The following Vocabulary Builder introduces you to terms used in this chapter that have not been covered in the previous chapter: That portion of the body that lies between the thorax and the pelvis. Pertaining to the abdomen. Pertaining to the anus. A reduction in the number of circulating erythrocytes or in the quantity of hemoglobin. A state characterized by loss of feeling or sensation. This depression of nerve function is usually the result of pharmacologic action and is induced to allow performance of surgery or other painful procedures. A chemical substance produced by a microorganism which has the capacity, in dilute solutions, to inhibit the growth of or to kill other microorganisms. Antibiotics that are sufficiently nontoxic to the host are used as chemotherapeutic agents in the treatment of infectious diseases of Guidelines 27 man, animals and plants. An immunoglobulin molecule that has a specific amino acid sequence by virtue of which it interacts only with the antigen that induced its synthesis in cells of the lymphoid series especially plasma cells , or with antigen closely related to it. Antibodies are classified according to their mode of action as agglutinins, bacteriolysins, haemolysins, opsonins, precipitins, etc. Destroying viruses or suppressing their replication. The distal or terminal orifice of the alimentary canal. Showing or causing no symptoms. Postmortem examination of the body. A semi-synthetic macrolide antibiotic structurally related to erythromycin. It has been used in the treatment of Mycobacterium avium intracellulare infections, toxoplasmosis, and cryptosporidiosis. The presence of viable bacteria circulating in the blood. Fever, chills, tachycardia, and tachypnea are common acute manifestations of bacteremia. The majority of cases are seen in already hospitalized patients, most of whom have underlying diseases or procedures which render their bloodstreams susceptible to invasion. Unicellular prokaryotic microorganisms which generally possess rigid cell walls, multiply by cell division, and exhibit three principal forms: The larger air passages of the lungs arising from the terminal bifurcation of the trachea. Pertaining to the brain and spinal cord. Pertaining to the neck, or to the neck of any organ or structure. A genus of the family chlamydiaceae whose species cause a variety of diseases in vertebrates including humans, mice, and swine. Chlamydia species are gram-negative and produce glycogen. The type species is chlamydia trachomatis. Persisting over a long period of time. Liver disease characterized pathologically by loss of the normal microscopic lobular architecture, with fibrosis and nodular regeneration. The term is sometimes used to refer to chronic interstitial inflammation of any organ. A sheath that is worn over the penis during sexual behavior in order to prevent pregnancy or spread of sexually transmitted disease. Disturbed orientation in regard to time, place, or person, sometimes accompanied by disordered consciousness. Inflammation of the conjunctiva, generally consisting of conjunctival hyperaemia associated with a discharge. Parasitic intestinal infection with severe diarrhea caused by a protozoan, cryptosporidium. It occurs in both animals and humans. A genus of the family herpesviridae, subfamily betaherpesvirinae, infecting the salivary glands, liver, spleen, lungs, eyes, and other organs, in which they produce characteristically enlarged cells with intranuclear inclusions. The condition that results from excessive loss of body water. Called also anhydration, deaquation and hypohydration. An acquired organic mental disorder with loss of intellectual abilities of sufficient severity to interfere with social or occupational functioning. The dysfunction is multifaceted and involves memory, behavior, personality, judgment, attention, spatial relations, language, abstract thought, and other executive functions. The intellectual decline is usually progressive, and initially spares the level of consciousness. Passage of excessively liquid or excessively frequent stools. The loss of proper bearings, or a state of mental confusion as to time, place, or identity. A synthetic tetracycline derivative with a range of antimicrobial activity and mode of action similar to that of tetracycline, but more effective against many species. Animal studies suggest that it may cause less tooth staining than other tetracyclines. Inflammation of the brain. Visual inspection of any cavity of the body by means of an endoscope. A bacteriostatic antibiotic substance produced by Streptomyces erythreus. Erythromycin A is considered its major active component. In sensitive organisms, it inhibits protein synthesis by binding to 50S

