

1: Inclusion Resources

Formerly published by Peytral Publications The Teacher's Guide to Intervention and Inclusive Education enables educators to quickly identify individual student's difficulties and strengths and then target intervention directly where it is needed.

This is a multi-step process: Review your curriculum to figure out which units will help you meet which year-end goals. Map out individual lessons within the units that align with these goals. For example, if you plan to have students complete a cross-curricular research project, you need to know when you will schedule a visit to the school or public library so that you can ask a parent or aide to support students with special needs.

Embrace Universal Design One of the buzzwords in contemporary education is universal design. This approach makes your curriculum accessible to all students, regardless of their backgrounds, learning styles and abilities. There are several ways for you to accomplish this feat: Relay content in diverse ways visually, verbally, written. Ask students to share what they are learning in diverse ways speaking, illustrating, writing. Utilize multiple materials to engage students software, art, theater, video, object lessons. Showing videos about the solar system. Making models of the planets. Visiting a science museum or planetarium with an astronomy display and program. Looking at books with images of the solar system. Making up songs, poems, rhymes and chants about the cosmos. Drawing or painting images of stars, meteors, galaxies and planets. Acting out a scene of astronauts in flight. However, integrating some basic, daily strategies can make a profound difference in your students. Organizing school supplies, art materials, learning centers and the classroom library teaches valuable life skills while making all students feel part of the classroom community. Being in charge of homework collection, attendance charts, computer equipment or record-keeping teaches organizational skills. Incorporating life skills training into your curriculum is not a one-time proposition. Employ Collaborative Teaching Techniques No classroom is an island, particularly an inclusive classroom. Two or more teachers shift roles between leading whole-class instruction, observing instruction and monitoring learning. One teacher leads small-group instruction while the other teacher works with the rest of the class. This model works particularly well if a small group requires reinforcement or reteaching to master a concept. This approach functions well when teachers require a high level of focus and participation from students. This technique helps students stay on task as they complete shorter activities and transition clearly from task to task. With many students, those with special needs and otherwise, a rigid behavior management plan will not serve you in every circumstance. For example, if you have a student who has a shorter attention span due to developmental issues, it is unfair to expect that student to stay focused on seatwork for as long as students with longer attention spans. It can list, with short phrases, symbols or cutouts, how to review work, put away supplies and find an independent task to do, such as writing in a journal, drawing in a sketchpad or reading a book from the classroom library. Posting a schedule and sticking to it. Encouraging peer instruction and leadership. Using signals to quiet down, start working and put away materials. Giving students folders, labels and containers to organize supplies. Checking in with students while they work. Speaking to students privately about any concerns. Employing specific, targeted positive reinforcement when a student meets a behavioral or academic goal. The Power of Inclusion Practicing these planning, teaching and management strategies is underscored by a recognition of the unique gifts of all your students. You model respect for and celebration of who they are as individuals. This appreciation transforms your room from a mere meeting place into a genuine community.
