*The Sirius Mystery is a non-fiction book by Robert K. G. Temple first published by St. Martin's Press in its second, , edition is called The Sirius Mystery: New Scientific Evidence of Alien Contact 5, Years Ago.*

Nov 08, Erik Graff rated it it was ok Recommends it for: I found the latter recently at the Amarynth Bookstore in Evanston. Excited by my purchase I began to read it immediately His reason for imagining such?: Beyond that his arguments depend a lot upon dubious etymologies in various languages and in what he sees as apparent similarities between the myths of various ancient cultures--none of which were very convincing, most of which became quite tedious to follow. I know enough, however, to understand what a guessing game etymology is and how fuzzy mythologetics is. At best, as with Joseph Campbell or C. Jung, the study of mythology can be connotatively suggestive. It is not, in my experience, denotatively exact. Thus I consign Mr. Temple to the realm of such outlandish speculators as Zechariah Sitchin. Zecharia Sitchin hypothesized that aliens came from a planet with an extreme elliptical orbit around our sun called Nabiru. The planet comes into contact with ours supposedly every 3, years and that aliens cam to our planet and spliced our genes. Now this is based on his reading of Sumerian, Egyptian and biblical scripture. Robert Temple has a more realistic theory and demonstrates his knowledge of pagan mysteries by elucidating Egyptian, Sumerian and Greek mysteries. The ancient Egyptians used to connect the Sirius star with Isis. It would disappear for about 70 days and then reappear bringing with it a flood on the Nile. The African tribe of Dogon also worshipped the Sirius star and they knew before modern science caught on that there was a Sirius B Star and a Sirius C star. Robert Temple revealed this knowledge in his book and the scientific community did not take him seriously in fact many big time organizations gave him a real rough time. His basic thesis is that several thousand years ago Aliens came from a planet that was from the Sirius star system and visited the planet Earth. They were amphibious in nature resembling the appearance of mermaids. It is from them that we get some of our earliest achievements, like building the pyramids and mapping the Arctic Circle before science even knew what it looked like without ice. These amphibious aliens existed in the water at night and then returned to their water chamber at night. We cannot duplicate some of this stuff today.. Some would speculate that it was all Aliens, some would say that we are not giving ancient man enough credit. Others would say that there were human civilizations going further back in time than we realize. Some would say that Atlantis was such a civilization and then it was destroyed by some cataclysm. Robert Temple rejects all that. He has his own theory and it does sound pretty plausible especially when he shows you direct quotes from Ancient Historians that describe the merman like nature of Oannes , who came from the sea and enlightened mankind. Whether or not I buy into his theory is a big question, but I do know there are lots of planets, galaxies an star systems out there so there is a good possibility that there is life on other planets an it certainly is possible they have contacted mankind. It still need to see more proof. Could it have ben that these mermen were natural inhabitant of this planet, an in between phase between amphibian and mankind.? Robert Temple does not claim that his theory is percent correct as it is just a theory. I will tell you one thing though , he has found a way to show his reader that all these ancient philosophies and religions come from a common source and he draws those connections extremely well. Whether you are into Ancient Alien theories or not this is one awesome book,

*Publication of The Sirius Mystery in set the world abuzz with talk of an extraterrestrial origin to human civilization and triggered a year persecution campaign against Robert Temple by the KGB, CIA, NASA, and other government agencies. Undaunted, however, Temple is back, with pages of new scientific evidence that makes his hypothesis more compelling than ever.*

