

### 1: Part Earth Temple - The Wind Waker HD Walkthrough

*The Earth's most spectacular environments are revealed in this unforgettable photographic collection. Dedicated to the beautiful forms and patterns the earth presents to the eye from above: here are awe-inspiring views of landforms on every continent, from mountains and seas to deserts, forests and even man-made environments.*

The King of Red Lions will start getting sucked towards the cyclone. You must use the Bow to shoot Cyclos with three arrows. After three hits - Cyclos will teach Link the Ballad of Gales. You will find an island covered in lava and flames - this is Fire Island. Shoot an Ice Arrow at the island in order to cool it off. Jump over to the island and climb to the top - using either the Deku Leaf or Side to get across the gap near the top. Fall down the hole at the top to find a mini-dungeon. Travel across the platforms floating in the lava to come to an area with 2 creatures and a giant head statue. Kill both of the creatures using the sword and a chest will appear inside the ring that contains the Power Bracelets. Pick up the giant statue and travel through the tunnel and into the portal to exit the mini-dungeon. Hop back onto King of Red Lions and warp to D6, then set sail east. Located in E6 will be Ice Island - similar to before, shoot a fire arrow towards the island to melt off a lot of the ice. Like before - journey across the island and jump down the hole located in the center of the island inside the mouth. Inside this mini-dungeon take the path to the right. After sliding across a few ice trails you will find a chest that contains the Iron Boots. Continue traveling right using the Iron Boots in order to walk through the wind. Teleport back outside and get back on the King of Red Lions. Jump onto the island at C7 and lift up the giant head statue to unlock a passage way. After the cutscene - warp to Dragon Roost Island in order to find Medli. Enter the home of the Rito and exit out through the top of the spiral trail. Turn right and use the Grappling Hook to swing across the gap. Climb up the ledge and small ladder to find Medli. One the short cutscene with Medli ends pull out the Wind Waker. Earth Temple Once inside, pick up Medli and jump across to the door while holding her. Take Medli through the door and travel up the stairs on the left of the room. Jump across to the pillar using Medli to float across. Now play the Command Melody and make Medli fly over to the other pillar and press the switch. Switch back to Link and press the other switch to unlock the door ahead. Control Medli once more and move her to the door. Use Link to pick her up and go through the door. In this room play the Command Melody to gain control of Medli. Use her Harp to reflect the light beam at the invisible chest on the small platform to get the Dungeon Map. Make sure to also shine the light at the Purple Chuchus to turn them to stone. Use the Skull Hammer to smash the petrified Purple Chuchus and then kill the others with the sword to unlock the door forward. Before leaving this room be sure to break the wooden planks blocking the top of the cauldron. In the next room take control of Medli. Use her to shine right light beam into the fog in order to uncover a stake. Now switch back to Link and use the Skull Hammer and smash it to unlock the next door. Enter through the door to find some coffins and another invisible chest. Simply climb up the ladder on the left side of the room and pull the block towards you until it fall into the grove. This will cause a beam of light to shine into the room. Now take control of Medli and shine the light beam onto the chest to acquire a small key. Pick up Medli and head back through the door we came from after making to kill the Floormasters. Travel to the locked door directly in front of the one you just went through. Now use the Fire Arrows to burn the curtain on the wall to the left to allow light into the room. Make sure to kill all of the Chuchu except the Purple ones. Now stand in the center of the light and wait for the Purple Chuchus to jump into it and become petrified. Pick them up and place them on the switches and run up the newly spawned stairs. Push the block off the side of the ledge to create a way back up as well as unlock the door. Control Medli and fly up to the door near Link. Switch back to Link and carry Medli through the door. Kill the Floormaster and then push the block nearest the door towards the fall to open up a beam of light. Use Medli to shine light on the statue on top of the other block as well as on all of the yellow symbols on the walls. Now use Link to push or pull all of the blocks as far as possible so they fall into their respective grooves and unlock the door forward as well as spawn a chest containing the Compass. Pick up Medli and travel through the door. Kill all of the Moblins in this room and then fly Medli onto the upper ledge with the light beam. Shine the light at the poes in order to make them vulnerable. Now use Link to kill them with the sword. This

