

1: Measuring the Immeasurable: GRIT in Education – A.J. JULIANI

Within a few short months, he found himself at the joystick of the U.S. Army Air Force's newest secret weapon: the G Stands for Guts tells the story of military gliders and the men who flew-and died-in them.

Larry Rogers, MD, who volunteered to serve as a medical doctor in Vietnam during the most intense phase of fighting--the days and months leading up to the infamous Tet Offensive. Slogging through streams and jungle, he and his colleagues weathered not only fire fights and rockets attacks but scorpions and deadly snakes Their sacrifices generally went unrecognized and unappreciated by a mostly indifferent nation. But a massive influx of American troops would soon alter the entire nature and perception of the war Vietnam and the one inside his head. In case you missed it, you can still read my second post here. They know, and the research verifies, that GRIT fuels retention, completion, and gainful employment. Or, as my good friends Professor Amy Baldwin and Dr. As GRIT becomes white-hot in the milieu of ideas, our efforts to grasp it, gauge it, and grow it are evolving, dramatically. The seismic shift in our understanding of GRIT has two parts. First, when it comes to the GRIT it takes to flourish, we now know that quality often trumps quantity. Second, we now know that the guts of GRIT are about more than pure perseverance. Asking successful students, professors, advisors, counselors, and staff how to tackle a given challenge, or best strategize for success, are just a handful of Growth-related behaviors that can make all the difference in whether one stays or drops out, finishes or falters. Resilience is your capacity to make good use of, to respond constructively to adversity. The more resilient you are, the more you tend to harness it, using it to propel you to a place you would never have attained without the adversity. Harnessing adversity is the first generation, poverty-level college student, working two jobs supporting herself and her children, doing whatever it takes to get that degree, because of the horrendous conditions from which she came, and the ticket that degree earns her to a better life. When we gauge GRIT, those who score higher on Resilience, tend to be unfazed, if not juiced by adversity. Iâ€™”Instinct Some instincts are genetic. Others you can grow. When it comes to GRIT, Instinct is your gut-level propensity to pursue the right goals in the best possible ways. We can all ever-improve our ability to fortify our choices on both the quality of goals we pursue, and our strategies for achieving them. The faculty member who uses power and intimidation instead of creativity and inspiration to engage students is pursuing the right goal engaging students in less-than-optimal ways. Tâ€™”Tenacity To many people, this is the classic essence of basic grit. Students who refuse to give up even when their grade is sagging, their group is failing, their comprehension is nil, their health suffers, or their funds fall short, are the ones who forge forward long after most mortals would fold. Done right, the same brand of Tenacity that gets them through, can get them what they want from life. Yet, while Tenacity is essential, it is also incomplete. Stay tuned for future blog posts as we delve deeper into GRIT, the science behind it, and what educators and employers can be doing now to help individuals dramatically fortify their career path and life goals. About the Author Dr. Developing effective strategies toward college completion â€™” and sustainable employment â€™” has never been timelier.

Glider pilots are unknown heroes of World War II. Their bravery is captured in the documentary "Silent Wings". Back in the summer of , I was a brand new sophomore (or three degree) at the Air Force.

A friend and I loaded a couple of kayaks into his boat and carried them across the sound to a barrier island. The island was deserted so we anchored the boat safely, unloaded the kayaks, and proceeded to paddle through the inlet on our way to the ocean. With a little practice you can ride waves just like a surfer. It was all fun and games until something terrible happened. A wave flipped me off. So there I was, far from shore and stranded just treading water. Having grown up on the beach, I was not worried. I just turned around and started swimming toward the overturned kayak. I was not moving. No matter how hard I swam, the current pulled me the other way. I was caught in a rip current. A rip current is like a river in the surf that pulls the water away from shore. They are hard to see but very real. I watched helplessly as my kayak bounced around on top of the water, the wind blowing it further and further from my reach. My buddy was too far away. He did not even notice what was happening. I started to get scared. The water was sucking me the wrong way. It was carrying me away from the kayak and away from the shore. It was all I could do to keep my head above water. Finally, my friend came within ear shot. I yelled for help. He paddled up to me, and I grabbed on the back of his kayak. I hardly remember the short ride back to the beach, but I do recall stumbling up the sand, laying down, and thanking God that my stupidity did not kill me. I shared this story to talk about guts. My pastor says that there is nothing about this life that pushes you toward spiritual maturity. You have to do it on purpose. The same is true for ethical maturity. The courage to go against the norm. Have you ever heard: Poor ethical judgement is a big deal. It cripples a company. It does not matter where the bad decisions are being made. Bad moral decision are like a cancer that will eat away at the top, middle, and bottom of any organization. The current may be strong, but courageous leaders stand their ground. It takes guts to paddle against the tide and do what ought to be done.