It is mentioned as far back as the Babylonians and was used to help signal the annual flooding of the river Nile with the ancient Egyptians. Being the brightest star in the visible sky does make it quite hard to ignore and it is not hard to believe that it took a special place in many civilisations and cultures throughout human history. But like many notable objects in history, Sirius is not without controversy! This brings us to the Sirius Mystery. This Hubble Space Telescope image shows Sirius A, the brightest star in our nighttime sky, along with its faint, tiny stellar companion, Sirius B. Astronomers overexposed the image of Sirius A [at centre] so that the dim Sirius B [tiny dot at lower left] could be seen. The two stars revolve around each other every 50 years. Sirius A, only 8. NASA The human view of the world and universe throughout history has always been quite controversial, from arguments about the earth being flat to believing the Milky Way was the only galaxy in the Universe. With the advancement of technology and more thorough methods of research we have been able to disprove or correct certain beliefs and theories and give answers as best we can to some of those mind boggling astronomical questions. But that does not mean everyone comes to the same conclusions and may ignore sound practice to create something more fantastical! The Dogon are a small tribe with a population of , " , that can be found in the interesting stone hut cliffs of Bandiagara and Douentza areas in Mali near the Niger River. They have a vibrant culture and are famous for their masked dances, wooden sculptures, architecture and religious traditions which attract many tourists. But they have perked the interest of ancient astronaut chasers for well over half a century thanks to Robert K G Temple. Let me enlighten you. Between and they lived among the Dogon Tribe studying the tribe and their practices both past and present. This included all aspects of their culture and lore. It is here that Griaule recorded something unusual. The Dogon were reported to have been quite selective of who in their tribe knew of their history and lore and only a select few elders actually had the honour of having the oral history passed onto them. What is strange is that this was being recorded when it had not even been confirmed that there was in fact a companion star to Sirius; Sirius B , a white dwarf star first photographed in ! Other, more complete, versions of this diagram include many more symbols and the resemblance to an astronomical diagram disappears. We actually can find reference to strange creatures such as these in many ancient astronomical cultures including the Sumerians , Egyptians and Babylonians and this was one of the flimsy connections Temple tried to piece together to try and prove the truth to the existence of these ancient alien astronauts by linking them to the part fish, part men creatures that an ancient Babylonian writer called Berossos claimed emerged from the ocean to teach civilisation to Humanity. He also accepts that there are other stars in the Sirius star system, including a third companion star, Sirius C which has never been photographed and only a minority of astronomers believe in its existence. Perhaps it is in everyone to hope that aliens have visited us before as that does make things seem more interesting. All in all it sells books to have an unusual hook. But forgive the wet blankets of the world; the reality is much more beneficial no matter how boring some may believe it to be. Even having the slightest amount of common sense would have you asking questions about his dubious claims in The Sirius Mystery. You do not have to dig far to start seeing the more logical explanations of the findings of Griaule and Dieterlen. First look at the claims of seeing the rings of Saturn and the largest moons of Jupiter. Yes, they were not officially discovered until the creation of the telescope but perhaps, with the much darker skies of the past and maybe even with a simple magnifying object, seeing these astronomical objects may not have been as impossible as we may think. Early Chinese astronomers have records of a moon going around Jupiter using just the naked eye. There is also a simplistic technique that some reports say can help us see the fainter objects in the night sky. So instead of looking at an object straight on you avert your vision so that it is not directly in your eye line but rather to the side. Some people who have done tests with this method have claimed they have

gained up to magnitudes and that the method really helps people to see nebulae and star clusters , although of course some have claimed that it did not work for them at all. But did Temple consider or explore any of these avenues? In short – no! Telescope users will be aware that these moons never appear scattered around the planet like this. The answer would be no! Strangely enough there were many people over the years who did not just accept these findings and did question them but it was not until that someone actually went and visited the Dogon tribe and checked the facts with the existing tribe members. Anthropologist Walter Van Beek had taken an interest in the topic and decided to get answers of his own which really lays all bare. They knew it was of course a star but in Van Beek's findings, it appeared none of the elders he asked even believed astronomy to be an important part of their religion. The original description of To Polo, which was assumed to be Sirius B differed to the various descriptions of it by the tribe members that Van Beek asked. They actually stated that To polo would get brighter some times and would sometimes appear like a group of twinkling stars. A reference that some believe sounds much more like the star cluster the Pleiades. All this is a little too messy and confusing to really suggest a definitive answer to what it could be. Van Beek found that the main astronomical influence in Dogon religion, if any, was actually more focused the position of the Sun and the phases of the moon. Outrageous claims like this can cause a well-respected author to become a laughing stock over night and normally one would seek much more concrete evidence before putting it out for the world to see. Griaule died in so has missed all the controversy around their work but Germaine Dieterlen did live to see it. But she did not. Instead she rather begged for Van Beek not to publish it and never once defended it or questioned his findings. This lack of defence really seals the deal in my eyes and pokes the final holes in the flawed work. But if you really open your mind and apply common sense and just do the slightest bit of research into it, it really falls apart. There is too much that makes no sense and too many plausible explanations. As my mother has always said, the simplest explanation is often the right one! And as my university lecturer always said, never rely on just one source! I believe temple claims that Sirius has a third star too, Sirius c, this could be a dim red or brown dwarf although nothing has been found –!. Leave a Reply Your email address will not be published.

