

1: Doreen Ellen (née Skinner) Carroll - Obituaries - Kingston, ON - Your Life Moments

The Skinner family name was found in the USA, the UK, Canada, and Scotland between and The most Skinner families were found in the USA in In there were Skinner families living in New York.

Operant conditioning chamber An operant conditioning chamber also known as a Skinner Box is a laboratory apparatus used in the experimental analysis of animal behavior. It was invented by Skinner while he was a graduate student at Harvard University. As used by Skinner, the box had a lever for rats , or a disk in one wall for pigeons. A press on this "manipulandum" could deliver food to the animal through an opening in the wall, and responses reinforced in this way increased in frequency. By controlling this reinforcement together with discriminative stimuli such as lights and tones, or punishments such as electric shocks, experimenters have used the operant box to study a wide variety of topics, including schedules of reinforcement, discriminative control, delayed response "memory" , punishment, and so on. By channeling research in these directions, the operant conditioning chamber has had a huge influence on course of research in animal learning and its applications. It enabled great progress on problems that could be studied by measuring the rate, probability, or force of a simple, repeatable response. However, it discouraged the study of behavioral processes not easily conceptualized in such terms—spatial learning, in particular, which is now studied in quite different ways, for example, by the use of the water maze. Skinner designed it for use with the Operant chamber as a convenient way to record and view the rate of responses such as a lever press or a key peck. In this device, a sheet of paper gradually unrolls over a cylinder. Each response steps a small pen across the paper, starting at one edge; when the pen reaches the other edge, it quickly resets to the initial side. The slope of the resulting ink line graphically displays the rate of the response; for example, rapid responses yield a steeply sloping line on the paper, slow responding yields a line of low slope. The cumulative recorder was a key tool used by Skinner in his analysis of behavior, and it was very widely adopted by other experimenters, gradually falling out of use with the advent of the laboratory computer. Ferster, Schedules of Reinforcement, is full of cumulative records produced by this device. It was designed to make early childcare simpler by reducing laundry, diaper rash, cradle cap, etc. Reportedly it had some success in these goals. Great Psychology Experiments of the Twentieth Century [45] caused a stir by mentioning the rumors that Skinner had used his baby daughter, Deborah, in some of his experiments, and that she had subsequently committed suicide. This review was read by Deborah Skinner now Deborah Buzan, an artist and writer living in London who wrote a vehement riposte in The Guardian. There was also a mechanism through which the learner could respond to each question. Upon delivering a correct answer, the learner would be rewarded. For example, one machine that he envisioned could teach rhythm. A relatively simple device supplies the necessary contingencies. The student taps a rhythmic pattern in unison with the device. The process is repeated for various speeds and patterns. In another arrangement, the student echoes rhythmic patterns sounded by the machine, though not in unison, and again the specifications for an accurate reproduction are progressively sharpened. Rhythmic patterns can also be brought under the control of a printed score. As a result, students were interested, attentive, and learned efficiently by producing the desired behavior, "learning by doing. For example, if a student made many incorrect responses, the machine could be reprogrammed to provide less advanced prompts or questions—the idea being that students acquire behaviors most efficiently if they make few errors. Multiple-choice formats were not well-suited for teaching machines because they tended to increase student mistakes, and the contingencies of reinforcement were relatively uncontrolled. Not only useful in teaching explicit skills, machines could also promote the development of a repertoire of behaviors that Skinner called self-management. Effective self-management means attending to stimuli appropriate to a task, avoiding distractions, reducing the opportunity of reward for competing behaviors, and so on. For example, machines encourage students to pay attention before receiving a reward. This practice fails to reinforce correct behavior and actually counters the development of self-management. Skinner pioneered the use of teaching machines in the classroom, especially at the primary level. Today computers run software that performs similar teaching tasks, and there has been a resurgence of interest in the topic related to the development of adaptive learning

