

1: Rupture - Äœberwinde deine Ä„ngste () - IMDb

what are 6 possible future of marvel cinematic universe after as the avengers infinity war is coming near, fan's level of curiosities are reaching new heights about the future of marvel cinematic universe after

Edit Despite avoiding any seeded robots in the first round, Infinity still found itself in the middle of an unlucky draw, as it would be facing the frightening newcomer, , alongside Infernal Contraption , another robot to represent a university in Robot Wars, and former Heat Finalist Aggrobot 3. Infinity is thrown over by Infernal Contraption. To begin with, it ran over the top of Aggrobot 3 before charging Infernal Contraption from the side, but sure enough, one blow from ruptured the pincers of Infinity. Infinity had not sustained any major bodily damage before it spun away from and pressed the pit release. In spite of its action, Infinity then reversed into the descending pit, eliminating it from the competition. Infinity was later followed in the pit by Infernal Contraption, but not before it had taken considerably more damage than Infinity did.

Extreme 2 Philippa Forrester: In Round 1, it faced two experienced robots in the form of Tiberius 3 and Fluffy. Infinity was quick off the mark and rammed Tiberius 3, but bounced off its rounded shape. Tiberius 3 caught Fluffy and crushed into it, whilst Infinity repeatedly drove into Tiberius 3. Growler then activated the pit, with all three robots very close to it. Infinity was left over the edge of the pit, but Tiberius 3 in attempting to drop Fluffy down it managed to free the Welsh robot and dropped Fluffy into the pit, with Tiberius 3 also falling with it. Infinity then pushed Infernal Contraption into Sgt. Infinity continued to shove Infernal Contraption around, but then Infernal Contraption finally hit Infinity with its spinning drum and buckled the pincers of Infinity. Sir Killalot then spun around with Infinity and released it. Infinity went straight back on the attack and rammed Infernal Contraption into the wall again. Infernal Contraption then slowed down a lot and just escaped Sir Killalot. Both robots were looking worn out and the battle went to the judges, who decided that Infinity was the winner. Infinity then faced Tiberius 3 again in the final. Both robots then chased each other around the arena, until Tiberius 3 gripped Infinity. Eventually the match went to the judges, who decided that Tiberius 3 was the University Challenge Champion.

2: How Wyoming Is Connected To Hawaii's Volcano Eruptions | Infinity +1 News

But if you are a discerning Infinity Gauntlet analyst, you have to ask yourself: Did any of that actually happen? Once Thanos has the completed Gauntlet, he theoretically could do anything, create anything, cause any illusion or any iteration of reality he wanted.

