Royal Observatory, Greenwich One of the hyper-accurate timekeepers at the observatory British astronomers have long used the Royal Observatory as a basis for measurement. Four separate meridians have passed through the buildings, defined by successive instruments. Since the first triangulation of Great Britain in the period "1791", Ordnance Survey maps have been based on an earlier version of the Greenwich meridian, defined by the transit instrument of James Bradley. When the Airy circle 5. When Greenwich was an active observatory, geographical coordinates were referred to a local oblate spheroid called a datum known as a geoid, whose surface closely matched local mean sea level. Several datums were in use around the world, all using different spheroids, because mean sea level undulates by as much as metres worldwide. The shift from several local spheroids to one worldwide spheroid caused all geographical coordinates to shift by many metres, sometimes as much as several hundred metres. The Prime Meridian of these modern reference systems is now calculated from observations of extra-galactic radio sources. Initially it was dropped by an operator; from it was released automatically via an electric impulse from the Shepherd Master Clock. This was possibly the first "international terrorist" incident in Britain. Bourdin died about 30 minutes later. It is not known why he chose the observatory, or whether the detonation was intended to occur elsewhere. The last time that all departments were there was Prior to this, the observatory had had to insist that the electric trams in the vicinity could not use an earth return for the traction current. On 15 October, during the Blitz, the Courtyard gates were destroyed by a direct bomb hit. The damage was repaired after the war. Although the Astronomer Royal Harold Spencer Jones moved to the castle in 1924, the scientific staff did not move until the observatory buildings were completed, in 1926. Shortly thereafter, other previously dispersed departments were reintegrated at Herstmonceux. In 1953 the RGO moved again, to Cambridge. A inch reflector can take high resolution images of the sun, moon and planets. An instrument dedicated to observing the sun. An instrument with interchangeable filters to view distant nebulae at different optical wavelengths. Observatory museum[edit] The observatory buildings at Greenwich became a museum of astronomical and navigational tools, which is part of the Royal Museums Greenwich. Many additional horological artefacts are displayed, documenting the history of precision timekeeping for navigational and astronomical purposes, including the mid-19th-century Russian-made F. Fedchenko clock the most accurate pendulum clock ever built in multiple copies. It also houses the astronomical instruments used to make meridian observations and the inch equatorial Grubb refracting telescope of 1825, the largest of its kind in the UK. The Shepherd Clock outside the observatory gate is an early example of an electric slave clock.

Wilson Company When Frank R. Stockton and his wife began housekeeping in Nutley, New Jersey, they needed a second maid. Stockton went to New York City and procured a girl of about fourteen from an orphan home. She proved to be a very peculiar character who devoted her spare time to reading blood-curdling books aloud to herself in the kitchen. Her real name was unknown and she borrowed several romantic ones from her novels, but Stockton named her Pomona. He wrote a sketch about Pomona for a magazine, imagining her in the service of a couple who kept house on a canal boat, and it attracted so much interest that he was compelled to continue the story. He was born in Philadelphia, the son of a writer on religious subjects. Some of his illustrations appeared in *Vanity Fair*. In spare moments he began to write fairy tales, for he had been a lover of dwarfs and giants and magic things since childhood. Some of his stories appeared in juvenile magazines and soon he left the engraving business for a journalistic career. The writing of fairy tales continued and his first book was *Ting-a-Ling Tales*, the title story having appeared originally in the popular but short-lived *Riverside Magazine for Young People*, edited by Horace E. Most of his fairy tales appeared in *St. He*. He took great pleasure in writing these tales and always regarded them as his best work. One of the most popular stories, "The Griffin and the Minor Canon," was written in the English town of Chester and was suggested by the famous Chester Cathedral. *Rudder Grange*, which was written for grown-ups but is enjoyed by boys and girls too, did not appear until Stockton was in middle age. It was followed by *The Casting Away of Mrs. Aleshine*, the amusing story of two prim New England ladies who are shipwrecked on a desert island with a male survivor. It presented an unsolved riddle as to whether the barbaric princess gave her lover to the tiger or to her rival, and it caused so much discussion in the club that he published it in a magazine. To his surprise, it captured the public fancy and became the subject of widespread debate which continues to this day. The author was deluged with inquiring letters, but he refused to solve the puzzle. *The Lady or the Tiger?*

4: Royal Observatory, Greenwich - Wikipedia

Most of his fairy tales appeared in St. Nicholas and were gathered into the well-known volumes Old Pipes and the Dryad, The Bee-Man of Orn, The Clocks of Rondaine, The Floating Prince, The Queen's Museum, Fanciful Tales, and others. He took great pleasure in writing these tales and always regarded them as his best work.