systems. Although missile and TV technology existed, the size of the primitive guidance systems available rendered automatic guidance impractical. To solve this problem, Skinner initiated Project Pigeon , [52] [53] which was intended to provide a simple and effective guidance system. This system divided the nose cone of a missile into three compartments, with a pigeon placed in each. Lenses projected an image of distant objects onto a screen in front of each bird. Thus, when the missile was launched from an aircraft within sight of an enemy ship, an image of the ship would appear on the screen. The screen was hinged, such that pecks at the image of the ship would guide the missile toward the ship. Skinner complained that "our problem was no one would take us seriously. Thus, as with the Rorschach blots, the device was intended to yield overt behavior that projected subconscious thoughts. The device also led other researchers to invent new tests such as the tautophone test, the auditory apperception test, and the Azzageddi[when defined as? Verbal Behavior book Challenged by Alfred North Whitehead during a casual discussion while at Harvard to provide an account of a randomly provided piece of verbal behavior, [59] Skinner set about attempting to extend his then-new functional, inductive approach to the complexity of human verbal behavior. Behavior analysts reject the "S-R" characterization: Please help improve this article by adding citations to reliable sources. Unsourced material may be challenged and removed. Skinner argued that education has two major purposes: Because he believed that human behavior can be affected by small consequences, something as simple as "the opportunity to move forward after completing one stage of an activity" can be an effective reinforcer. Skinner was convinced that, to learn, a student must engage in behavior, and not just passively receive information. Skinner believed that effective teaching must be based on positive reinforcement which is, he argued, more effective at changing and establishing behavior than punishment. He suggested that the main thing people learn from being punished is how to avoid punishment. For example, if a child is forced to practice playing an instrument, the child comes to associate practicing with punishment and thus learns to hate and avoid practicing the instrument. This view had obvious implications for the then widespread practice of rote learning and punitive discipline in education. The use of educational activities as punishment may induce rebellious behavior such as vandalism or absence. In *The Technology of Teaching*, Skinner has a chapter on why teachers fail pages 93â€” He says that teachers have not been given an in-depth understanding of teaching and learning. Without knowing the science underpinning teaching, teachers fall back on procedures that work poorly or not at all, such as: Skinner suggests that any age-appropriate skill can be taught. The steps are Clearly specify the action or performance the student is to learn. Break down the task into small achievable steps, going from simple to complex. Let the student perform each step, reinforcing correct actions. Adjust so that the student is always successful until finally the goal is reached. They are also reflected in Fred S. The productivity and happiness of citizens in this community is far greater than in the outside world because the residents practice scientific social planning and use operant conditioning in raising their children. It encourages a lifestyle of minimal consumption, rich social relationships, personal happiness, satisfying work, and leisure. We would, however, have to accept that an autonomous agent is not the driving force of our actions. Skinner offers alternatives to punishment, and challenges his readers to use science and modern technology to construct a better society. For example, his views led him to oppose corporal punishment in schools, and he wrote a letter to the California Senate that helped lead it to a ban on spanking. If the world is to save any part of its resources for the future, it must reduce not only consumption but the number of consumers. Skinner, *Walden Two*, p. And what does he say to reassure himself? Skinner, from William F. Buckley Jr, *On the Firing Line*, p. Another repeatedly thrust its head into one of the upper corners of the cage. Two birds developed a pendulum motion of the head and body, in which the head was extended forward and swung from right to left with a sharp movement followed by a somewhat slower return. The experiment might be said to demonstrate a sort of superstition. The bird behaves as if there were a causal relation between its behavior and the presentation of food, although such a relation is lacking. There are many analogies in human behavior. A few accidental connections between a ritual and favorable consequences suffice to set up and maintain the behavior in spite of many unreinforced instances. The bowler who has released a ball down the alley but continues to behave as if she were controlling it by twisting and turning her arm and shoulder is another case in point. By looking at the timing of different behaviors within the interval, Staddon and Simmelhag were able to distinguish two classes of

behavior: Terminal responses seem to reflect classical as opposed to operant conditioning, rather than adventitious reinforcement, guided by a process like that observed in by Brown and Jenkins in their "autoshaping" procedures. The causation of interim activities such as the schedule-induced polydipsia seen in a similar situation with rats also cannot be traced to adventitious reinforcement and its details are still obscure Staddon, Staddon[edit] As understood by Skinner, ascribing dignity to individuals involves giving them credit for their actions. To say "Skinner is brilliant" means that Skinner is an originating force. He is not an originating force and he had no choice in saying the things he said or doing the things he did. Similarly, the environment and genetic potentials of the advocates of freedom and dignity cause them to resist the reality that their own activities are deterministically grounded.