Ever since the first Avengers film ended with Thanos grinning at the screen, fans have suspected the end game could be the Mad Titan acquiring said stones and wreaking havoc on the universe. And then they went and announced Infinity War. If that sounds like something you grumbled in between sweet, delicious sips of a nine dollar root beer, then this article is just one of many written this year to offer you an answer! The Rebirth of Thanos which chronicles his latest journey for power. Thanos had already tried this galactic genocide thing before, and was stomped by the Avengers and Adam Warlock. However, Death capital D, the manifestation of the concept of death took a liking to Thanos and revived him to be a sort of foot soldier. And with all these things living longer thanks to medicine and artificial extension, it takes too long for the sweet embrace of death to balance things out. Until, that is, he realizes the true nature of the soul gems, soon to be renamed the Infinity Gems once Thanos understands their true nature. Thanos realizes the gems are far more powerful than anyone realized – including himself the last time he tried this scheme. Armed with this knowledge, he assures Death he will perform her task – he just needs to obtain these six gems that will assist him. Thanos outwits her and takes the Soul Gem, delivering the above soliloquy in the process. You gotta lead up to that biz. Thanos quickly outsmarts this goon and now has the key factor in his plan. For as you can read below, Power is what makes the Gauntlet, the Gauntlet. Individually the gems are quite formidable. But with the limitless energy of the Power gem, their abilities are amplified on a galactic, likely universal scale. If the Mind gem allows its user to dominate the will of those around him, then the combo of Power and Mind means a much wider, much deeper level of influence. Basically, with Power backing the other five, actual omnipotence is within reach. But, the GotG prevailed and now the Corp are presumably protecting said stone. Power is a red, a color of passion and heat and intention. In the MCU, Power is purple. And now Reality is red. And all the others shift around, with possibly Soul retaining its signature green color which goes back beyond Surely there are other, more pressing alterations to consider? The gardener dude up there had been using the Time Gem to keep his world famous galaxy famous? Frankly I think just these three gems alone are outrageously overpowered, but hey why stop here? He was already pretty fast, but an interesting gem lets him be like, really really fast. So fast in fact Thanos realizes what the gem actually does – contort the fabric of space to allow instant travel, instant existence across distances and other location-based feats. But again, with Power and even Time backing the Space gem, re-writing the makeup of the universe is not out of the question. Or making it such that his view of the universe is already years old and has always been the case. However, we kinda knew that when Loki and the Chitauri used it to open a giant portal over New York! The image even contains the other gem images within it, suggesting Reality is above them all – if the user can comprehend it! The Aether in Thor 2 turned out to be an Infinity Stone the first time the words are spoken, even! However, it kinda makes sense since the villain was reaching out to other realms and not just space within our own universe. One holodeck episode later, Thanos wins. This is how Loki was able to control so many people incl Hawkeye in the first Avengers. Then Galactus and his equals. He basically succeeds at everything, including knocking Earth out of its orbit which in turn sinks Japan, floods most of the US coasts and sends the planet drifting off into deep space.

3: Achilles Tendon Rupture Treatment & Surgery | Dallas TX

Explore the largest community of artists, bands, podcasters and creators of music & audio.

What Is the Growth Achilles Tendon? The Achilles tendon runs down the back of the lower leg and connects the calf muscle to the heel bone. Besides being the longest tendon in the body, the Achilles tendon rupture is notable for other reasons: It is the site of one of the most common injuries to the foot and ankle. The tendon may be ruptured, or torn. This can happen suddenly, with a jump or a burst of speed. Or the tendon can degenerate over time and eventually rupture. Symptoms of Ruptured Achilles Tendon Symptoms of a ruptured Achilles include pain, stiffness, and general tenderness in the tendon area. This can be felt anywhere between the heel and the calf muscle. Pain may be felt in the morning on arising and ease gradually throughout the day. Or it can be worsened by activity. A ruptured tendon may become swollen and sensitive to touch. The patient with a ruptured Achilles may report any of the following: Sudden pain in the back of the ankle or calf Popping or snapping Swelling between the heel and the calf Difficulty standing on the toes Until the patient is able to see the doctor, he or she should stay off the injured foot or ankle. Walking may cause further damage. Ice can be applied to reduce swelling, and the ankle can be wrapped. Keeping the leg elevated, at the same level or slightly above the level of the heart, will help reduce swelling. Diagnosing a Torn Achilles Tendon When a patient appears at our clinic in DeSoto, Dallas or Sunnyvale, with a ruptured Achilles tendon, our staff member will ask them to describe how the injury happened. The doctor will also ask whether the patient had a previous injury or has experienced the same symptoms in the past. If the tendon is ruptured, the patient will show some weakness when trying to push down or stand on their toes. An Achilles tendon rupture is usually a fairly straightforward diagnosis but the doctor may order imaging tests to confirm the diagnosis or to better analyze the extent of the damage. Conservative Treatment Non-surgical treatment is preferred for minor Achilles tendon ruptures, for patients who are not overly active, and for those with medical conditions that might complicate surgery. Non-surgical treatment might include prescribing a cast, boot, or brace to immobilize the tendon while it heals. If you have ruptured Achilles tendon; After surgery, the foot and ankle will be immobilized in a cast or walking boot. Complications such as re-rupture of the tendon, or nerve pain are rare but not unknown. Physical therapy is an important component of the rehab process.