*The Sirius Mystery "It's aliens I tell you?" Yeah Yeah we have heard it all before. Zecharia Sitchin hypothesized that aliens came from a planet with an extreme elliptical orbit around our sun called Nabiru.*

Sirius glitters in our lodges as the Blazing Star. I have a very friendly acquaintance with Christopher Knight and Robert Lomas, whose second book *The Second Messiah Century*, London, contains nearly a page about me p. Unfortunately, Chris and Bob did not inform me that they intended to publish anything about me and did not show it to me beforehand. Because they remembered a conversation with me imperfectly, the account contains several inaccuracies. This is inaccurate; he only wanted me to become 3rd Degree to commence the conversations, for only then does one "become a Mason"; going through the much higher degrees would, he said, be accelerated, but was not necessary to begin holding meaningful dialogue. They also stated that I am a direct descendant of George Washington. As much as I admire old George, I have never claimed to be his descendant! He was originally, as a very young man, a mounted dragoon under Major Bartholomaeus Van Heer in , along with his three brothers. The Leonard Brothers were exceptionally tall and phenomenally strong. They were among the handful of people fighting on the side of Washington who knew anything about being soldiers. They had one other advantage: Since the *Sirius Mystery* is concerned with teeth and with Greek heroes, I cannot refrain from mentioning a peculiarity of John Leonard which he shared with the mythological figure of Hercules. Hercules was reputed to have had, and John Leonard certainly had, a third set of teeth. Growing a third set of teeth in ancient times was meant to be a sign of a supernatural hero. As Edward Samson the dental historian has written " So perhaps there is a very rare genetic syndrome - whereby a man of abnormal size and strength with a third set of teeth occurs in the population; this could be part of the rational background to the lore concerning Hercules and Gilgamesh "The hero, his teeth are the teeth of a dragon" as we have seen on p. My forebear was, according to the family account, very depressed when his teeth started falling out when he was in late middle age. But everyone was amazed when they were replaced by a completely new set! Dentists of whom I have enquired speculate that this happens to approximately one person out of every hundred million or so, being one of the rarest phenomena in the lore of human anatomy. In fact it seems to be much rarer than that, probably by a factor of ten or more. But so much for teeth and heroic figures! I am certain that the Leonard Brothers must have taken part in Masonic Lodge meetings with George Washington, if only due to the fact that by virtue of their jobs they could not leave his side for years on end. Whether they were Masons before they came to America is something we will never know. They were my great-grandparents. Their families had lived in the same German city, presumably unknown to one another, and had to travel to Ohio on the other side of the world to meet and marry. The Mondes changed their name in America to Miller to avoid anti-Semitism, as they settled in the most German and most anti-Semitic city in the United States at that time, Cincinnati. Now, this great-grandfather was a 32nd Mason "Sublime Prince of the Royal Secret", to use the official title. Meanwhile another family, the Temples, entered the scene, and they were all senior Masons as well, including my great-grandfather and his three brothers. All of my great-great uncles and great-uncles of all these families were Masters of their lodges, several of them were 32nd Degree Masons, my Grandmother Temple was also Matron of her own Eastern Star Lodge, and for good measure my mother was a member of Eastern Star although not very active. I am also descended from the Kyle family including a Colonel under George Washington , and they were all senior Masons as well. Rarely has anyone been born into such a welter of family Freemasonry. I believe that amongst my immediate relations, there must have been at least a dozen 32 Degree Masons, and at least thirty Masters and Matrons of lodges. And it is certainly true to say, as Knight and Lomas did, that my family have been prominent Masons for more than years. In my dinner speech after my own initiation to the third degree I pointed out that the members of my family who had been Masons would, if they could all be called back to life again, exceed in number the large body of men present at the dinner. But to return more particularly to the story told by Knight and Lomas and how it relates to *The Sirius Mystery*. The most important Mason in my family from my point of view was my grandfather, who was also called Robert Temple. He was a 32nd Degree Mason and so highly respected in

