We thought it was high time to do a sequel. Over the past twenty-five years, GRAIN has worked with social movements and organisations around the world to defend local food systems and cultures from the advance of industrial agriculture. Climate change is one important example of this. During the past five years, we have pulled together the available data to show how the industrial food system is a major driver of climate change and how food sovereignty is critical to any lasting and just solution. With governments, particularly those from the main polluting countries, abdicating their responsibility to deal with the problem, it has become ever more critical for people to take action into their own hands. Changing the food system is perhaps the most important and effective place to start. The various articles on climate change selected for this book should provide readers with solid information about how the industrial food system causes climate change, how food and agribusiness corporations are getting away with it and what can be done to turn things around. Other chapters provide a picture of how this climate-killing food system is expanding through the consolidation of corporate control over lands, seeds and markets, and how struggles are under way to stop it. We hope this book will help readers to better understand the ways in which corporations seek to increase their control over the food system so that this control can be more effectively challenged. We hope it will inspire people to take action and we hope that it will provide readers with some information and analysis that they can use directly in their own work.

**Food and climate change:** This book is a must read for movements addressing climate change as well as Seed and Food Sovereignty. It shows that industrial corporate agriculture is a major part of the climate crisis, and small scale ecological farming is a significant solution. It also alerts us to the false solutions being offered by those who created the problem – the Exxons of Agriculture. This book lifts up the voices of indigenous and peasant farmers around the world, comprehensively explaining why their fight to stop the industrial food juggernaut is the same as the fight for a habitable, just planet. This is fine work that will provoke much new activism! The time has come to change the system, not the climate. Our farmers and indigenous peoples can cool the planet!

**Climate crisis, toxic industrial agriculture and dirty energy:** It is based on solid evidence and excellent analysis. The link between climate and agricultural activities is essential to contribute to a solution and GRAIN does not hesitate to denounce responsibilities and to indicate efficient ways for action. The capital-driven industrial agriculture and food system is a totalising enclosure of the commons that affect not only land, but almost every factor in food production, particularly seeds. This book is very valuable to all those who are concerned about the changes in the food system and its linkage to climate change. It captures and analyses the critical forces and dynamics in industrial agriculture and food system, as well as offering ways to change it. It is also available at Amazon and other electronic book outlets. French and Spanish editions are also available.

### 2: Stage is set for Great Fairy Bridge Robbery - Project 21

*The Great Fairytale Robbery by Eric Scott, John Regan & Deanne Scott. The evil head of a TV studio is determined to rid the world of children's books, and sets out to destroy fairytale and pantomime characters.*

Fortunately, most of us are sane enough not to let it get further than a thought. Below are a few men who were not. The only criteria for entry on this list is that they must have gotten away with it, at least temporarily. Anyone caught in the act does not qualify for this list. Whether it be cash, jewels, art or anything else worth big bucks, you can bet there is someone, somewhere, planning on stealing it. I have roughly adjusted for inflation of some of the older robberies to show where they compare to some of the modern monster hauls. Incredibly, no one was killed during any of the below robberies as far as I can tell, the mark of true professionals. Feel free to add any others I may have missed in the comments section. This list was originally sent in as a top 20, but it has been broken up due to the size of the items – the second installment will appear in the future. They cleaned the place out, without firing a shot. The store had been robbed the previous year, where thieves netted 10 million euros worth of jewels. One would think that perhaps it would be cheaper hiring some armed guards than getting robbed on a yearly basis. Good to see there is no age discrimination among thieves. The city has seen its fair share of heists, but this one was incredible in both dollar value and the method with which it was executed. Leonardo Notarbartolo, a 30 year career thief, was the leader of this stylish gang. The robbery was years in the making, with at least 4 people involved. They had rented office space in the building 3 years earlier, where Leonardo posed as an Italian diamond merchant to gain trust and credibility. He set up meetings and did small deals, no one ever suspecting a thing. When it was finally time to move, they inserted fake tapes into the security cameras to cover their movements. The vault was protected by 10 layers of security, including infrared heat detectors, Doppler radar, a magnetic field, a seismic sensor, and a lock with million possible combinations. Notarbartolo was caught after one of his accomplices failed to burn a garbage bag of evidence. He believes that he and his gang were used as part of a huge insurance fraud. Police have denied this possibility. To read his version of events, outlining how they did it, go here. At the time, it was a world record amount. Due to the nature of safe deposit boxes and their undeclared contents, only an estimate is possible. They were eventually apprehended by the FBI. One of the men involved, Phil Christopher, has written an account of the robbery in the book *Superthief*. This haul is the largest diamond heist in history. Whilst many of the other robberies on this list involve elegant planning and flawless execution, this was more akin to a smash and grab. KLM is a major Dutch airline. On February 25th, the thieves drove right up to a KLM truck that was carrying a large haul of uncut diamonds intended for delivery to Antwerp. In full view of many witnesses, they ordered the drivers out at gun-point and simply got in the truck and drove it away. Due to the fact that they knew exactly which truck to target, police suspect an inside job. It was the second time in 6 months that the airport terminal had been breached. Several men have been arrested in connection to the robbery. They were at war. And wars cost money. Lebanon was in the midst of a civil war, and amid the chaos, a group associated with the PLO broke into a dozen banks, the largest of which was the British Bank of the Middle East. The group blasted the wall of the bank that was shared with the Catholic Church next door. With the assistance of Corsican locksmiths, they opened the vault and plundered the contents over the course of 2 days. Some of the stocks were later sold back to their owners. He decided to continue his successful trade in his new homeland, where he and an accomplice entered the Knightsbridge Safe Deposit Centre and asked to rent a Safe Deposit Box. After being led into the vault, they subdued the manager and the guards. Valerio hung a sign outside stating that the Deposit was temporarily closed to deter more customers, and then went about letting in more accomplices. The police were not alerted until an hour after the robbery, giving the team plenty of time to flee the scene. Valerio fled to Latin America whilst his accomplices were arrested, then foolishly returned to England sometime later to retrieve his beloved Ferrari, where he was subsequently caught. He was sentenced to 22 years in prison. He was killed in while on day release in Italy, as a result of a gunfight with police. Yes, more than a quarter of a billion dollars! It is unclear why the bank had such a large amount of cash on hand, but it was all in US currency. No one has been brought

to justice for this brazen crime and none of the money has been recovered. The robbery received surprisingly little media coverage. Two men dressed as police officers convinced 2 inexperienced security guards at the Gardner Museum that they were responding to a disturbance. Amazingly, the 2 men managed to do this despite having no visible weapons whatsoever. The men appear to possibly be amateurs, as they made no effort to avoid damaging the paintings and left even more valuable works behind. Also, authorities have announced that they will not prosecute anyone who has the paintings and offers to return them. More on the details of this interesting robbery can be read here. Goddard was delivering Bank of England Treasury bills from banks and building societies. Due to the nature of bearer bonds, whoever is carrying them is deemed the owner. They are as good as cash. Keith Cheeseman was arrested in connection to the crime and received a 6 and a half year sentence. Police believe that the mugging was carried out by Patrick Thomas, but he was found dead of a gunshot wound to the head before he could be charged. All but 2 of the bonds were recovered after police and the FBI infiltrated the gang responsible. Others use brute force. But the largest in history was as simple as it was effective. The day before Coalition forces began bombing Iraq, he sent his son Qusay to make a withdrawal on his behalf with a handwritten note.
