

## 1: The Good Earth Questions and Answers - [www.enganchecubano.com](http://www.enganchecubano.com)

*The Good Earth is a novel by Pearl S. Buck published in and awarded the Pulitzer Prize for the Novel in The best-selling novel in the United States in both and was an influential factor in Buck's winning the Nobel Prize for Literature in*

However, the House of Hwang slowly declines due to opium use, frequent spending, uncontrolled borrowing and a general unwillingness to work. Meanwhile, Wang Lung, through his own hard work and the skill and hard work of his wife, O-Lan, slowly earns enough money to buy land from the Hwang family, piece by piece. O-Lan delivers three sons and three daughters; the first daughter becomes mentally handicapped as a result of severe malnutrition brought on by famine. Her father greatly pities her and calls her "Poor Fool," a name by which she is addressed throughout her life. O-Lan kills her second daughter at birth to spare her the misery of growing up in such hard times, and to give the remaining family a better chance to survive. During the devastating famine and drought, the family must flee to a large city in the south to find work. The family sells everything except the land and the house. Wang Lung then faces the long journey south, contemplating how the family will survive walking, when he discovers that the "firewagon" the Chinese word for the newly built train takes people south for a fee. In the city, O-Lan and the children beg while Wang Lung pulls a rickshaw. They find themselves aliens among their more metropolitan countrymen who look different and speak in a fast accent. They no longer starve, due to the one-cent charitable meals of congee, but still live in abject poverty. Wang Lung longs to return to his land. When armies approach the city he can only work at night hauling merchandise out of fear of being conscripted. One time, his son brings home stolen meat. Furious, Wang Lung throws the meat on the ground, not wanting his sons to grow up as thieves. O-Lan, however, calmly picks up the meat and cooks it. Meanwhile, O-Lan finds jewels in a hiding place in another house and hides them between her breasts. Wang Lung uses this money to bring the family home, buy a new ox and farm tools, and hire servants to work the land for him. In time, the youngest children are born, a twin son and daughter. He is eventually able to send his first two sons to school also apprenticing the second one as a merchant and retains the third one on the land. As Wang Lung becomes more prosperous, he buys a concubine named Lotus. O-Lan endures the betrayal of her husband when he takes the only jewels she had asked to keep for herself, the two pearls, so that he can make them into earrings to present to Lotus. Wang Lung finally appreciates her place in his life as he mourns her passing. Lung and his family move into town and rent the old House of Hwang. Wang Lung, now an old man, wants peace, but there are always disputes, especially between his first and second sons and particularly their wives. At the end of the novel, Wang Lung overhears his sons planning to sell the land and tries to dissuade them. They say that they will do as he wishes but smile knowingly at each other. Characters[ edit ] Wang Lung "poor, hard-working farmer born and raised in a small village of Anhwei. He is the protagonist of the story and suffers hardships as he accumulates wealth and the outward signs of success. He has a strong sense of morality and adheres to Chinese traditions such as filial piety and duty to family. He believes that the land is the source of his happiness and wealth. By the end of his life he has become a very successful man and possesses a large plot of land which he buys from the House of Hwang. As his lifestyle changes he begins to indulge in the pleasures his wealth can buy"he purchases a concubine named Lotus. O-Lan "first wife, formerly a slave in the house of Hwang. A woman of few words, she is uneducated but nonetheless is valuable to Wang Lung for her skills, good sense, and indomitable work ethic. She is considered plain or ugly; her feet are not bound. Wang Lung sometimes mentions her wide lips. Nevertheless, she is hardworking and self-sacrificing. Towards the end of the book, O-Lan dies due to failing organs. When she lies on her deathbed, Wang Lung pays all of his attention to her and purchases her coffin not long before her death. He desires grandchildren to comfort him in his old age and becomes exceedingly needy and senile as the novel progresses. He has strong and out-dated morals. He grows up as a scholar and goes through a rebellious phase before Wang Lung sends him south for three years to complete his education. He grows up to be a large and handsome man, and he marries the daughter of the local grain merchant, Liu. He becomes a merchant and weds a village daughter. The Poor Fool "first daughter and third child of O-lan and Wang Lung, whose mental handicap is caused by severe starvation during her infancy. As the years go by,