This particular Redditor is asserting that the Time Stone given to Thanos is actually one plucked from the future, thereby explaining why the Infinity Gauntlet ruptured - it was using a Time.

This operation is hereby transferred to Yggdrasil Central Control. Imperial Calander Year , The seventh day of the month of Ashra, hour This unit has been offline for approximately , standard years. The Revelation Protocols are now in effect, The Yggdrasil Program has been successfully loaded to all administrative terminals. Broken Throne has been approved. Main utilities mainframe active. Power and life support will be restored to the following facilities: Initiate data link to central Lazarus circuits. Sample 02 is to be transported to the Cradle for immediate activation. Void Current Temporal Coordinates: Ashra 7, Hour Data Corrupted, File lost. Pattern rejected, sample unsuitable. Data Corruption Minimal, File successfully recovered. Astarte was a small, unassuming world that was blessed with abnormally high concentration of fertile farmland, and not much in the way of anything else. It had been settled several centuries ago by Midchildan colonists, and today was the single largest producer of foodstuffs in bureau-controlled dimensional space. This resulted in a civilization composed almost entirely of farmers who, nonetheless, knew enough about the universe to tell their children stories about the brave bureau mages of who sailed between worlds in gigantic ships bristling with magical weaponry, fighting evil and sealing away world-destroying artifacts of terror. Every child dreamed of the day they might be tested for magical potential, and, if they were lucky, be taken away from a life of livestock and crops to the academy, to one day become one of those shining golden heroes. Tarra had been one of the children lucky enough to have sufficient magical power to warrant training, and one of the children lucky enough to be taken to that glowing golden palace in the stars known as the TSAB Ground Forces academy. He was also one of the children unlucky enough to discover it kind of sucked there. Despite what his mother might have said to the contrary, Jacobus Tarra was not a particularly likable young man, nor one blessed with a great deal of self-control. His childhood on Astarte had been notable primarily for the amount of bullying it included, mostly directed from him towards other, smaller people. To a young man raised on being answerable to basically nobody, the strict academy life had chafed. While he quite enjoyed the combat training particularly sparring with other, more squish-able cadets , pretty much everything else about the academy grated on him. And as it grated on him, he began to act out and quickly discovered that the proctors were considerably less forgiving of his stupidity than what had passed for authority figures on Astarte. For instance, were you aware that the standard punishment for a drunk and disorderly charge for a TSAB cadet was one week in the brig? Or that the punishment for escaping from the brig before your sentence was up was expulsion from the academy? Or that the punishment for throwing a punch at the officer announcing your expulsion was that the officer in question would beat you within an inch of your life and unceremoniously dump you in the infirmary, to be escorted off-site by security as soon as you could walk under your own power? Because Jacobus Tarra was completely aware of all these facts; in fact, he now had first-hand knowledge of them. But he was not a quitter, no sir. And although he was no longer welcome in the TSAB, there was still a world of infinite possibilities for an enterprising young man with some skill in combat magic, a healthy distaste for authority, and very few morals. But Tarra found a good one. The territory maintained by the TSAB was vast, and included many worlds filled with dead civilizations just waiting to be ransacked, and many more worlds too small and undeveloped to defend themselves. And so it was that Jacobus Tarra threw away the last vestige of respectability he had and took the long-coming step of just becoming an outright criminal. He even began calling himself Jacobus the Terrible, just because he could. He and his boys raided small worlds, undeveloped worlds, looted ruins, and made damn fine money for themselves in the process. Nobody told him what to do, he took whatever he wanted, and he was even starting to become known amongst the outlaw community. There was even talk of him getting a bounty on his head! Yes, life had been good. He and his crew had ransacked the ruins of a small city on a world orbiting a star so old it had virtually burned itself out, in a dimension all but devoid of life in general. The librarian had sighed, said something about making a call to his friends, and closed the link. No farms here, dammit! Now, you