ribosomal subunits. This binding process inhibits peptidyl transferase activity and interferes with translocation of amino acids during translation and assembly of proteins. Inflammation, acute or chronic, of the esophagus caused by bacteria, chemicals, or trauma. Male parents, human or animal. Acute infectious disease characterized by primary invasion of the urogenital tract. The etiologic agent, neisseria gonorrhoeae, was isolated Guidelines 29 by Neisser in Substernal pain or burning sensation, usually associated with regurgitation of gastric juice into the esophagus. Inflammation of the liver. Any inflammatory skin disease caused by a herpesvirus and characterized by the formation of clusters of small vesicles. When used alone, the term may refer to herpes simplex or to herpes zoster. The induction of immunity. An agent capable of suppressing immune responses. A pathological process characterized by injury or destruction of tissues caused by a variety of cytologic and chemical reactions. It is usually manifested by typical signs of pain, heat, redness, swelling, and loss of function. Inflammation of the larynx, a condition attended with dryness and soreness of the throat, hoarseness, cough and dysphagia. A more or less well-defined portion of any organ, especially of the brain, lungs, and glands. Lobes are demarcated by fissures, sulci, connective tissue, and by their shape. Any neoplastic disorder of the lymphoid tissue, the term lymphoma often is used alone to denote malignant lymphoma. A thin layer of tissue which covers a surface, lines a cavity or divides a space or organ. Inflammation of the meninges. When it affects the dura mater, the disease is termed pachymeningitis; when the arachnoid and pia mater are involved, it is called leptomeningitis, or meningitis proper. Pertaining to the mind; psychic. The study of microorganisms such as fungi, bacteria, algae, archaea, and viruses. The free slime of the mucous membranes, composed of secretion of the glands, along with various inorganic salts, desquamated cells, and leucocytes. An organism of the genus Mycobacterium. An unpleasant sensation, vaguely referred to the epigastrium and abdomen, and often culminating in vomiting. Pertaining to the first four weeks after birth. Pertaining to, resembling, or caused by nephrosis. Pertaining to or originating in the hospital, said of an infection not present or incubating prior to admittance to the hospital, but generally occurring 72 hours after admittance; the term is usually used to refer to patient disease, but hospital personnel may also acquire nosocomial infection. An orally administered broad-spectrum quinolone antibacterial drug active against most gram-negative and gram-positive bacteria. Pertaining to the mouth, taken through or applied in the mouth, as an oral medication or an oral thermometer. Inflammation of the ear, which may be marked by pain, fever, abnormalities of hearing, hearing loss, tinnitus, and vertigo. Not through the alimentary canal but rather by injection through some other route, as subcutaneous, intramuscular, intraorbital, intracapsular, intraspinal, intrasternal, intravenous, etc. Pertaining to the pelvis. The male organ of copulation and of urinary excretion, comprising a root, body, and extremity, or glans penis. The root is attached to the descending portions of the pubic bone by the crura, the latter being the extremities of the corpora cavernosa, and beneath them the corpus spongiosum, through which the urethra passes. The glans is covered with mucous membrane and ensheathed by the prepuce, or foreskin. The penis is homologous with the clitoris in the female. Any extrachromosomal hereditary determinant. Plasmids are self-replicating circular molecules of DNA that are found in a variety of bacterial, archaeal, fungal, algal, and plant species. Inflammation of the lungs with consolidation. Before a disease becomes clinically recognizable. A gland in males that surrounds the neck of the bladder and the urethra. It secretes a substance that liquifies coagulated semen. It is situated in the pelvic cavity behind the lower part of the pubic symphysis, above the deep layer of the triangular ligament, and rests upon the rectum. Pertaining to or within the purview of psychiatry. Pertaining to the lungs. A specialty concerned with the use of x-ray and other forms of radiant energy in the diagnosis and treatment of disease. A backward or return flow. A backward flowing, as the casting up of undigested food, or the backward flowing of blood into the heart, or between the chambers of Guidelines 31 the heart when a valve is incompetent.