will unlock a small set of stairs but do not go up them just yet. Use Medli to shine the light on the three statues on the opposite side of the light beam to unblock a chest that contains a Joy Pendant. Pick up Medli and travel up the stairs. Go through the door on the left. Leave Medli on the ledge and jump down near the coffins. Go near the one on the right to find a small key. Go around to each of the remaining coffins one at a time killing off the ReDeads to make the ladder drop down. Now take Medli back through the door and go through the locked door for a mini-boss. Stalfos Defeating the Stalfos is actually quite simple. Run up to it and attack it repeatedly with the sword. If the Stalfos starts acting like it is about to attack, throw the boomerang at it to stun it. After several attacks with the sword the body will break down leaving the head. Attack the head repeatedly in order to defeat the Stalfos. There will be a total of 3 of these you will have to defeat. Once all of the Stalfos are defeated a chest will spawn containing the Mirror Shield. Use the Mirror Shield to shine a beam of light onto the emblem above the door in order to unlock it. Go through the door and back down the stairs to defeat all of the creatures once more. Take control of Medli and fly back up to the light beam and reflect towards the chest on the opposite side of the room. While holding this position switch back over to Link. Use the Mirror Shield to reflect the light beam back across the room onto the yellow symbol beneath Medli. Now pick up Medli and travel into the newly opened passage and through the door. Use Medli to float across the fog to the other side of the room. Carry Medli through the door where we got the first small key and place her on the switch near the door. Go inside the door to find a light beam and a wall with yellow symbols. Use the Mirror Shield to shine the light beam onto the yellow symbols to unlock a chest containing a Joy Pendant. Travel back through the door and carry Medli back to the room with the fog. Use Medli to shine light onto one of the eyes of the face in the middle of the room and hold this position. Switch back to Link and shine light onto the other eye of the face. This will create a path of stairs leading down to a door. Pick up Medli and go through this door. Continue down the spiral stairs to find a draw bridge. Kill the floating creatures with ice arrows and carry Medli across the bridge to the stone tablet. Pick up Medli and go through the door. Kill all of the ReDeads in this room and then use the Mirror Shield to shine light on the statue in the middle of the room as well as the statue on the right of the room. Grab Medli and enter the door. This room will be full of fog and Floormasters. Simply roll quickly down the center of the room to find a chest containing a small key. Pick up Medli and return to the previous room. Stand in the beam of light and reflect it onto the mirror on the left side of the room to break the statue. Take Medli with you through the door that was behind the statue. Leave Medli near the door and quickly roll through the fog to the other side of the room.

### 2: The Miniature Earth Project - Home

*The Earth (MiniCube) by Alberto Bertolazzi Here is a spectacular, thought-provoking, and highly informative guide to the fascinating story of the Earth. Full-color photography of geological equipment, rocks, minerals, and 3-D models reveals the ideas and discoveries that have changed our understanding of the world in which we live.*

Grab the bendy straws. Put them together like this diagram: Make 4 sides that look like the diagram above. Notice the bottom gray straw is straight. If the bendy straw sticks out, cut the excess length. Tape the straws together in all the red areas. The finished model should be a cube with no roof or bottom. Making those parts would be a waste of material. Wrap the plastic wrap around the cube so that it forms a complete cube and there are no openings. You may build multiple cubes to test how a thicker wrapping of plastic affects the temperature. Draw or print out a chart. Here is an example: Make sure it is in direct sunlight. Look at your thermometers. Record the starting temperatures in the 0 minute boxes. Make a small slit through the roof of the cube and tape the thermometer inside the cube. Make sure it does not touch the ground. Use your watch, clock or timer to write down the temperature inside and outside the cube every 1 minute. After 5 minutes, move your cube and the thermometers into the shade. Record the temperatures in the shade every 1 minute. After 5 minutes, you should have completed your chart. Go inside and look over the data. Write down what differences you saw in the cube and outside the cube. How did the temperatures differ? Did the speed of the increase or decrease of temperatures differ? Which cube was hotter in the sun? Which cube was colder in the shade? Disclaimer and Safety Precautions Education. In addition, your access to Education. Warning is hereby given that not all Project Ideas are appropriate for all individuals or in all circumstances. Implementation of any Science Project Idea should be undertaken only in appropriate settings and with appropriate parental or other supervision. Reading and following the safety precautions of all materials used in a project is the sole responsibility of each individual.

