

1: Fort Conger - Wikipedia

The United States has not produced a comprehensive gazetteer since and seems to ignore a recommendation by the United Nations Committee on Names Standardization that every country publish its standardized names in a national gazetteer. A key obstacle to a comprehensive national gazetteer is the sheer volume of information involved.

Zimmerman Raise your hand if you like beer! Fear not, good citizens! At Principally Uncertain, we understand the most pressing problem of the people, and we shall build a Gazetteer of Beer a Gazettebeer, if you will to help you all on that most noble of endeavors: Does this happen if beer has not been consumed first? Is the beer all part of an alien plot to pacify humanity and make us amenable to our brewing overlords? Is that just what the Beer wanted us to think? Note on the note: Apologies for the digression. I was mostly entirely sober during most all of the research. In an unrelated development, I may also have binged-watched Doctor Who during some large part of it. The Question Is there any geographic, social, or cultural pattern to high-rated breweries? The Short-Short Version Ever wondered where the good beer got to? With two weird exceptions: North Carolina, in particular, seems to buck the trend that high-quality beverages are the province of snooty urban hipster types. State that was the most pleasant surprise- North Carolina. Well done, Tar Heel State! Most disappointing state- Everybody point and laugh at North Dakota. Of the breweries that made the cutâ€¦. Each of the 5 states counting DC with fewer people all had more breweries pass the test, with , fewer Vermonters producing 43 qualifying breweries. Even the least-populous state in the Union, Wyoming, managed North Dakota, you should be ashamed. The Pacific Northwest isâ€¦. Still, a bit underwhelming given the hype around the place. Colorado lives up to the hype Wow, check out that dense line of fermented deliciousness from just south of Denver up through Fort Collins and Greeley! It also has the single area where highly-rated beer is produced in a zone of relatively modest household income, centered around Asheville, NC and extending into parts of South Carolina, Georgia, Tennessee, and Virginia. Check out all the dark orange breweries in light green low-income areas. A puzzle to be solved, indeed. They may not make too many cars around Detroit, but they still make some amazing ales in Michigan and Chicagoland. A brewery whose beers on average rate at a 3. This effect is endemic to any crowdsourced review system, particularly ones based on amateur reviewers and is likely to have a stronger effect on breweries with more localized distributions. Beers with a larger distribution range and a higher number of reviews will likely have slightly depressed ratings What am I going to do about this problem? Nothing, for two reasons. Because I pulled the number out of my butt as a reasonable cut-off point. And seems like a reasonable sample size. Am I doing anything to fix that? Where should the beer nerds move? Part 3 takes the closely-related, anxiety-provoking look at where people who like beer should absolutely not move. Here are some potential ideas for future projects: Is a particular climate correlated with good brewing? Are zip codes that lean left or right or center correlated in any way with a high Booze Index? Which appeals to you? Do you have any other proposals that come to mind? Inquiring minds want to know!

2: Sirmilik National Park - Wikipedia

The national address gazetteer brings together address information from local authorities and Ordnance Survey to create a 'national address gazetteer database', providing one definitive source of accurate publicly-owned spatial address data for the whole of the public sector.

The earliest known are predecessors of the modern-day Inuit. In British explorer Bill Tilman traversed the island, but did not climb any of the larger peaks. In 1951, a Canadian expedition of Rob Kelly and others climbed 20 peaks of Bylot Island, and in 1952 Mike Schmidt with others climbed 28 peaks, including 16 first ascents. The park was first established as a bird sanctuary in 1952 and monitored by the Canadian Wildlife Service because of its seabird colonies. Today, the area is inhabited by the Inuit who continue to hunt and fish as their ancestors did.