should probably just stay here and wait quietly. A ship will be arriving in about twenty minutes to take you to prison and deliver the Lost Logia into storage. Fate and Arf are outside dealing with your border defenses. And I guess the Wolkenritter are still on probation until Hayate finishes basic training. I guess it was sort of silly to think you were asking where my friends were. And I was really careful to make sure none of your friends were hurt! And the worst part was that she honestly did sound a little sorry. Jacobus Tarra was a large man, nearly seven-feet tall and built like a truck. To be looked down on like thisâ€¦ pitiedâ€¦ by a little girlâ€¦ The large pirate let out a guttural yell, his blade bursting into red light as he charged. The little girl in the frilly white dress sighed and raised one hand. Three seconds later, as Tarra lost consciousness, he vaguely heard Nanoha Takamachi say, "I did ask you nicely to come quietly. In their defense, there was really nothing the crew of the TSAB gunship Vishnu could have done differently. After arriving at Unsettled World, at the request of Chief Librarian Scrya, they had taken into custody 27 suspects and five contraband Lost Logia of unknown purpose. They had also winced when they saw what, exactly, the two little girls and the magic dog had done to the suspects in question, although that was not, strictly speaking, a part of official mission parameters. Still, it was both kind of awesome and completely frightening, and they could be forgiven for reacting to it. After taking the devices and suspects into custody for transfer to a secure facility, and asking the field operatives if they would require transport to which they answered no, that they had teleported in directly from their homeworld and would have to leave the same way if they hoped to get back to school before lunch ended. But thank you very much for offering! A fully self-sufficient artificial station intentionally stationed as far dimensionally speaking, which meant the distance was really sort of metaphorical, but it still counted for something as possible from any and all life-supporting worlds, the Facility was where all Lost Logia or other technology that had not yet been categorized were stored until Research and Development could get their hands on them. Basically, it was where the stuff that might explode and rip open the universe if you poked it wrong was kept. As they were transporting dangerous contraband and enemy combatants, the Vishnu was running in full combat mode; magical barriers charged, weapons hot. Dimensional space was always dangerous, of course, but the biggest dangers were to lone travelers or those without proper protection. The Vishnu was neither. So, the fact that billions of lives were about to be put in extreme danger was not really their fault. It started with a hole. The maelstrom of blues, reds, and purples in the space between dimensions cracked slightly, a spot of pure blackness beginning to grow amongst the swirling colors. It did not get very big, really; no larger than a meter or two across and less than half that from top to bottom. It was, after all, only there for a single spell to pass through. The spell in question was a very subtle enchantment, designed only to create a link between two computer systems. It was among the most common enchantments found in any magical world, allowing, essentially, the creation of an internet that stretched between entire dimensions. In this case, it was only being used for the far simpler task of creating a link between the central computer of the Vishnu and the significantly more advanced system in the building on the other side of the small gate. Staring through the gate at the Vishnu, the dead woman asked, "Do you have it, Yggdrasil? She was a small woman, and the grey cloak she was wearing was obviously too large for her, but it was the mark of her office and she would wear it with pride, dammit all. Resizing be damned, she refused to be made a fool of by her own blasted clothes. We know all too little about the people who had the gall to build their little kingdom on top of our graves. The intelligence our guest has provided is not nearly enough for my tastes. Their security is insufficient to either detect or repel my advances. Have you confirmed the presence of the target on board? Vessel cargo manifest lists five gems of unknown origin. Accessing command subroutinesâ€¦" On board the Vishnu, the first officer turned to the Captain to report that there had been a slight error in one of the automated status reports from the engine room, and that they should probably run a diagnostic on the central computer. Deciding that this would be sufficient distraction, Yggdrasil promptly left the subverted environmental programs to cheerfully carry out their new instructions and began to implement the next stage of the operation. Several security programs, activated by this far more overt action, attempted to hinder its progress, but they were neither advanced enough technologically nor powerful enough magically to hold off a sentient computer capable of handling the information processing of an entire magical world. This section of the ship was, conveniently, designed to jettison in the event that the cargo was discovered to be hazardous,