Masonry that he was asked to become a 33rd Degree Mason, which is the highest degree possible called Grand Inspector-General. However, he had to decline this invitation because it takes up so much time and in those days was also extremely expensive, and he had lost his money in the Great Depression. But he sponsored into Freemasonry a young man whom he liked very much called Ted Webber. And Ted Webber went on to become a very active and important 33rd Degree Mason, and a close friend and colleague of Sovereign Grand Commander Henry Clausen, as well as of those other prominent 33rd Degree Masons, President Gerald Ford and American Astronaut Colonel "Buzz" Aldrin, who carried a Scottish Rite flag to the Moon, emphasizing the interest the highest level of Freemasonry takes in worlds beyond our own. So it was Charles E. Apart from my mother, all of my Masonic relatives were dead by then or were cousins whom I never saw. Ted knew that I had no obvious route into Masonry and did what Masons are not supposed to do, actually recruited me. Masons are only supposed to join if they seek to do so, never be persuaded. Although he felt "fraternal loyalty" to use Masonic terms towards me, his reason was not sentimental but practical. He said quietly to me: We realize you have written this without any knowledge of the traditions of Masonry, and you may not be aware of this, but you have made some discoveries which relate to the most central Masonic traditions at a high level, including some things that none of us ever knew. We would very much like to get you to exchange some ideas and research with some of the people in our headquarters. But unfortunately because you are not a Mason we cannot discuss any of these matters with you, as it is forbidden. Ted asked me if I would like to become a Mason, and if so would arrange it immediately. I would never have sought it on my own initiative. Ted wrote to Commander M. They are very loyal American citizens. Robert has been living in England for a number of years and has published a number of books. I will appreciate it very much if you will have some of your brethren get in touch with him I believe this was practically unprecedented, and well might one imagine the astonishment of the local lodge who contacted me and said they had had a request for my admission from Brother Higham - a man whose name is known from Masonic circulars but no one ever seems to meet him. It takes some time to go through the three separate initiation ceremonies called the three degrees, as several months have to elapse between each one. It was a year and a half or two years before I completed this. At the end, I was given a certificate pronouncing me a "Master Mason", which sounds a very grand term but merely means you have gone through the basic initiations. In Masonic correspondence, I can now sign myself "Robert Temple, 3rd Degree", by way of identifying my status, if corresponding with, say, a really important Mason or making clear I am not still just a candidate. I discovered that the vast majority of Masons know nothing whatever of the higher degrees of Masonry, and are never invited to attain to them. Some vaguely know that what are called "Mark Masons" - a separate order within the movement where, I was told, a great deal of beer-drinking takes place - is also a fourth degree. But few Masons seem to be intellectuals pursuing ancient mysteries - most of them seem content with jolly dinners, collections for charity, and fraternizing with one another in a hearty manner. By the time I had become eligible for conversations on "Sirius" matters, Ted was pretty aged and I never returned to Virginia. So no further discussions on these issues ever happened. Ted died, a pillar of his community and of American and World Scottish Rite Freemasonry, noted for his rectitude and kindness. And that was that. Knight and Lomas have done a good job of demonstrating that many people including myself had long assumed, that Freemasonry is directly descended from, and is a continuation of, the Knights Templar. Although the Knights Templar were suppressed in England and France, they continued in Scotland hence "the Scottish Rite"; manuscript records of sixteenth-century Scottish lodge meetings survive and by the seventeenth-century spread back into England again. English Freemasonry likes to pretend that the Masonic Movement was founded in , but that can be proved to be complete nonsense. As for the Sirius mystery and Freemasonry, there are some further speculations. After the publication of my book, various people wrote to me and asked me whether I knew the writings of Alice Bailey, who produced many volumes of mystical works supposedly inspired by "Higher Beings", communicated to her in trance. Much of what she wrote concerned a kind of cosmic Freemasonry. I had no familiarity with this material but tried to look into it. My friend, the late Sir John Sinclair, Bart. He attempted to search for Sirius references for me. I discovered that Miss Bailey had maintained that "the Great White Lodge" of Freemasonry was based at the Sirius System, and that it is always beaming helpful rays to the poor people of Earth who wallow in appalling ignorance,