2: Young Love in the Old South | Skinner Family Papers

Reuben SKINNER, son of 1st Rev. Nathaniel SKINNER, is buried in the same graveyard as his father, and his tombstone shows that he died April 21, , aged 78 years. This shows that he was born in

Daniel Skinner and his Family First Generation 1. He died in Jun in Bangor, Penobscot, Maine. Daniel served in the military Revolutionary War about Daniel was a Revolutionary War soldier in a Massachusetts Regiment. He appears not to have asked for a pension. In , Daniel Skinner established the first permanent occupancy and continuously occupied farm in the area today known as Corinth, Penobscot, Maine. Daniel arrived with his cousin Elisha Skinner who practiced both medicine and inn keeping , and six children, four of them grown. He arrived from nearby Brewer, Maine. He had arrived in Brewer in from Mansfield, Massachusetts where he kept a tavern. Daniel and his second wife, Mrs. Miriam Grover and son Asahel to Brewer, Maine. The purchase price was considerably less than the market value of improved land and reflected the labor equity which the Skinners had invested in the land. He chose this vicinity because he thought it was the right distance from Bangor for a tavern stand. The settlement--a village that contained not only the farm, but a meeting house and a general store--was home to five generations of Skinners. The last was Nellie Skinner who died while living on the family farm in at age The structure has since been torn down. Daniel died at one month shy of his 98th birthday, and was known as the first "Grand old man" of the town. On page 15 of the town records of birth and marriage, his entry reads, "born June 29, O. We know that four generations earlier that Thomas Skinner was from England. Thomas arrived in Mass. Descendants p To Corinth as first permanent occupant in after six years in Brewer. To Brewer from Mansfield, MA, where he had kept a tavern. Served as Corporal and Sergeant in Capt. Daniel and Abi both of Mansfield, MA. Some have given Abigail Knapp, rather than Abigail Briggs, as wife. Mr Daniel Skinner, formerly from Mansfield, but more recently from Brewer ME with three sons and three daughters at all ages of maturity Daniel served in in Capt. The house Daniel built in is still in use today The area is called the "Skinner Settlement. It has been designated an Historical Site: After the war he and his cousin once removed Dr. They came by boat and brought considerable impedimenta; even a cow. His grandfathers clock along with some peices of furniture are still at the old farm in Corinth. After getting established in Orrington, Daniel built a log cabin inn at what is now Corinth some twenty miles north up Kenduskeag stream. This was a logical place for an inn as it was on the direct route to the Moosehead Lake region. This was being opened up by trappers, etc. One of the first things Daniel did was to bring his grandfathers clock up from Orrington. This he did by dismateling it and making three trips on horse back over what must have been a very poor trail. Abigail died with her third child, Abigail, of chilbirth complications. Daniel and Abigail had the following children: He died on 29 Mar She died on 10 Oct Daniel married 2 Mrs. Her first name has also been spelled Mariam on the Skinner website. She died on 15 Dec He died on 18 Apr She died on 22 Mar He died on 29 Jan He died on 29 Mar in Rutland, Meigs, Ohio. Asahel was counted in a census in in Rutland, Meigs, Ohio. He was counted in a census in in Rutland, Meigs, Ohio. This announcement was published in Orrington at that time. Asahel moved with his father and family from Brewer to Corinth, Maine. Asahel is listed on page 84 of the reprint and page 68 of the original book. He must have done some travel before moving to the West definitaively, if this activity in the war is accurate, as it is about 4 years before his move. According to John B. He grew discontented while living in the Skinner Settlement hearing stories of Ohio. In fact, there was quite a rush to go to Ohio at that time. A group of people in Orrington who were considering going finally located in what is part of Levant near the Skinner Settlement and named it the Ohio Settlement. In Asahel, Phebe who was pregnant, the children and a cow set out for Ohio. They did arrive finally and Asahel lived out his eighty years in Rutland, Ohio. Asahel abandoned twenty-five years of labor in Corinth to set out for Ohio about with a yoke of oxen, a cow, his pregnant wife and their thirteen children. Another child was expected in , though it would appear that Phebe and last baby died close to the birth. Newer information states that Asahel was 27 when his first child was born; he was 66 when the last arrived. That means that he had 23 children over the course of 39 years, 14 by his first wife and nine more with his second. When he died, his youngest, if it had survived, would have

