*The funniest dinosaur book ever! [Joseph Rosenbloom] on www.enganchecubano.com *FREE* shipping on qualifying offers. A collection of easy-to-understand jokes and riddles about dinosaurs.*

Who would want an ordinary pet for Christmas if it was possible for Santa to bring a real live dinosaur? William Trundle loves all things connected with dinosaurs. The only thing that he wants this year is a dinosaur of his very own. Believing is the key to the Christmas season and believing in the magic of the season is important for both children and little dinosaurs. The big bang occurs and all the adult dinosaurs are gone from the earth. The egg is frozen when the Ice Age comes and remains frozen for thousands of years. The shiny egg actually has something inside! They must get the egg back to Santa because he is the only one who will know what to do with the egg. The elves carry the egg back to the North Pole Snow Ranch and Santa decides that he must sit on the egg to keep it warm. Santa is the only one who has a bottom large enough to cover this strange egg! Santa is faithful day after day, and finally the egg hatches. The little Christmasaurus is sad because he knows that he is different. He wants to be like the reindeer, but that is not possible. The North Pole is buzzing with activity to prepare for Christmas Eve. Down below, William writes his letter to Santa and asks for the coveted dinosaur. Santa receives the letter and gets to work creating a stuffed dinosaur that looks exactly like the Christmasaurus. The stuffed dinosaur is placed on the sleigh ready for the big ride of the night. Santa is unaware that the Christmasaurus is also on board for the Christmas Eve ride to deliver all of the toys. Fletcher writes with creativity and imagination. His elves enjoy singing, and he includes "The Elves Songbook" as an addition to the book. He also includes a list of his top 10 favorite things about Christmas. It is recommended for ages and has an ISBN of This is a must-read for the season. Teachers who teach reading and language arts for ages will find this delightful book to be a source for a wealth of ideas for the holiday season. The book can also be assigned for young readers to read on their own for later creative writing projects. Take a class poll of what your students want for Christmas. A creative writing assignment provides students the opportunity to write their own song or poem for the season. Offer a creative writing assignment that presents students with the opportunity to compare the Hunter with the Grinch. Students can make a list of their top 10 favorite things about Christmas. Creative Writing Projects with The Christmasaurus Do you use creative writing projects to enhance interest in reading?

Which dinosaur is the largest? The biggest dinosaur is probably ultrasauros. We only have a few bones of this late Jurassic million years ago plant-eater from Colorado, but the bones show an animal who was six-stories high and may have weighed more than 50 tons. A four-legged plant-eating dinosaur found recently in Argentina, argentinasauros, may have been even heavier than ultrasauros. The biggest plant-eaters were tons and feet long! What was the smallest dinosaur? The smallest dinosaur that we know of was a meat-eater million years old from Nova Scotia which was the size of a little robin. But we know it only from footprints, and maybe that was only a baby. As for full-grown fossil dinosaurs, the smallest are the little bird-hipped plant-eaters like lesothosaurus, which were only the size of big chickens. Compsognathus, a meat-eater the size of a turkey, is often called the smallest, but that was information based on a skeleton that belonged to a young, not yet full-grown animal. Which dinosaur was the strongest? The strongest was probably the biggest, ultrasauros, who was six-stories high. Or, among meat-eaters, T. In the book *The Biggest Dinosaurs* by Michael Berenstain, it says that the seismosaurus, found in Mexico, might be larger than the ultrasaurus. Do you know if it is? Ultrasaurus was the biggest we know, but we only know it from a few bones. It appears to be a brachiosaur, which was giraffe-like and heavily built. Seismosaurus was indeed longer, the longest we know, and we know it from a whole back end. It was a diplodocus relative, a longer-bodied animal with a whip tail but not so heavily built. It comes from New Mexico. How heavy and how tall was gigantosauros? I figure you are asking about giganotosauros, the newly named biggest of all meat-eaters. The name means giant of the south. From most of the skeleton it is estimated to be about 46 feet long and 8 tons in weight. Meat-eaters leaned forward with their tails held high, so they were nearly horizontal over their hips. There is also a gigantosauros. It is a big plant-eater with four legs, like brachiosaurus. It is known from just a few bones from England found more than a century ago. What is the largest dinosaur bone ever found? The biggest single dinosaur bone, by weight, is one of the backbones of argentinosauros. One backbone was five feet by five feet and more than one ton in fossil weight. Of course it was lighter when the animal was alive before minerals entered into it to preserve it. The largest bone group ever found was the hip area of the supersaurus, another four-legged plant-eater. Brigham Young University researchers dug it up in Colorado about five years ago. It is about six feet wide and up to eight feet tall. The biggest skull ever found was the eight foot long skull of torosauros, a horned dinosaur which ate plants near the end of dinosaur time in the American West. It was discovered by the Milwaukee Public Museum crews about eight years ago. What is the smartest dinosaur? What dinosaur had the largest brain? The smartest dinosaur, if you compare body size to brain size a rough measurement of intelligence is troodon. Troodon was a meat-eater the size of a man, with a brain as big as an avocado pit. The biggest brained dinosaur of all was probably T. Its brain was about as big as ours but it was many times bigger than us. Stegosaurus was a tiny-brained dinosaur compared to its size. How old is the oldest dinosaur? The oldest dinosaurs known are million years old, such as eoraptor, a dog sized meat-eater found in Argentina. Eoraptor means "dawn thief. What was the most ferocious dinosaur? The scariest dinosaur was probably T. Or perhaps Utahraptor, a giant raptor 20 feet long, with a huge killer toe and hand claws and sharp teeth. What was the speed of the fastest dinosaur? The fastest dinosaurs were probably the ostrich mimic ornithomimids, toothless meat-eaters with long limbs like ostriches. They ran at least 25 miles per hour from our estimates based on footprints in mud. What were the smallest and biggest eggs ever found? The biggest dinosaur eggs we know are shaped like giant footballs and are about 19 inches long. They belong to a meat-eater from Asia called segnosaurus. Which dinosaur has the longest neck? The longest necked dinosaur was the foot mamenchisauros, a four-legged plant-eater from China. Its neck alone was 32 feet long – nearly as long as a school bus. Which dinosaur was nicknamed "long neck"? And which one really had the longest neck? The longest necked dinosaurs were the giant plant-eaters, the sauropods which included apatosaurus and particularly mamenchisauros. That dinosaur, from China, had the longest neck of any animal ever, more than

THE FUNNIEST DINOSAUR BOOK EVER! pdf

33 feet long on a body about 85 feet long. Which dinosaur had the biggest head? The biggest-headed dinosaur was torosaurus, "bull lizard," a horned dinosaur related to triceratops which lived in the American West 65 million years ago. It had a skull eight feet long, longer than any animal on land ever. Which Mesozoic period had the smallest dinosaur? The smallest dinosaurs were probably from the late Triassic and early Jurassic. Dinosaurs got biggest in the late Jurassic and Cretaceous. Did the ankylosaurus have the hardest shell? Ankylosaurs sure had hard shells, even on their eyelids! Hard to say which was hardest of any dinosaur though. Same for sharpest teeth. What is the ugliest dinosaur? I think the eankylosaurs were really ugly "squat and covered with armor. How do we know that the Tyrannosaurus rex was the meanest dinosaur? But we do know he had the strongest jaws and the biggest teeth of any meat-eater and that he was the biggest, so we guess that he might have been the meanest. One scientist says Utahraptor was meaner, even though it was just 20 feet long. But it had huge claws on its toes and fingers, weapons T.