violence, and oppression. We earthlings are looked upon as a dangerous lot, and the Sirians have tried hard to civilize us without much success. Freemasonry is meant to be one of their civilizing forces here. Of course the corrupt Masonic lodges such as P-2 would form no part of this. Amongst material handed to me by John before he died, not all of it by Alice Bailey, and much of it odd photocopied pages without proper referencing information, I find comments such as these: Our solar system in which our Earth exists is one of them. There are millions of stars but, among them all, only the star Sirius has a direct link with the Earth and with humanity. Much was known to the Ancients about Sirius, now largely lost but recoverable Pondering upon the implications of this statement is fascinating because it lifts the whole concept of Masonry as a spiritual quest on to a higher plane than ever known before. It gives meaning and depth to the question: It will be no detriment to Masonry if we use the "as if" technique of philosophy which does not hesitate to deal with that which is yet unproven. More Masons are asking more fundamental questions about Masonry these days Among such questions is: Where did Masonry originate? Because the star Sirius is older than the Earth Masonry could have existed there long before our Earth Masonry began. By implication there is human life on Sirius Our solar system receives energy from three main sources. There are three great waves of energy which sweep cyclically through our solar system, one of which comes from Sirius. There are seven paths of progress open to man when he has learned all that human evolution on Earth can teach him. One is the path to Sirius. He arrives there in consciousness as a perfected human being. It follows that there is therefore a type of life on Sirius which includes the essential of human life on Earth. This includes Masonry and he finds that great spiritual fraternity already there.

*This brings us to the Sirius Mystery. This Hubble Space Telescope image shows Sirius A, the brightest star in our nighttime sky, along with its faint, tiny stellar companion, Sirius B. Astronomers overexposed the image of Sirius A [at centre] so that the dim Sirius B [tiny dot at lower left] could be seen.*

Some of it has only been discovered very recently by modern scientists, half a century after it was recorded by anthropologists studying the tribe. The situation regarding The Sirius Mystery has changed completely since the initial edition of the book was published in . Some critics said this proved the hypothesis of the book to be false. If the Earth had been visited by intelligent beings from the system of the star Sirius in the distant past, and they had left behind all this precise information about their star system, the fact that they described the existence of a third star, a Sirius C, whose existence could not be confirmed by modern astronomy rendered the whole account untrustworthy. However, the existence of Sirius C has now been confirmed after all. The basis of science is that you put forward a hypothesis containing a prediction, and you then seek to verify or refute that prediction. If the prediction is confirmed, the hypothesis is considered to be verified. The hypothesis of The Sirius Mystery has now been verified in a dramatic fashion. In and in the years immediately following I predicted on numerous occasions that the existence of a small red dwarf star would be verified in the Sirius system, to be called Sirius C according to the standard naming schemes of astronomy there already being an A and a B. This has now happened. In the French astronomers Daniel Benest and J. Duvent published the results of years of study in the journal *Astronomy and Astrophysics* stating that a small red dwarf star, Sirius C, seems to exist in the system of the star Sirius. This verification is a highly specific astrophysical prediction which has now been confirmed. It is not as if I had predicted that, say, a comet would approach Earth in . There are many comets, and one might approach Earth at any time. But when one predicts that a star will be discovered in a specific star system and that it will be a specific type of star, and when this indeed happens twenty years later, that is rewarding. What is the hypothesis, then, which has been so startlingly confirmed in the best traditions of science? It is that our planet has at some time in the past been visited by intelligent beings from the system of the star Sirius. This suggestion is no longer considered as astounding as it was in . After all, The Sirius Mystery generated enormous discussion around the world, and has done so continuously since its appearance. Many years have passed and public opinion has undergone a sea change. This book seems to have founded a genre of books, and there are several bearing the names of Sirius or Orion in their titles. See Bibliography for Robert Anton Wilson. I was recently surprised to learn that the Internet has many web sites discussing The Sirius Mystery, and there seems to be a whole Sirius Industry out there in cyberspace somewhere. A friend recently asked me: Many of my pleas in have been answered: Another man read my book in while traveling in Egypt and decided to undertake his own researches relating to the subject: He contacted me several times and when we finally met, he urged me strongly to revise and reprint this book. I took his suggestion seriously, as you can see. In this first portion, Temple defines the nature of the argument and quite rightly takes credit for a successful, specific, prediction. Note how the critics, some of whom found it necessary to attack the book in the reviews section of Amazon. As you will see, Temple is not only a brother in arms when it comes to the nature of the attacks on his work, but also in the identity of the attackers Since the original publication of The Sirius Mystery was a whole generation ago, few will recall the amazing excitement generated by its appearance. No book quite like that had ever been published before. But I had to apologize constantly for talking about little green men, and some close friends dropped me entirely and never spoke to me again because extraterrestrials at that time were not deemed socially acceptable, not any discussion of them. For instance, an older woman with whom I had had what I thought was a close friendship for years, turned her back on me completely after publication of The Sirius Mystery, and mutual friends said it was because I had published something about spacemen, which she thought was simply an appalling thing to do. A number of British scholars whom I knew used to ridicule the fact that I had discussed something as lowbrow as spacemen, and I was therefore clearly not a respectable person. But the critical reception of The Sirius Mystery in the British press in its first year was universally ecstatic. It got favorable lead reviews on the

