This intimidation leads to a hatred of writing. So after all the point deductions, we just stopped caring and more importantly we developed a hatred of writing. We no longer bothered to write about passions. Instead we wrote what was easiest. We wrote about something we knew a lot about or something that was popular and had lots of research done on it. Because we knew it would fit the criteria and get us the A. You should always put in the time because it will pay off in the end. There are also other reasons we tend to take the easy way out. Well it is actually. Students today have more on their plates than they have ever been. We are told to take all these science, math, and Spanish classes that we will most likely never need. We have mountains of homework due most nights. Not only that, but it seems strange that most of our test always seem to be on the same day. I mean when does it end? After all this work, the last thing we care about is an essay. Of course we are going to take an easier way. We also live in the golden age of technology, which offers endless distractions. These distractions make writing anything a challenge. For example, you go into Buffalo Wild Wings and are surrounded by flat screens on every wall. Another thing is most, if not all, essays are due online now. It was just you and your typewriter. Would you rather do an essay or shop for the latest sale? The choice is obvious. Technology may have made homework a little easier, but it also made it a little harder. It, in a way, can be considered an addiction. That addiction takes up a lot of our time. The only way to make up for it is taking the fastest route to success. Why study for a test for 6 hours get an A, when you can study for 2 hours and get an A. Taking the easy way out lets you do this. You are simply doing things more efficiently, in order to do things you actually care about. All of us have had success doing things the easier way.

*take the easy way out If someone takes the easy way out, they do what is easiest for them in a difficult situation, rather than dealing with it properly. As soon as things got difficult he took the easy way out.*

Print Email When Jessica Choi Yuk-chun sealed the windows and doors of her bedroom, lit charcoal in a barbecue grill and then lay down to die in her village house in Sheung Shui in November, she cannot have imagined the appalling repercussions of her lonely death. The year-old insurance executive left a note asking for her two pet dogs to be looked after. She also left a deadly legacy that is claiming the lives of people a year in Hong Kong alone, as well as growing numbers of suicidal people in Japan, Taiwan, Macau, the mainland and Chinese communities as far away as New Zealand. No one knows how Choi came to take her life this way, but she is credited with inventing a method of suicide that has developed into an alarming regional trend. A new study - the most detailed yet into the phenomenon - concludes it is now claiming the lives of people who would never before have gone through with an attempt to commit suicide. The study by a group of Hong Kong academics, published in the British Journal of Psychiatry, found she was the first person in the world recorded as taking her life by this method. Even the notorious Japanese suicide manual written by Wataru Tsurumi makes no mention of charcoal-burning. Today, one in four people who kill themselves in Hong Kong do so by charcoal-burning, the second most common method after jumping from high buildings. Elsewhere, in countries and territories around the region where the method has never before been recorded, people are killing themselves by charcoal-burning in increasing numbers. The method is already firmly established in Japan, where it is claiming the lives of scores of people, including three people in their 20s found dead in a car parked near a shrine km north of Tokyo after closing the windows and doors and burning charcoal inside. We have seen cases in Japan. Since, they have had more and more people dying of charcoal burning and they have never seen that before. It has only happened since the case in Hong Kong. What they found, according to Professor Dominic Lee Tak-shing, is that people who commit suicide by charcoal-burning are more likely to be economically active, 25 to year-olds, living in private housing, and less likely to be suffering from mental illness or disability. Significantly, they are three times more likely than people who commit suicide by other methods to be suffering from bad debts and financial difficulties - and researchers also believe from interviews with survivors that if it was not for the availability of charcoal-burning as a method, they would probably not have gone through with their attempts. They have no mental illness. They are like everyone on the street but they are not very smart at looking after their money. It is a great loss to society because, had these people not killed themselves, they would have continued to contribute to the prosperity of Hong Kong. Many of the survivors of suicide attempts interviewed by the academics were unaware of the high interest rates they were being charged for credit cards. Our informants in this study each had an average of four credit cards. In mainland China they are encouraging more and more people to take out bank cards and I think the problem there might become even bigger because they have less experience in managing these cards. In China, there are 1. Five years later, that figure had climbed to 40 per cent. Over the same period the number of suicides in Hong Kong climbed by 50 per cent to just under 1, in - 26 per cent of those by charcoal-burning. Would those 26 per cent of cases still be alive if charcoal-burning was not available as a method? Without charcoal-burning they would have thought twice before attempting to kill themselves. Both of those are very violent and uncomfortable and it takes a lot of courage to do either of them. Charcoal-burning is perceived as an easy solution because they believe they can die without pain. The way cases have been covered since reinforces the perceptions. Testimony from survivors tells a different story. They want to see supermarkets restrict the sale of charcoal to shops near barbecue areas and stop selling it in urban areas where few people have balconies or roof tops to hold barbecues. By reducing the accessibility, they argue, you create a window of opportunity in which the person intending to kill themselves can be helped. They also believe supermarkets and shops should tell staff to be on the look-out for people who appear depressed and act strangely when buying charcoal and to use their discretion to refuse to sell it to people who might be at risk. Measures such as mandatory locking of gun cabinets in the United States and restrictions on the sale of paracetamol in Britain have helped bring down

suicide rates in those countries. The researchers believe restrictions on charcoal sales in Hong Kong might have a similar effect. Dr Yip said suicide researchers had to combat myth and prejudice. Then there is prejudice against people who are suffering from depression and mental illness.

