Two twin siblings live on a ranch in the middle of a desert and mountain range, helping out with farming and trying to do what they can in their spare time, which does not include television or any of the modern forms of entertainment we know, as the book was both written in and set in the s. One day, as the kids are exploring the mountains, a rattlesnake shows up, and just as suddenly, a talking stegosaurus crushes it flat and saves the kids. From that point on, since he revealed himself to the two kids, he agrees to become their friend. The story, essentially, is a slice of life story that just happens to have a huge dinosaur in it. The believability of the mundane makes the fantastic also believable, and fit in perfectly. The story just works. There is one complaint I have, though. Shy Stegosaurus is a fun, pleasant little story, but at the same time, the chapters are a little too long, and not much happens within them. By the time the book was over, I had enjoyed my time spent with George, but wished that a bit more had happened. But that may be a minor complaint for many. I have no idea whether or not it has stood the test of time, I only know that I remember discovering it on the book-mobile and loving it. I read it multiple times.

The animal jumps from a height and uses its plates as a gliding mechanism to chase and attack him; the real animal could not perform such an act. In Jurassic Park novel , the main characters come across a sick Stegosaurus at the south of Isla Nublar. The animal will later be replaced by a Triceratops in the movie adaptation. Cinema[edit] In the monster film King Kong , the first creature that the band of rescuers meet, as they chase the abducted Fay Wray deep into Skull Island, is a roaring Stegosaurus, which charges. In the Peter Jackson remake Stegosaurus is nowhere to be seen, although in the extended edition the Triceratops -like fictional Ferructus takes its place. A hypothetical descendant of Stegosaurus, called Atercurisaurus, appears in the tie-in book The World of Kong. However, this conflicts with the scientific fact that the two species did not co-exist at the same time in history. The infamous scene is echoed by a display at the Denver Museum of Nature and Science which shows a Stegosaurus facing off with an Allosaurus. Over the years, Stegosaurus has often been pitted in battle against large carnivorous dinosaurs, on both the big and small screen.