day of publication in *The Times* and the *Telegraph*, and then a seemingly endless mass of reviews in nearly every newspaper and magazine in Britain - all favorable. No one was more surprised than my publisher, who had dragged his feet for about three years after delivery of the manuscript before the book came out. My advance for the book was 1b, if you want to know, and no royalties were due for three or four years after delivery because of publication delays. But the book then went on to become a worldwide best seller, even in such unexpected places as the former Yugoslavia. The country where it was most appreciated was Germany, where it was on the bestseller list for more than six months. Soon after initial publication, the book was favorably reviewed in a lead review by a professor of astronomy for *Nature* magazine. Later it was reviewed in *Time Magazine*. The British astronomical community, which is not an arrogant community, seemed relatively unshocked by my book. So much was I accepted as part of the background radiation, albeit a rather aberrant part of it, that some good-humored joking about me appeared in *The Observatory*. I was thrilled when a spoof appeared in their joke issue of October, 4 as I enjoy anything of that kind. In Germany some of the cartoons about the *Sirius Mystery* appeared in the newspapers, and that delighted me too. A newspaper cartoonist in America spoofed the *Sirius Mystery*, and Faith Hubley, an Oscar-winning film animator, did some charming fey animated films inspired by it only generally inspired, so no income alas. I remember going to see her in New York and holding her three Oscars all at once - how many people have three Oscars on view in their sitting rooms? I certainly met a lot of interesting characters through the *Sirius Mystery*. But others I avoided. For instance, the late Timothy Leary was very keen for me to join him in California for some joint grooving on the subject of Sirius, after he got out of prison, but the idea of such a thing was so repellant to me that it still makes me shudder. There is nothing I hate quite so much as drugs and the drug-culture. But the sad part of the aftermath of *The Sirius Mystery* was the extreme and virulent hostility towards me by certain security agencies, most notably the American ones. Since I am myself an American by origin, I found this insulting and distressing. On several occasions I was targeted in ways so extreme that they seemed hysterical beyond all belief. I am certain that false information was entered into my security files to blacken my reputation. To give an example, I was co-editing a magazine at one time and decided to join the Foreign Press Association FPA in London so that I could have lunch there and get a press pass. I was told I needed two members to recommend me, and was given the names of two American journalists in London who should be happy to do so. I later wrote for her London bureau for several years and did British science reporting for *Discover* magazine. I then went to another man who was equally friendly and he said he would, and signed my form. That particular man, whom I do not wish to identify, had certain connections in Washington, if you take my meaning. A few hours later, Catherine Postlethwaite, the Secretary of the FPA, told me she had a hysterical phone call from a man insisting that he wanted to use his blackball against me and stop me from joining the FPA. She was completely astonished and said to him he had just signed my form and now on the same day he was trying to blackball me, and how could he possibly explain that? He refused to explain, but was relentlessly insistent. She and the Council took the view in the end that the man was acting unreasonably, for whatever motives, and they overruled his blackball. But I recognized a pattern of behavior which has assailed me on many occasions. There was another time, for instance, when I had commenced what was meant to be a profitable association with a man I knew to make several series of corporate videos, with me as writer and co-producer and his company providing the finance and facilities. We made one video and suddenly everything stopped mysteriously. After some time he told me: So that is the reason, and the only reason, why I am withdrawing from our projects together. Several other people were as well. Indeed, one old fellow I was friendly with, a retired Brigadier Shelford Bidwell, actually told me that he had been asked to read *The Sirius Mystery* and write a thorough report on it for the British security services. He had found it rather difficult because it was not his kind of subject! When I expressed astonishment that he had read something so far from all his other interests, he first said that he had read every word meticulously, as if that explained everything. When I protested that this was quite unbelievable, he had to explain why he had done so. Another old friend, whom I had known when he was a policeman in a panda car and who is now a famous police commissioner, said he had been approached by MI5 to do a security report on me. He tried to tell them there was nothing at all suspicious about me and that he knew me well, and he wrote up everything he could find about me trying