Some of our websites contain links to other sites. By clicking on these links, you will leave the website operated by Bonnier and this Privacy Policy will no longer apply. How we use the information we collect We use the personally-identifying information that you provide us to fulfill your

requests for our products, programs, and services, to respond to your inquiries about offerings, and to offer you other products, programs, or services that we believe may be of interest to you. We sometimes use this information to communicate with you, such as to notify you when you have won one of our contests, when we make changes to subscriber agreements, to fulfill a request by you for an online newsletter, or to contact you about your account with us. We do not use your personal information to make automated decisions. We may syndicate the publicly available content of our community areas to unaffiliated third-party websites, using RSS or other technologies. The information you have shared in the community areas may be included in this syndication. We will use the personally-identifying information that you provide about others in order to provide the products or services that you have requested; for example, to enable us to send them your gifts or cards. These lists will never contain sensitive information. If you do not wish for your e-mail or postal address to be shared with companies not owned by Bonnier who want to market products or services to you, you have the opportunity to opt out, as described below. You may also opt out of the receipt of any marketing materials from Bonnier as described below. We may transfer your sensitive personally-identifying information to other Bonnier offices for internal management and administrative purposes. In addition, your personal data will be transferred to other Bonnier offices where necessary for the performance or conclusion of our contractual obligations to you or for your benefit. Transfers of personally-identifying information may also be made where necessary for the establishment, exercise, or defense of legal claims. We do not transfer personal information internationally. Bonnier will only share your sensitive personal information with outside companies or individuals in any of the following limited circumstances: When we use trusted businesses or persons to process personal information on our behalf. Before sharing any personal information with outside parties, we require that these parties agree to process such information based on our instructions and in compliance with this Privacy Policy and any other appropriate confidentiality and security measures. Before we share your sensitive personal information outside of the previously listed circumstances, we will ask you for permission first. Please note that this only applies to sensitive information, as defined above. We may also use, transfer, sell, and share aggregated, anonymous data about our users for any legal purpose, such as analyzing usage trends and seeking compatible advertisers and partners. In no event will this aggregated data contain any information that could be used to identify individual users of our products or services. How we protect the safety and integrity of the information we collect We take appropriate physical, electronic, and procedural measures to safeguard and protect your personal information. We use a variety of security measures, including encryption and authentication, to maintain the confidentiality of your personal information. We store your personal information on systems behind firewalls that are only accessible to a limited number of persons, each of whom is required to keep the information confidential. When you transmit sensitive personal information to us, like credit card information, we offer the use of a secure connection to our servers. To the extent you select the secure connection method or your browser supports such functionality, all credit card account information that you supply is transmitted via secure encryption technology. We will provide notice if we become aware of any security breach that may affect any sensitive personal information pertaining to you that we have stored on our systems. Bonnier employees, agents, and contractors who have access to personally-identifying information are required to protect this information in a manner that is consistent with this Privacy Policy and may not use the information for any purpose other than to carry out the services they are performing for Bonnier. These individuals are bound by confidentiality obligations and may be subject to discipline, including termination and criminal prosecution, if they fail to meet these obligations. Bonnier only collects personal information that is relevant to the purposes for which it will be used. Though we do take appropriate steps to review and update the information that we store to ensure that it is accurate, complete, and current, we also depend on you to update or correct your personal information when necessary. You may correct or delete any or all of the personal information you have provided to us at any time. Many of our websites provide means to review and update the personal information that you have provided on that website. To inquire about personally identifiable information that Bonnier has collected about you, or about other ways to correct factual errors in that information, please send us an e-mail at [privacy@bonniercorp.com](mailto:privacy@bonniercorp.com). Do not use this email address to send questions about your subscription. To protect your privacy