allowing the rest of the vessel to be preserved. Yggdrasil informed the hold computers that, yes, the cargo was highly dangerous and that the hold should be ejected immediately. With the Drive Units safely away from the ship, Yggdrasil determined that nearly two minutes of ship-wide explosive decompression had probably distracted the crew enough. Informing the environmental command routines that they had done a very good job indeed, it ordered them to begin restoring the atmospheric integrity as much as possible. The suffocating crew, who had been fighting desperately against their own rapidly diminishing oxygen supply, collapsed to their knees and began breathing gratefully. But he was doing his best. Next to a computer terminal. And so it was that the erstwhile Captain Tarra received his second brutal pounding of the day. And so it was that nobody on the Vishnu noticed, or was even capable of noticing, when a small explosion split open their ejected cargo container, letting the contents fall into dimensional space. Nor did they notice when, on the other side of the small rip in the maelstrom, the dead woman extended one hand and made a beckoning gesture, causing five small gems to float out of the ruptured pod. The dark gate snapped shut behind them, leaving no clues as to what, exactly, had made the Vishnu go completely insane. The dead woman smiled at the green globes floating serenely above her outstretched palm. I never would have expected to find five working units. Cold does funny things. I could conduct a study, if you wish.

5: Infinity Chapter 1: Foreword and Prologue, a magical girl lyrical nanoha fanfic | FanFiction

After sacrificing himself during Infinity War, Tony finds himself in the body of Jamie, a young boy who attempted suicide because of a life filled with hate and bullying, and died in Tony's body. Deciding he owes it to himself and the previous owner of the body, Tony decides he will no longer be.

Saebo Stroke Awareness Strokes and aneurysms are similar in some ways, but also different. While both have potentially disabling consequences because they directly affect the brain, strokes and aneurysms have different symptoms and are caused by separate events. Both strokes and aneurysms are serious conditions. Knowing more about them prepares you to understand and identify the symptoms faster so you can get medical help quickly. What is a stroke? A stroke happens if blood flow to the brain is compromised. This often occurs when a blood clot blocks one of the veins in the brain. Without oxygen which is carried by blood, brain cells begin to die, compromising cognitive functions in that specific area of the brain, which could include motor control, memory, language, and more. Strokes by a blood clot are called ischemic attacks. But another type of stroke is caused by blood making its way out of the veins and flowing uncontrollably hemorrhagic. What is an aneurysm? On brain imaging, aneurysms appear as a bulge and can look like a berry hanging on a stem. This is a blood vessel ballooning with blood because the vein is blocked or obstructed higher up. If this bulge aneurysm bursts, blood enters and damages the brain. When this happens, it is referred to as a hemorrhagic stroke. While brain aneurysms are less frequent than ischemic strokes, they are more deadly. Most aneurysms happen between the brain itself and the tissues separating it from your skull; this is called the subarachnoid space. Therefore, this kind of aneurysm is termed subarachnoid hemorrhage. These are often found while testing for different conditions or looking for a cause of the symptoms. When an unruptured aneurysm is found, it usually gets treatment, depending on its location and severity. This can prevent a dangerous rupture down the road. Aneurysms can have a genetic component, which makes you more prone to develop them. But the direct causes of aneurysms are the hardening of your arteries atherosclerosis and aging. Although aneurysms can happen to anyone, there are several factors that increase your risk of developing them. This is the genetic component of aneurysm risk. If there is a history of the condition in your family, there is a higher chance that you will also develop aneurysms. Statistics show that women are more at risk of developing aneurysms or subarachnoid hemorrhage. African-Americans tend to have more subarachnoid hemorrhage than people of European descent. Having a high blood pressure condition increases your risk of developing subarachnoid hemorrhage. If you smoke, not only are you at greater risk of having high blood pressure-related aneurysms, but they are also more likely to burst. What are the symptoms of aneurysm? Small, unruptured aneurysms tend to cause no noticeable symptoms. But if the aneurysm leaks or bursts, symptoms appear. However, a small leak almost always precedes a bigger leak or rupture later on.
