It is called sudoku and is the ultimate mind challenger. The game is very simple on the surface but boy it can get complicated in a hurry. This game occupies way too much of my time. From the information I have been able to gather it appears the sudoku game has its origins in the 18th century by a Swiss mathematician named Leonhard Euler. There was a game called "Number Place" in puzzle books put out by Dell in the 1970s that can be traced back to Leonhard Euler. In Japanese, sudoku means, "numbers singly". As you discover the rules you will see why this is important. The Sudoku puzzle was discovered in the late 90s in Japan and was pitched to various newspapers and finally the New York Post started publishing the sudoku puzzle in 2004. The rules to solve a sudoku are very simple. The puzzle consists of a 9 by 9 grid with 3 by 3 blocks with 9 squares in each block. You have to put the numbers 1 through 9 in each block without repeating any numbers. Here are some things to remember. You must put the numbers 1 through 9 in each horizontal row. Each number can only be used once. You must put the numbers 1 through 9 in each vertical column. Each block of 9 must only have the numbers 1 through 9 and once again you cannot repeat numbers. You get somewhat of a head start because some of the numbers are filled in for you. The puzzles usually come in three versions easy, moderate, and challenging. The easier the puzzle is the more numbers you are provided with already filled in. There are lots of schools of thoughts on the best way to solve your sudoku puzzle but I like to start with the obvious. I will look for any numbers I can pin down immediately. I will always start with these freebies. The next thing I try to do is go row by row and fill in any numbers I can. I then look at the square and fill in what I see that is missing. Lastly I look at the big picture and fill in the remaining numbers. If I am lucky before I know it all the blocks are filled with the correct numbers. Even though Sudoku puzzles often seem simple a new craze is upon us. More newspapers and magazines all over the world are printing the puzzles all the time. Sudoku puzzles can help keep your mind sharp and that is one of the most important things you can do for yourself. For more information on sudoku puzzles try visiting <http://www.sudoku.com>

In the picture below, a square appears when we rearrange the pieces of the upper triangle to form the lower triangle. The pieces in both pictures are identical. Can you explain the origin of the square? You will need your knowledge of geometry to solve this problem.

The Wanderer You start walking north and you walk in a straight line for two kilometers. When you look at the map, you discover that you actually walked one kilometer north and one kilometer south. How is this possible?

The Cold Drink At a bar, there is a bucket containing ice, some of which has melted. A bartender gets an ice cube weighing 20 grams from the ice bucket and puts it into an insulated cup containing grams of water at 20 degrees Celsius. Will the ice cube melt completely? What will be the final temperature of the water in the cup? How much water will turn into ice?

The Philatelist My sister has six red stamps and three blue ones. In her collection, seven stamps are from Mexico and six stamps are from France. One stamp is purple and it is not from Mexico or France. Two of her Mexican stamps are red and one is blue. Two of her French stamps are blue and three are red. How many stamps does she have?

Equilateral Triangle Find all equilateral triangles within the main triangle where the three vertices of each triangle have the same number or letter as illustrated in the example above. There are more than five. How much is the ring worth?

The Handshake At a party, everyone shook hands with everybody else. There were 66 handshakes. How many people were at the party?

Government Subsidy The government pays farmers a specific fee for each row of four trees that they plant. An enterprising, but dishonest farmer found a way of planting five rows of four trees using only ten trees. How did he do it?

Eye Puzzle This rectangle of seemingly random colored dots contains a message. Do you know the answer?

Numerology Mathematical aptitude tests frequently have sets of numbers where you are supposed to figure out a pattern or guess the next number. Can you figure out the special significance of the following sequence?

Half of those who study literature also study mathematics. Half of the students in the mathematics class study physics. Thirty students study literature and twenty study physics. Nobody who studies literature studies physics. How many students in the mathematics class study neither physics nor literature?