Wang Lung grows very fond of her. She mostly sits in the sun and twists a piece of cloth. Second Baby Girl  
â€” Killed immediately after delivery. Third Daughter â€” The twin of the youngest son. She is described as a pretty child with an almond-colored face and thin red lips. During the story, her feet are bound. Youngest Son  
â€” Put in charge of the fields while the middle and eldest sons go to school. Her first child is a boy. Her first child is a girl. Eventually becomes old, fat, and less pretty from the tobacco and fattening foods. Cuckoo â€” Formerly a slave in the house of Hwang. Becomes madame of the "tea house", eventually becomes servant to Lotus. Hated by O-Lan because she was cruel to her in the Hwang House. Pear Blossom â€” Bought as a young girl, she serves as a slave to Lotus. Dies from an accident in the fields because he was showing a fellow farmer how to work the fields. He is buried near the entrance to the family graveyard. Wang Lung plans to be buried nearest to him, but still on the family hill in the graveyard. He caused trouble for Wang Lung and others in the household for many years, until eventually Wang Lung gives him enough opium to keep him in a harmless stupor for the rest of his life. He is described as skinny, gaunt, and very self-defensive. He takes advantage of the tradition that requires younger generations to care for their elders, but completely disregards any moral obligation on himself. Very fat, greedy and lazy. Disrespectful and visits many concubines. Can be described as a sexual predator. There are, however, references to events which take place in Chinese history which, if accurately placed by the author, provide an approximate time frame; among these are the introduction of railroads and the Xinhai Revolution. The time spent by the family in the South probably Nanjing following the famine in their home of Anhui provides the best opportunity to approximate the time span of the novel. Railroads in China were not constructed until the end of the 19th century, with virtually no widespread development until after The train used by Wang Lung and his family is implied to be relatively new, which would place their departure to the South around this time. Accepting this as a starting point, earlier and later dates can be estimated according to the ages of characters and the seasonal crop cycles which are mentioned. If accurate, this would likely place the end of the novel after its date of publishing. If they had, Americans would have been fighting in Asia long before Spurling observes that Buck was the daughter of American missionaries and defends the book against charges that it is simply a collection of racist stereotypes. In her view, Buck delves deeply into the lives of the Chinese poor and opposed "religious fundamentalism, racial prejudice, gender oppression, sexual repression, and discrimination against the disabled. It disappeared after the exhibit, and in a memoir , Buck is said to have written, "The devil has it. I simply cannot remember what I did with that manuscript. The FBI were notified and it was handed over by the consignor. Life Magazine, 14 August

### 2: The Good Earth () - Rotten Tomatoes

*The earth is good./ The trees are good." In perhaps McMullan's most childlike watercolors to date, the artist connects the chant-like verse to the experience of a carefree boy exploring the great outdoors.*

This verdict, too, had respect to man as a species, and is not therefore annulled by the fall. In spite, therefore, of the serious responsibilities attendant upon the bestowal of freewill on man, we believe that the world is still for purposes of mercy, and that God not only rejoiced at first, but "shall rejoice in His works" Psalm Pulpit Commentary Verse Not simply good, but good exceedingly. It is not man alone that God surveys, but the completed cosmos, with man as its crown and glory, decu, set tutamen. And the evening and the morning were the sixth day. It seems unnecessary to add that this clay corresponds to the Cainozoic or tertiary era of geology, the Palaeontological remains of which sufficiently attest the truth of the Divine record in asserting that animals were anterior to man in their appearance on the earth, and that man is of comparatively recent origin. The alleged evidence of prehistoric man is too fragmentary and hypothetical to be accepted as conclusive; and yet, so far as the cosmogony of the present chapter is concerned, there is nothing to prevent the belief that man is of a much more remote antiquity than years. As of the other days, so of this the Chaldean tablets preserve an interesting monument. The saventh in the creation series, of which a fragment was discovered in one of the trenches at Konyunjik, runs: When the gods in their assembly had created Were delightful the strong monsters They caused to be living creatures Cattle of the field, beasts of the field, and creeping things of the field They fixed for the living creatures Cattle and creeping thing of the city they fixed And the god Nin-si-ku the lord of noble face caused to be two Matthew Henry Commentary 1: Good, for it was all just as the Creator would have it to be. All his works, in all places of his dominion, bless him; and therefore, bless thou the Lord, O my soul. Let us bless God for the gospel of Christ, and when we consider his almighty power, let us sinners flee from the wrath to come. If new-created unto the image of God in holiness, we shall at length enter the new heavens and new earth, wherein dwelleth righteousness.

