These items contain a stem or premise and four 4 answer choices including only one 1 correct answer. Multiple choice, multiple response see example below. These are like multiple choice items except there are two or more correct answers. The item will tell you how many correct options there are. Fill in the blank see example below. You will be asked to provide a numeral, word, or phrase to complete the sentence. Drag and drop see example below. You will be asked to click on certain pieces of information and drag them with your cursor to place them in the correct position. Scenario questions present typical HR situations, followed by a series of exam items based on the scenario. These scenarios require you to integrate facts from different subject areas. Exam items may be phrased in the form of a question, as a statement or as an open-ended sentence. In all cases you should select the best correct response. This is done to assess your ability to make the right decision based on an actual workplace situation. All questions are classified based on one of the following cognitive levels: The performance data of every exam item, as well as every exam form, is carefully evaluated based on several statistical measures which are industry standard. This continuous review of items ensures that every exam is valid and reliable. HR subject-matter experts are involved in every step of the exam development process which is overseen by a professional testing organization. The following steps are taken to develop the exams: Each exam is based on an Exam Content Outline, which is drafted by a small group of HR subject matter experts and then validated through a formal practice analysis study. Every exam item is peer reviewed multiple times by other HR subject matter experts who verify that each item is accurate, current and appropriate for the exam. Exam forms are created and reviewed by another panel of subject matter experts. A passing score for each exam form is determined. The methodology used for this study involves a variety of actions including: Review of journal articles, job descriptions and other materials to determine current HR job responsibilities and expected future changes One-on-one interviews with HR practitioners, educators and hiring managers Collaborative work by HR subject-matter experts to draft an Exam Content Outline based on current research and information Validation survey of HR professionals to rate the frequency and importance of each job responsibility Review of survey findings by HR subject matter experts to further refine the draft outline and finalize percentage weightings for each exam section Our Certification Council must review and approve every new or revised certification exam content outline before it can take effect. We provide several months of advance notice of changes to exam content outlines. See more at www.ait.org. AITs are exam items that look and act differently than multiple choice questions. These can include items such as drag and drop, matching, fill in the blank and multiple choice, multiple response. For example, if there are several factors that must be considered before implementing a certain kind of program, we can present you with more than four options and ask you to select the three that are the correct factors. Similarly, if there are processes that need to occur in a certain order, we can assess your experience with applying the process by asking you to put them in order. In addition, rather than giving people options they can guess from, a fill-in-the-blank item requires you to supply the correct information yourself. How are AITs scored? HRCI exams contain a variety of items with different cognitive levels. Some items therefore require more thought or evaluation than others. Therefore, each scored AIT must be answered correctly to count. The passing score is set statistically based on factors like item difficulty so everyone has a comparable chance of success regardless of which test form they get. What can I expect at the test center? Most people find AITs very easy to use. However, your exam tutorial will also provide further guidance. The examples above will give you an idea of what these items might look like.

PSAT Test Format, Structure, and Question Types As of the fall of , all students will be tested using the new, redesigned PSAT. The new test format continues to test reasoning skills, but places a clearer, stronger focus on the knowledge, skills, and understandings most important for success after high school.

Moreover, analogical thinking is applied in almost every field of work. To draw similarities among things to explain unfamiliar things to students. To understand, assess and extend scientific theories. To form logical and relevant arguments. To draw comparisons between present and past situations for taking actions. To explain nature of information, truth or human experience. MAT Analogy Structure An analogy contains two pairs of terms, each pair based on the same relationship. The terms are represented as A: D signifying that A is related to B as C is related to D. The terms are typically words but can be numbers, symbols or word parts as well. One term in a test analogy is missing and it has to be selected from the four given answer options. The two pairs of terms come from the same subject area, but exceptions do exist, depending on the type of relationships among the terms. What are Analogy Questions based on? The kind of relationship that exists between the two given terms is the basis of the relationship between the incomplete pair of terms. Understanding the association in the given pair is basic to solving analogy questions. In most cases, this relationship is obvious at a glance; however, at times one has to analyze deeply to understand the connection. There exist four basic types of relationships among terms in the analogies Semantic: These are based on meanings of words and definitions of terms. They can be from any part of speech. These questions are further classified into four. The terms have similar meanings and show same concepts. The terms have opposite meanings and explain unlike concepts. One term shows the meaning of the other. These are based on the connection between different ideas. Nouns are generally used in such questions. The two terms are related on the basis of source, location or attribute. The two terms have reciprocal or sequential relationship. One term can even be the grammatical alteration of the other. One term causes, uses, requires, creates or depends on the other. These questions are based on compartmentalization of terms. They can be hierarchically related; one term could be the general category the other belongs to. One term belongs to a group and the other belongs to its subgroup. Both terms belong to the same group. One term is a constituent of the other. The terms are connected logically. The relation can be of two types Mathematical: One term is mathematically related to the other. The questions are based on life experience, society, work etc. The questions are based on algebra, arithmetic, money, geometry, numbers, probability and statistics. Numbers, symbols, words and their combinations are used as terms. Some amount of calculations might be required to establish the relationship between the terms given. The questions are based on literature, philosophy and fine arts covering authors and their works, philosophers and their ideas and performing arts, visual arts and other fine arts. Questions are based on biological sciences, physical sciences, history of science. Questions are based on rhetoric, grammar, word meanings and connotations, word parts, pronunciation and sounds. Three types of relationships are covered under these questions: Questions are based on economics, geography, political science, psychology and sociology. Many different types of relationships are represented in these questions. How to Solve Analogies Following are some tips that help solve analogy questions asked in the test. Do not ignore any answer option. Go through all the answer options. There shall be one or two answer options that can be rejected straightaway, as they are clearly wrong. Generally, two answer options are very close and confusing. Select the best answer option according to the relationship described by the given pair. Concentrate on all the possible meanings of the given words. At times, we tend to stick to the meanings of words as we commonly use them. Keep in mind alternative meanings of each of the given words to understand the relationships being described. In order to better establish the relationships between the given pair, you might have to rearrange them to form a proper sentence. Try to recognize the part of speech that the words belong to. The answer option should be the same part of speech as the corresponding word in the analogy structure. Eliminate the obviously wrong answer choices. This can be done on the basis of the part of speech, the meaning conveyed, obviously weak logic etc. Answer all the questions and deal with the difficult ones later on. All questions carry equal weight and hence there is

no point in spending too much time on difficult ones. It is a timed test and hence you need to keep a check on your speed. On an average, you shall have to solve each question in 30 seconds. Time management is hence crucial. There is no penalty for wrong answers. Thus, you can afford to make guesses. You should resort to guesses towards the end of the exam when little time is left for you to study the remaining questions. Understanding the relationships on which the test items are based can have a remarkable impact on your performance. Dealing with the questions technically shall be of great help. Conclusion It is not necessary that a poor vocabulary shall hamper your chances of success in the test. Though it is important for you to have knowledge of words used in different subject areas, your cognitive abilities are of a greater consequence in the exam. Practice, thus, can smoothen your rough edges and make you score well in MAT.
