Her other research interests focus on child and family welfare. Reviews "This is the most thorough and comprehensive text on human behavior that I have see. It brings together the preeminent sociological, physical, and anthological theories on human behavior and the social environment. It covers every possible scenario related to the practice of social work one could imagine. The case studies reflected the diversity of the range of consumers of social work services and were utilized well as instruments for understanding and applying concepts. I will continue to use the texts in my course. I like the way in which it exposes students to various theories. The dimensions for assessing human development and behavior are clear. Because I use both texts together, I feel that students gained an understanding on human development that is grounded in an environmental context. The chapters dealing with the lifespan mainly young adult and beyond and the opening chapters of both books are also great strengths. There are good illustrations that bring the concepts to life throughout. It is well organized. I teach in an urban context where students tend to practice with the poor. I like the questions that encourage critical thinking. The strengths of both volumes include the use of case studies, vignettes and side-bars to help students understand material contained in the chapter; the use of tables, figures and illustration; and the horizontal and vertical integration of materials connecting themes and models used in textbooks. It is also presented in a way that our students could make good use of it. It is well written, informative, comprehensive, and interesting. The greatest strengths are the uniformity in writing style, cohesion among chapters, strong case examples, integration of learning within chapters, and an amazing ability to be comprehensive without the reader getting lost in the details.