and security, we will take reasonable steps to help verify your identity before granting access or making corrections. We will decline to process requests where we cannot verify the identity of the requester. We may also decline to process requests that are automated, repetitive, systematic, or impractical, or that might jeopardize the privacy of others. In some limited circumstances, such as to resolve disputes, troubleshoot problems, and enforce our policies, we may retain some of information that you have requested us to remove. Therefore, you should not expect that all of your personal information will be completely removed from our databases in response to your requests. We only use the information we collect for purposes consistent with this policy. If we propose to use your personal information for purposes beyond that explained in this policy, we will provide appropriate notice before doing so and we will provide you with the means to opt out of those uses. We will not use your sensitive personal information for any purposes other than those described in this Policy unless we have obtained your consent. Your privacy options If you prefer not to receive e-mail communications from other companies, you may choose to remove yourself from any e-mail lists that we provide to third parties for marketing purposes by sending us an e-mail at [emailoptout@bonniercorp.com](mailto:emailoptout@bonniercorp.com). You will still receive information from Bonnier and its various brands, but we will not share your address information with anyone else. If you prefer not to receive postal communication from other companies, you may choose to remove yourself from any postal mailing lists that we provide to third parties for marketing purposes by sending us an e-mail at [emailoptout@bonniercorp.com](mailto:emailoptout@bonniercorp.com). Orbit and turning[ change change source ] Earth turns at an angle an " axial tilt " in relation to its path around the Sun. Earth is part of the eight planets and many thousands of small bodies that move around the Sun as its solar system. The Solar System is moving through the Orion Arm of the Milky Way galaxy now, and will be for about the next 10, years. This is named a " leap year ". It is locked to Earth, so that it always has the same half facing Earth; the other half is called the "dark side of the moon". This is where the word " month " came from, even though most months now have 30 or 31 days. The Moon may have been formed after a collision between the early Earth and a smaller planet sometimes called Theia. Scientists believe that parts of both planets broke off â€” becoming by gravity the Moon. Condensing water vapour , and comets and asteroids hitting Earth, made the oceans. Within a billion years that is at about 3. This released a lot of oxygen , which was first taken up by iron in solution. Complex life on the surface of the land did not exist before the ozone layer. Earth was very different in the distant past. Long ago, almost all land was in one place. This is called a supercontinent. The earliest known supercontinent was called Vaalbara. Much later, there was a time the Cryogenian when Earth was almost entirely covered by thick ice sheets glaciers. Mercury , Venus , and Mars Earth is rocky. It is the largest of the rocky planets moving around the sun by mass and by size. It is much smaller than the gas giants such as Jupiter. Chemical make-up[ change change source ] Overall, Earth is made of iron Chemicals that are very uncommon such as gold and platinum can be very valuable. The structure of Earth changes from the inside to the outside. Oxygen is normally a gas but it can join with other chemicals to make compounds like water and rocks. The most common oxygen -having rocks are silica made with silicon , alumina made with aluminium , rust made with iron , lime made with calcium , magnesia made with magnesium , potash made with potassium , and sodium oxide, and there are others as well. The shape is called an oblate spheroid. As Earth spins around itself, the centrifugal force forces the equator out a little and pulls the poles in a little. The highest mountain above sea level â€”the well-known Mount Everest which is 8. Instead, the sleeping volcano Mount Chimborazo in Ecuador is; it is only 6. Because of this, Mount Chimborazo is 6, It is about What it is like inside[ change change source ] A picture of the inside of the Earth, showing the different levels. In fact, the air and the outside levels are much thinner than shown here The deepest hole ever dug is only about We know something about the inside of the Earth, though, because we can learn things from earthquakes and the times when volcanoes erupt. We are able to see how quickly the shock waves move through Earth in different places. The inside of Earth is very different from the outside. The surface also has a lot of oxygen , which comes from plants. Small and simple kinds of life can live far under the surface, but animals and plants only live on the surface or in the seas. Some rock is made when the hot liquid rock comes from inside the earth igneous rocks ; another type of rock is made when sediment is laid down, usually under the sea sedimentary rocks ; and a third kind of rock is made when the other two are changed by very high temperature or pressure metamorphic rocks. A very few rocks also fall out of the sky meteorites. Then, there is a thin liquid layer of heated rock the outer core. This is very hot: This solid middle part the inner core is almost all iron. This is what makes the Earth magnetic. The slow movement of the plates is what causes earthquakes , volcanoes and large groups of mountains on the Earth. There are three ways plates can come together. Two plates can move towards each other "convergent" plate edges. This can form islands such as Japan , volcanoes , and high mountain ranges such as the Andes and Himalayas. This gives the warm liquid rock inside the earth a place to come out. This makes their edges crush against each other and makes many shocks as they move. There are high places called mountains , and high flat places called plateaus. There are low places called valleys and canyons. For the most part, moving air and water from the sky and seas damages rocks in high places and breaks them into small pieces. The air and water then move these pieces to lower places. Because of this, the Earth would have been very flat a long time before now. The shape of the entire planet itself is not even a ball. Because of its velocity, Earth has a slight bulge at the

## THE EARTH (MINICUBE) pdf

Equator. Other than that, Earth is shaped more like a pear than an actual sphere. All places on Earth are made of, or are on top of, rocks. The outside of the Earth is usually not uncovered rock. The fresh water people can drink is mostly ice. Only a very small amount is in rivers and under the Earth for people to drink and use. Also, much of the land on Earth is covered with plants, or with what is left from earlier living things. Places with very little rain are dry wastes called deserts. Deserts usually have few living things, but life is able to grow very quickly when these wastes have rainfall. Places with large amounts of rain may be large woods. Lately, people have changed the environment of the Earth a great deal.