The Pet Detective You have been promoted to pet detective while Ace Ventura guides some tourists on a safari. From the following clues, you must figure out who is the owner of each pet, and where the pet got lost. A rabbit and a dog are two of the lost pets. The pet lost in the garden is owned by Mary. Robert does not own a dog. The cat was not lost in the woods or in the park. The investor sold the stock. How much money did the investor gain or lose?

Boolean Enlightenment The path to enlightenment lies behind one of two doors. In front of each door stands a guard who knows which door leads to enlightenment, but one of the guards always lies and the other one always tells the truth. In your search for enlightenment, you are allowed to ask one guard only one question that can be answered "yes" or "no", but unfortunately, you do not know which guard is the liar. You will be banished to the dungeon of logical illiteracy if you fail in your quest. What question should you ask to find the path to enlightenment?

The Electrician An electrician has two two-way switches single-pole, double-throw, a light bulb, and a power source. How should he connect the terminals so that either switch can be used to turn the light on or off?

The Hematologist After many years of looking through a microscope at human blood slides, a hematologist in a hospital laboratory is very excited that he found five different types of leukocytes white blood cells in a row. The hematologist gives you the following hints so that you can identify the white cells: The lymphocyte is immediately to the right of the basophil. The neutrophil is immediately to the left of the monocyte. The eosinophil is not adjacent to the monocyte, the neutrophil, or the basophil. Can you name the white cells from left to right?

Poisons Hydrochloric acid is a corrosive, fuming, poisonous, highly acidic solution of hydrogen chloride HCl. Sodium hydroxide is a caustic, strongly alkaline compound NaOH used in drain cleaners. If ingested, hydrochloric acid corrodes the mucous membranes, esophagus, and stomach causing dysphagia, nausea, circulatory failure and death. Sodium hydroxide, if ingested, will cause vomiting, prostration, and collapse. Why is it that if you mix these two substances in the right proportions

before ingesting them you will not have any poisoning symptoms? Only four members visited the club on the day that the painting was stolen. This is what they told the police: None of us took the painting. The painting was here when I left. The painting was already gone. I was the third to arrive. The painting was here when I arrived. Whoever stole the painting arrived before me. Who of these four liars stole the painting? The Botanist At a farm, you are asked to identify these common plants from their blooms: The Odd Ball There are twelve identical-looking balls, but one is either heavier or lighter than the other eleven. How can you determine which is the odd ball and find out whether this ball is heavier or lighter than the others using only three weighings with a balance? The Baker A baker has flour, butter, sugar and water. How can he make flaky puff pastry? How can he make crumbly shortbread? How can he make noodles? How can he make a loaf of bread? The vendor only managed to sell 50 pounds of berries the first day and he sold the remainder on the second day. How much profit did the vendor make? Three Generations The grandson is about as many days old as the son is in weeks. The grandson is approximately as many months old as the father is in years. The ages of the grandson, the son, and the father add up to years. What are their ages in years? The Leaning Tower Built from to Started leaning in It is said that Galileo dropped balls of various weights from the top of the Leaning Tower of Pisa to refute an Aristotelian belief that heavier objects fall faster than lighter objects. If the balls were dropped from a height of 54 meters, how long did it take for the balls to hit the ground? How fast were the balls going when they hit the ground? Aquarius You have to measure exactly 4 liters of water, but you only have a 3-liter bottle and a 5-liter bottle. How do you do it? Ship in a Tub A toy ship is floating in a cylindrical container 10 centimeters in diameter that is partially filled with water. How much will the level of the water rise if a silver teddy bear weighing grams is loaded on the ship? By the way, silver has a density of If the teddy bear falls off the ship and sinks to the bottom of the container while the ship continues to float, how much will the level of the water rise compared to the original level with just the ship? Canola oil and olive oil mixture While shopping for groceries, you notice a new cooking oil product consisting of a blend of canola oil and olive oil. The label does not say in what proportions the oils are mixed, but the Nutrition Facts panel says that a 14 gram serving has 1 gram of saturated fat, 9 grams of monounsaturated fat, and 4 grams of polyunsaturated fat. What percentage of olive oil does the blend contain?
