

THE RATIONALE FOR AND SIGNIFICANCE OF THE STUDY WOULD BE IN UNCOVERING pdf

1: RESEARCH METHODS: WRITING: INTRODUCTION

Rationale for the study needs to be specific and ideally, it should relate to the following points: 1. The research needs to contribute to the elimination of a gap in the literature.

Get a complete paper today. The background of a research paper includes an appraisal of the area under research, evaluating currently available information pertaining to the issue, preceding studies pertaining to the issue, and pertinent history about it. This background serves the purpose of helping you to demonstrate the significance of your research question and thus further build on your thesis. Steps in writing the Background of Study First step: Undertake some preliminary research when coming up with a thesis. Many issues may seem unclear and thus a need to solidified such thoughts. It entails writing a research question that will guide your study, other refer to it as a thesis statement. This entails pondering over what you have read in the chosen sources and develop issues that you will investigate through your study to determine whether such claims are tenable or not. Guided by your research question and the thesis statement you developed, write your background diligently paying attention to important issues you have harnessed from the identified sources. This step entails creating appropriate sections in your background arranged in a logical manner such that every idea stands out. This entails concluding by recognizing any supplementary study that any other person interested in the field of study may undertake a research. This is the final step and entails revising and editing your background. Do numerous drafts of the background, revise them and fill in any other relevant information as you revise. The finale draft must be void of any errors and contradictions. Additionally, every issue that builds on the thesis statement and the research question must be easily recognizable from the background. There are several justifications that supports studying comparative education and more so among students undertaking education as a specialization for instance teachers, policy makers, planners in education and managers. To enable students to better understand the education systems wholly through retracing its development and the influence other subjects have influenced it over time to this day. To make educational concepts universal: This is simply the generalizing of statements about how educational concepts develop and testing applicable the existing theories are universally. To know and understand other people: Comparative education helps in developing a pool of knowledge that caters for intellectual curiosity that one may have and also enhances your intellectual enlightenment. Studying systems that pertain to other people helps in developing a sufficient perspective toward our education systems. By Helps in acquiring practicality in life: This transition may take the form of an inference, in which the substance containing the perception may occur in form of a premise. It may also be in form of a conclusion. Difference between Rationale and Significance of Study The difference between rationale and significance is that rationale asks the question: Based on what is already known and published in the literature of your subject, does your planned experimental approach has a logical reasoning? On the other hand, significance asks the question: Difference between Rationale and Purpose of Study The difference between rationale and purpose of study is that; rationale involves stating the reasons for which one is undertaking a study or asking a specific question of what the study is all about whereas the purpose of study provides readers with what they can expect to know or come away with after reading the study Neuman, How to write a research proposal and conduct productive research. How do students conduct academic research?. The original model papers from our writers may be used in the following ways: As a source of additional understanding of the subject, references direct citing and paraphrasing depending on if your institution accepts paraphrasing and how it defines plagiarism.

2: WHO | Rationale and aims of the study

Rationale of study/research is the justification of that study. According to Drummer & Bassed () "The rationale often explains which specific groups of people can benefit from the research and it typically indicates how the specific project

THE RATIONALE FOR AND SIGNIFICANCE OF THE STUDY WOULD BE IN UNCOVERING pdf

fits within the developing body of knowledge."

3: Rationale | Definition of Rationale by Merriam-Webster