Geography and climate[edit] Kaparoqtaalik Glacier NASA image of the park with the three areas labelled The park consists of three separate land and marine components. These are Oliver Sound , located to the south of Pond Inlet, characterised by a long narrow fjord flanked by towering cliffs and glaciers, the plateau and river valleys of the Borden Peninsula [3] and Baillarge Bay , and finally Bylot Island , characterised by its rough terrain with mountains, coastal lowlands, icefields and glaciers. Admiralty Inlet forms a western border, with Elwin Inlet also to the west, while Navy Board Inlet forms a border to the east, separating the peninsula from Bylot Island. It is also one of the largest uninhabited islands in the world. While there are no permanent settlements on this Canadian Arctic island , Inuit from Pond Inlet and elsewhere regularly travel to Bylot Island. An Inuit seasonal hunting camp is located southwest of Cape Graham Moore. The Byam Martin Mountains extend from east to west across Bylot Island and are an extension of the Baffin Mountains which in turn form part of the Arctic Cordillera mountain system. The Byam Martin Mountains are made up of Archean -Aphebian igneous crystalline rock and Proterozoic metasedimentary and metamorphic rock , such as gneiss. Sharp peaks and ridges , divided by deep glacier-filled valleys are typical features in the range [11] and has been extensively modified by glacial erosion. Extensive glaciers dot the island including the Kaparoqtaalik Glacier. Vertical cliffs along the coastline are made up of Precambrian dolomite. In the north of Baffin Island, there is a polar maritime climate which means long, cold winters and short, cool summers. Rainfall is relatively abundant, contributing to the flora seen in the park. Fauna and flora[edit] Bowhead whale tail-slaps in a distance Fauna Beluga whales , seals , walruses , Peary caribou , Arctic foxes , Arctic hares and wolves are found in this park. Seabird colonies are also located on Bylot Island which have a large colony and nesting area of greater snow geese. A record , birds are reported to pass the park during summer months every year, and the large geese population of the island is known to constitute the most abundant herbivores of the island. In addition, several species of brown moss have been recorded. In the Arctic environment of the southern part of the island species of plants have been documented, which are considered to have rare quality and productivity.

Tracy Sayuki Tiemeier, National Catholic Reporter Lobel's Quest for God and the Good is about the travel, not the destination; it is about raising the questions, not answering them once and for all.

Moustache Swimming Hole Gazetteer: My first attempt at the Royal Gorge, a swimming hole in the front range of the San Gabriel Mountains of Southern California, ended with me squealing like a pig and scrambling like a goat over the rocks, logs and boulders of Long Canyon. I paused for a minute and watched a California Newt paddling in the muck below. Here in Southern California there is literally no buffer zone between wilderness inhabited by black bears and mountain lions – not to mention coyotes, deer and squirrels – and suburbs full of people who have no idea how to deal with these native fauna. The Gabrielino Trail runs alongside a bubbling creek: I made this first attempt in early June, so California Poppies and Tiger Lilies were still blooming along the path. After five miles seekers of the gorge diverge from the trail for two miles of boulder-hopping up Long Canyon. Not only is Pancho Doll an awkward writer, but the directions he gives are on par with those offered by a drunken local: They give you enough confidence to go out get truly tangled and lost. Eventually we found the right starting point: A fire road that wound down to Tar Creek through dense scrub buzzing with bees from the apiary at the trailhead. The creekbed at the bottom of the canyon was dry, but a mile downstream we came across a true Shangri-la of deep sandstone bowls, brimming with cool mountain water. Though I split up with that girlfriend a year or so after that dreamy day of cliffside cannonballs and floating around under a clear blue sky, swimming holes still connote renewal and celebration – particularly here in the Southwest where they require hiking down dry creekbeds under the burning sun. Each leap over stagnant pools and between dry boulders is a step made on the basis of hope against common sense that the path will lead to a riparian paradise. So it was with a sense of impending depression and defeat that I re-buckled my backpack and headed back down the trail alone, having failed to reach the Royal Gorge. As I trudged slowly down Long Canyon I nearly stuck my hand on top of a rattlesnake, and stopped to take her picture instead. It was not five minutes later that I stuck my boot into a crevice and set one of her siblings off, the distinctive rattle and hiss being the cause of my shrieking and leaping through the fading twilight. The adrenaline carried me the six miles back to my car. I returned to make another attempt at reaching the Royal Gorge a month later. To be continued in part two – Advertisements.