*Many take the easy way out because they tell themselves they don't have the time which means they just haven't made the time! They had plenty of time to create the problem but suddenly have no time to fix it!*

Not even fit for banana bread. Two dysfunctional people who fell madly in love but were just never able to get it together. Not oil and water so much as gas and fire. I love the man more than I can explain in a few paragraphs here. In many ways, I love him now more than ever before. Too much has happened, too much has been said. I feel scarred by his words. Battle wounds from the war of our marriage. If all the hurt suffered over the years physically manifested itself on my body I would be so disfigured people would stare at me in open-mouthed horror at grocery stores. Same goes for him. I destroyed him over the years. Emasculated him, made him feel worthless, refused sex often as a response to the horrible things he said to me. At the end I felt sub-human. May as well have been dead. He wrote something so profound the other day it took my breath away. Even if I could let go of all that came before my decision to leave, I know that the man who said those things to me, who made me feel that way, is still there. No matter how calm and awesome I am on my own I immediately devolve into the awful me I was for so much of our marriage. I want to make it work. Are you kidding me? The past year has been the most difficult of my life. Not seeing my children half the time is the easy way out? Separating finances and trying to afford everything on my own is easy? Feeling so lonely I ache is easy? Trying to negotiate parenting with someone who had totally different ideas than me even when we were married is the easy way out? Splitting holidays is easy? Eventually seeing another woman play mom to my kids and love the man I gave my life to for ten years will be the easy way out? But there comes a time when being together becomes more detrimental to your kids than separating. It becomes part of their DNA and they never forget. They might some day when their own marriage becomes as suffocating and torturous as water boarding no matter what they do. People change, emotions shift, perceptions are altered and it just stops working no matter how many hours of couples therapy you log. There comes a time when trying to continue marriage would be the equivalent of telling a gay person to ignore their sexuality and date the opposite gender.

### 5: Our Generation Is All Too Good At Taking The Easy Way Out

*'To take the easy way out, one might just chalk both up to blatant stupidity, but there are always other reasons as well.'*  
*'In most science exhibitions, there are student groups that take the easy way out and opt for a project that can be put together using easily available material.'*

This one has avocados, apples and grape tomatoes. It starts out as a sheet pan dinner, where everything is cooked together on a couple of sheet pans in the oven. Then you throw it all on salad greens to make a salad. You can always tell the really good ones. Mashup Mom at MashupMom. Her homepage says her name is Rachel, and that she is a librarian, blogger, mom, meal planner and recipe creator, but other than that, information is sparse. Some food bloggers are all about beautiful pictures. Other food bloggers want to help you conquer a specific challenge, gluten-free, paleo, low-fat, real food, low-carb. They have a particular dietary hobby horse and will try to woo you to it. Others cite their expertise with economy, putting food on the table at a price. Others are all about quick and easy preparation. And some are just about the taste and the joy of cooking. Mashup Mom, as her name might imply, does all of these things. At the same time. But what sets her apart from a lot of food bloggers is that she succeeds on every front. The menus and attached recipes all feed four people. She gives you a grocery list to buy what you need assuming you already have some staple items, olive oil, salt, pepper, basic spices. Now it gets freakily specific. And these are good meals. Heavy on fresh ingredients and very little prepared foods. Nothing takes more than an hour to prepare or requires any advanced kitchen skills. The menu is completely based on the Aldi sales circular for that week. It is not clear from a cursory examination of her website if she is affiliated with Aldi, or if they are paying her. They certainly should be. Aldi is not paying the Mount Airy News for this story, although they probably should be. This is good stuff. If you like to cook and you like to collect recipes, you know that you can come up with something good to eat every night. If you are good at shopping sales and being frugal, you could probably take the sales circular from your favorite store and compare it with a database of recipes you like to come up with the best things to eat that week. After you have set up and entered all of your recipes in a database, that is. So add minimal waste to the attractions of her plan. The only real downside is that anyone interested enough to follow the plans is probably going to chafe at the regimentation of it, and probably sooner rather than later. But then, the carefully orchestrated quantities might not work out. But a quick perusal of meat prices in any grocery store will make it clear why there is so much chicken. She also does some vegetarian meals: And some of those recipes are the very best. She makes it easy and no big deal. She also throws in a lot of fresh fruit, with minimal explanation. A menu will just say, cantaloupe, or grapes, or apples, with no additional information. Is it an appetizer, a side dish, a dessert? Or save it for dessert. The recipes go together easily. Best of all, this does not look like economy food. It is the opposite of that. And speaking of carts, Aldi charges a quarter deposit to use a cart, so bring some change. That could blow the whole experience for you. And apparently, their customers are cost-conscious enough that the system works. To give it a try, go to MashupMom. A lot of bloggers and services charge for meal plans, but these are free. At least so far. Here are a couple of recipes from recent weeks. This one is delicious and takes 30 minutes.