## 3: The Good Earth (film) - Wikipedia

*The Good Earth, based on Pearl Buck's sprawling novel, is the story of a Chinese farming couple whose lives are torn apart by poverty, greed and nature.*

Orbit and turning[ change change source ] Earth turns at an angle an " axial tilt " in relation to its path around the Sun. Earth is part of the eight planets and many thousands of small bodies that move around the Sun as its solar system. The Solar System is moving through the Orion Arm of the Milky Way galaxy now, and will be for about the next 10, years. This is named a " leap year ". It is locked to Earth, so that it always has the same half facing Earth; the other half is called the "dark side of the moon". This is where the word " month " came from, even though most months now have 30 or 31 days. The Moon may have been formed after a collision between the early Earth and a smaller planet sometimes called Theia. Scientists believe that parts of both planets broke off " becoming by gravity the Moon. Condensing water vapour , and comets and asteroids hitting Earth, made the oceans. Within a billion years that is at about 3. This released a lot of oxygen , which was first taken up by iron in solution. Complex life on the surface of the land did not exist before the ozone layer. Earth was very different in the distant past. Long ago, almost all land was in one place. This is called a supercontinent. The earliest known supercontinent was called Vaalbara. Much later, there was a time the Cryogenian when Earth was almost entirely covered by thick ice sheets glaciers. Mercury , Venus , and Mars Earth is rocky. It is the largest of the rocky planets moving around the sun by mass and by size. It is much smaller than the gas giants such as Jupiter. Chemical make-up[ change change source ] Overall, Earth is made of iron Chemicals that are very uncommon such as gold and platinum can be very valuable. The structure of Earth changes from the inside to the outside. Oxygen is normally a gas but it can join with other chemicals to make compounds like water and rocks. The most common oxygen -having rocks are silica made with silicon , alumina made with aluminium , rust made with iron , lime made with calcium , magnesia made with magnesium , potash made with potassium , and sodium oxide, and there are others as well. The shape is called an oblate spheroid. As Earth spins around itself, the centrifugal force forces the equator out a little and pulls the poles in a little. The highest mountain above sea level "the well-known Mount Everest which is 8. Instead, the sleeping volcano Mount Chimborazo in Ecuador is; it is only 6. Because of this, Mount Chimborazo is 6, It is about What it is like inside[ change change source ] A picture of the inside of the Earth, showing the different levels. In fact, the air and the outside levels are much thinner than shown here The deepest hole ever dug is only about We know something about the inside of the Earth, though, because we can learn things from earthquakes and the times when volcanoes erupt. We are able to see how quickly the shock waves move through Earth in different places. The inside of Earth is very different from the outside. The surface also has a lot of oxygen , which comes from plants. Small and simple kinds of life can live far under the surface, but animals and plants only live on the surface or in the seas. Some rock is made when the hot liquid rock comes from inside the earth igneous rocks ; another type of rock is made when sediment is laid down, usually under the sea sedimentary rocks ; and a third kind of rock is made when the other two are changed by very high temperature or pressure metamorphic rocks. A very few rocks also fall out of the sky meteorites. Then, there is a thin liquid layer of heated rock the outer core. This is very hot: This solid middle part the inner core is almost all iron. This is what makes the Earth magnetic. The slow movement of the plates is what causes earthquakes , volcanoes and large groups of mountains on the Earth. There are three ways plates can come together. Two plates can move towards each other "convergent" plate edges. This can form islands such as Japan , volcanoes , and high mountain ranges such as the Andes and Himalayas. This gives the warm liquid rock inside the earth a place to come out. This makes their edges crush against each other and makes many shocks as they move. There are high places called mountains , and high flat places called plateaus. There are low places called valleys and canyons. For the most part, moving air and water from the sky and seas damages rocks in high places and breaks them into small pieces. The air and water then move these pieces to lower places. Because of this, the Earth would have been very flat a long time before now. The shape of the entire planet itself is not even a ball. Because of its velocity, Earth has a slight bulge at the