to demonstrate that I was harmless. This prosecution went on for more than fifteen years. It cost me income, career opportunities, advancements, and friends. I often wonder about it, especially the frenzied aspects of it. Why were so many people in high places foaming at the mouth in such an uncontrollable manner? Just what was it that I had done? I have never known. What Temple had done was to violate the inviolate. Clarke reiterated 9 years later in " - A Space Odyssey ," there must be a period of preparation before certain disturbing truths can be revealed. Obviously, someone at these intelligence agencies was upset that Temple might be jumping the gun and getting a bit too close to the truth. So he was roughed up a bit to keep him from pursuing the Mystery. This is no idle speculation. The bottom line is that there is no mundane scenario under which research into the beliefs of an ancient tribe of Africans can be of any interest to intelligence agencies concerned with national security. Unless of course the very idea of alien intervention in human affairs or public attention being focused on Sirius itself is in some way a security threat. As you will see, it only gets better There were two employees of NASA who made attacks on me which I thought went far beyond mere critical disagreement. Bob Freitag and I met through Arthur C. Clarke and when he came to London, Bob and I would often meet for dinner, as we were both very keen on good food and I would try to find something unusual, such as a Hungarian restaurant. On a visit to Washington I called in to see Bob Freitag and he said he had a very bright fellow who worked for him called Jesco von Puttkamer, whom he wanted me to meet. He called him in and I told both of them about The Sirius Mystery.

*The Sirius Mystery. by Robert Temple. extracted from The Sirius Mystery Second Edition Chapter I August, How could the ancient and secret traditions of an African tribe contain highly precise astrophysical information about invisible stars in the Sirius star system? Some of it has only been discovered very recently.*

His books have been translated into a total of 44 foreign languages. He combines solid academic scholarship with an ability to communicate with the mass public. For many years he was a science writer for the Sunday Times, the Guardian, and a science reporter for Time-Life, as well as a frequent reviewer for Nature and profile writer for The New Scientist. He is a Fellow of the Royal Astronomical Society, and has been a member of the Egypt Exploration Society since the 1950s, as well as a member of numerous other academic societies. Temple was a colleague of the late Dr. Joseph Needham of Cambridge, in association with whom he wrote The Genius of China, which has been approved as an official reference book in Chinese for the Chinese secondary school system, and which won five national awards in the USA. He has done archaeometric dating work and intensive exploration of closed sites in Egypt with the permission of the Egyptian Supreme Council of Antiquities. His research into historical accounts of the Sphinx is the first comprehensive survey ever undertaken. A fascinating look into the real history of the ancient civilisations, including revelatory new evidence which challenges accepted truths about the history of Egypt. The mysteries of Ancient Egypt have proved an endless source of fascination to the world. Here, for the first time, international bestselling author Robert Temple seeks to expose the real history of this ancient civilisation. In this fascinating study, Temple unearths revelatory new evidence which challenges accepted truths about the history of Egypt and questions the evidence which most Egyptologists have relied on since. In so doing he has sought to answer the two big questions which have until now been taken for granted: Where did Egyptian civilisation come from? And who built the pyramids, and why? With unprecedented access to lost portions of the valley temple which have long been closed to archaeologists, Temple presents a sensational, reconstructed story of Egypt which exposes a magnitude of previously unseen evidence, including: Pinpointing exact locations of unopened royal tombs Presenting re-datings of key monuments using a revolutionary new dating technique Exposing faked evidence which has been credulously accepted by the Egyptological community Revealing who really built the pyramids The Great Pyramid could not have been built by King Cheops, nor was it his tomb. But Robert Temple has discovered the precise location of the real tomb of Cheops, which has never been opened since his burial, and is elsewhere at Giza For more information on Egyptian Dawn visit the dedicated site at [www.egyptiandawn.com](http://www.egyptiandawn.com). Revealing that the Sphinx was originally a monumental Anubis, the Egyptian jackal god, and that its face is that of a Middle Kingdom Pharaoh, Amenemhet II, which was a later re-carving. In addition, photographic evidence of ancient sluice gate traces to demonstrate that, during the Old Kingdom, the Sphinx as Anubis sat surrounded by a moat filled with water--called Jackal Lake in the ancient Pyramid Texts--where religious ceremonies were held. Robert Temple provides evidence that the exact size and position of the Sphinx were geometrically determined in relation to the pyramids of Cheops and Chephren and that it was part of a pharaonic resurrection cult.