been about 31 years old; his oldest had she survived, would have been 70! Asahel died at age On 14 January , Daniel W. A film , page Asahel is buried next to his eldest son Daniel in Miles Cemeter. The child was 22 so it should be Darius Calvin. Pioneer History of Meigs Co. Two of their children remained in the East. We will have to publish them in installments. I have used his spelling and lack of punctuation. No capitals to begin a sentence. You know, teachers did not always spell properly then. He was a fine penman, but the originals are yellow and do not copy well. Asahel is pronounced ash-el. I take this oportunity to inform you that throuh the kind dealing of God to us we are all in good health, and should rejoice to know that you enjoy the same blessing. But according to my purpose which I named to you in my letter of the 18 of August, I left Mansfield and knowing of no other way but to seek the charity of the people in pursuing my journey, you will readily conclude that I had some hard struggles in my mind concerning the undertaking, but I still felt it my duty to make the trial. When I started from Mansfield I had by the help of friends about 18 dolars in money and 13 dolars in shoes and I concluded by the advice of my friends to go through the large towns and citys for the sake of finding favors but I found it a hard subject to introduce among strangers. I went through Providence but knowing that town had suffered much by the tempest last, fall. I thought It not proper to ask anything of them. At Hartford I found some small favours. When I came to Newhaven my money was nearly gone and my shoes were in poor demand. I had need of no beter asistance. We was all favoured with good health on our journey but Phebe and our 2 youngest children who were for some time troubled with bad colds we had remarkable fine weather so that we lost but half a day by rain from Dedham through the journey. When I got to Meadville I found a house provided Mr. Shaddok Captin Pecks partner who is also land agent who was Informed of me by letter before I arrived. I have agreed with Mr Shaddok to have but acres of land at the same price per acre that they sell acre lots, after spending several days in search of land I have selected my land about 8 miles east of Meadville the nearest boat navigation we have, which is on french creek a branch of the Allegany between 40 and 41 degrees of north latitude we are less than 30 miles from the state of Ohio on the west and about from Rutland by water but not so far by land. I have moved from Meadville within 2 miles of my work. I have part of my timber cut for my house and hope to have it raised and covered in 10 days. Shaddok has helped me to a little furniture and a cow and has agreed to find me in provision another year and wait til I can raise enough to pay him and support my family. I do not consider this country quite so good as I hoped to find but I think it is well worth leaving Penobscot for. I received your letter dated December in 15 days from Bangor and was very glad to know that you were so well restored to health after a severe sickness you were surprised no doubt to know that I had bought land in Pensylvania and now you will wonder at my being here. Shaddock went to Newhaven last fawl and failed to provide for me acording to the contract by which I found great difficulty in getting through the winter beyond what I ever found before through that and other discouragements I formed a resignation to start anew for Ohio for which reason I have neglected to write you til now. I expected to have been here in April.

3: Mercy plea last resort for year-old murder convict

The surname Skinner is an English trade and business name of approximately the twelfth century when trade names like Brewer, Baker, Chandler and Smith came into existence as family names.

HARWICH - Dorothy 'Dot' Skinner (nee MacRae), 78, formerly of East Hartford, CT and Harwich, MA, passed away peacefully at home on Sunday July 22nd surrounded by her loving family.

Thanks to William Weiler for transcription of this article. In this sketch I shall make no assertion of facts unless I have the evidence to prove them; and suggestions or beliefs will be given as such. Their first settlement was Elizabethtown now Elizabeth, N. I have a copy of the record of their marriage. Soon after their marriage they removed to Woodbridge, N. They were evidently the grandparents of the first, or older, Rev. Nathaniel SKINNER, although I have not been able to obtain positive proof of that fact; but the circumstantial evidence is sufficient to establish the fact beyond doubt. The tombstone of the first Rev. This shows that he was born He settled on a farm near where he is buried about , as his name appears on the first tax lists of Turkeyfoot tp. This church is still in existence, and the records are well kept and preserved. This shows that he was born in We do not know her maiden name. This Nathaniel, son of Reuben, was born about , and died in Belmont Co. Sept 13, , m. Nathaniel SKINNER by his first wife, as by that way I follow my own line of descent, which will enable anyone whom this will be sent to trace the line of relationship, as their immediate ancestors are given above. Their moving time was winter, and they traveled in a sled. Robert died in Somerset Co. My father, William H. My father died May 10, I was born Nov. I show by this that I am descended from 1st Rev. Nathaniel SKINNER on both sides, I have almost a complete genealogy of the descendants of his sons Robert and Reuben, and expect to complete it and have it printed in the near future, if enough of the family want to pay the expense of printing.