Equator. Other than that, Earth is shaped more like a pear than an actual sphere. All places on Earth are made of, or are on top of, rocks. The outside of the Earth is usually not uncovered rock. The fresh water people can drink is mostly ice. Only a very small amount is in rivers and under the Earth for people to drink and use. Also, much of the land on Earth is covered with plants, or with what is left from earlier living things. Places with very little rain are dry wastes called deserts. Deserts usually have few living things, but life is able to grow very quickly when these wastes have rainfall. Places with large amounts of rain may be large woods. Lately, people have changed the environment of the Earth a great deal.

### 4: Earth - Simple English Wikipedia, the free encyclopedia

*The Good Earth* is a American drama film about Chinese farmers who struggle to survive. It was adapted by Talbot Jennings, Tess Slesinger, and Claudine West from the play by Owen Davis and Donald Davis, which was in itself based on the novel of the same name by Nobel Prize-winning author Pearl S. Buck.

### 5: BBC - Earth - How nature is good for our health and happiness

*On we go, to the top 10 ways to know the Earth is unequivocally, absolutely, positively, % not flat! 1. The Moon. Now that humanity knows quite positively that the Moon is not a piece of cheese.*

I am part Chinese. A race that has given me these small eyes and this yellowish complexion. A race that I have associated with frugality, hard work, mass production, internet restrictions, and Jackie Chan. My Grandma, the real Chinese in the family, still brings Moon Cakes during the Chinese New Year and we do maintain fireworks when celebrating. We also drink herbal tea at home and have this uncanny favoritism for Chinese restaurants during family get-togethers. My only assurances were that it won the Pulitzer Prize and the author is a Nobel Prize winner. The Good Earth by Pearl S. Buck is a beautiful and sweeping story of farmer Wang Lu and his wife O-lan. The Land, the man, and their bond. This beautiful tale left me thirsty and craving for knowledge about this race that resides within me yet has not fully manifested itself. This may sound fancy but I have to say what I feel. This book made me fall in love with China, the Chinese culture, my Chinese roots. It whispers an earnest plea of the oldest kind, it whispers "Remember the land. In this age of technology, internet, GMOs and fast foods, we forget the land. We ignore the Good Earth that has sustained the lives of everyone before us, and lives of this generation. And his two sons held him, one on either side, each holding his arm, and he held in his hand the warm loose earth. And they soothed him and they said over and over, the elder son and the second son, Rest assured, our father, rest assured. The land is not to be sold. Each son telling his father "the land will not be sold" but inwardly smiling at this statement he knows to be untrue. Each son, each daughter, each generation, saying we will save this good earth. But for every tree he plants, he cuts down two more. For every bottle she recycles, she throws out two more. For every plot turned into a garden, there are two plots turned into garbage dumps. Each man, woman, son, daughter thinking about their self, their success apart from the land. They forget that their success lies with the land. They forget the Earth that has been good to them. It had come out of the earth, this silver, out of the earth that he ploughed and turned and spent himself upon. He took his life from the earth; drop by drop by his sweat he wrung food from it and from the food, silver. I will not discuss much of these issues and will only say in passing that a different culture enabled them to see nothing wrong with things we in modern times would consider abhorrent and terrifying. But I marvel at how Mrs. Buck was able to make it feel natural despite all these cultural differences. This speaks of her grace and her skill as a writer. She writes with a natural grace and an earnest plea. I am engrossed by her writing, her message, her book. The Good Earth is a timeless, moving story that depicts the sweeping changes that have occurred not only in the lives of the Chinese people during the last century, but also of everyone who has walked a part of this good earth. She traces the whole cycle of life: Her beloved and brilliant novel is a universal tale of the destiny of mankind.