We are all looking forward to the cooler weather. One of the areas that I have not explored much is the Kings River. I have been to the falls four or five times, but only floated the Kings River once. As with other rivers that begin on the north-facing slopes of the Boston Mountains, the Kings River flows north. Fall webworms feast on tree September 20th was a beautiful morning with clouds as we set off on our search for the Kings River. We had been unable to find any good maps with current road numbers on them so now we were on our own Boy were we in trouble! The map showed two access points, Romp Hole and Stoney Point and we had decided to start with them. They were both somewhere to the east of the road we were on and in the general vicinity. The scenery was beautiful as we followed a couple signs till we got on some dirt roads.. You want to make sure and respect their rights and leave no litter on the banks. We noticed that the access point was marked by an Arkansas Game and Fish sign with an arrow pointing to the access. The Romp Hole was a narrow but nice place to put in a canoe. The river was calm and beautiful. We wandered around a bit I am sure Dunbar and Hunter also wandered around a bit before they found their way and then was fortunate to find the Stoney Point access. The Stoney Point access is quite large and can accommodate quite a few canoes at once. Not sure about vehicle parking though. This is a very nice spot and we spent some time here. We sat down, had a snack and a drink and just enjoyed the beautiful surroundings. The Kings River is a beautiful river and very floatable. The access points are a bit difficult to find but you can use an outfitter. Kings River Outfitters is the one we used some years ago, and they provided everything we needed. Make sure, however that you are prepared. There will be plenty of spots with no cell phone coverage. A spare tire, jack, fix-a-flat, 12v air compressor and a plug kit, plus a full tank of gas are some of what we consider necessities when heading down the dirt roads. A GPS will also be very handy. If you get lost, just stop and ask someone how to get back to the pavement.

The Myth of National Defense: Essays on the Theory and Contents Preface vii 1 The Historicity and Historicisation of Arthur 1 2 A Bibliographic Guide to the Welsh Arthurian Literature 47 3 A Gazetteer of Arthurian.

Share via Email Management of electronic data on land and property, once of interest only to county surveyors and geographical information specialists, is becoming a hot commercial and political topic. Two things are pushing the interest: Both depend on accurate information about land being electronically available. One way to achieve this would be through a national land data set. At the moment, several different organisations are jostling in this space. They include the Land Registry, which maintains the register of title; the local government Improvement and Development Agency IDeA, which operates central land information services and gazetteers for local authorities; and Ordnance Survey, which maintains mapping data. NLIS is an ambitious national infrastructure project that aims to create an e-conveyancing system linking local government to solicitors and the Land Registry. All local authorities are connected to the system. About one fifth can only receive search requests from NLIS, while most of the rest are at "level two", meaning that they can receive and return a search electronically. Another fifth have achieved "level three" integration, which means they can receive, conduct and return a search electronically. This is a national address list that provides unique identification of properties. It allows organisations across the public and private sectors to link data to the same high-quality source of references that defines locations and addresses. It relies on data from local land and property gazetteers LLPGs run by local authorities; over two thirds of councils have completed them. All local authorities have to conform to the national gazetteer by This records details of all land registered in England and Wales. The target is for all land to be recorded by The register describes the property, who owns it and any mortgages or charges applying. A title plan shows the location and extent of the property. All these details are available electronically and the Land Registry is also developing a full e-conveyancing service see box opposite. When the Land Register is complete, it will create a land and property database of the country. This will overlap with the national gazetteer. One issue needing resolution is who will hold the list of addresses. Address data is one of the four basic building blocks of e-government. But previous attempts have foundered. The most recent, the Acacia project, involved IDeA, Land Registry, Ordnance Survey and Royal Mail among others, but ran out of steam last year because of arguments over who would own address data. Another complication is the future of the Local Government Information House, operator of the national land information system and national gazetteer. Last year, a review of the IDeA for the Local Government Association recommended it should "consider the future of national infrastructure projects such as NLIS, with a view to moving them out of the agency". The report questioned whether the agency should be involved in running national infrastructure projects once they moved past the "incubator" stage and become purely commercial ventures. Thornton says the IdeA is conducting its own internal review on these recommendations. Despite concluding that there were "no grounds for action" at present, the office has said it will study the market further in due course. Thornton says that NLIS has the edge as an e-conveyancing channel due both to its back-end link up to local authorities and its buy-in to date from councils and solicitors at both ends of the conveyancing process.
