

THE STRAND MAGAZINE: AN ILLUSTRATED MONTHLY, VOL. VI: JULY TO DECEMBER 1893 pdf

1: Frank Leslie's Weekly

*The Strand Magazine: an illustrated monthly, www.enganchecubano.com, July to December [Geo (ed) NEWNES] on www.enganchecubano.com *FREE* shipping on qualifying offers. First publication of 4 Sherlock Holmes stories by Arthur Conan Doyle.*

Introduction Conan Doyle, a writer of unusual literary talent, created Sherlock Holmes, the greatest fictional detective personality of all time. Doyle was also an avid sportsman. He boxed, swam, played golf, cricket and hockey. When he moved to Switzerland in , he took up skiing. In the late Nineteenth Century, the numbers of skiers in the Switzerland could have been counted on one hand. He had skis shipped to him from Norway and started teaching himself. Eventually, he teamed up with two brothers the "Brangers brothers" described in his article, below. The brothers had done a backcountry ski trip over a pass in the Alps, and Conan was hot to have a go at it himself. Captions of illustrations are the same as the original Stand article THERE is nothing peculiarly malignant in the appearance of a pair of "ski. No one to look at them would guess at the possibilities which lurk in them. But you put them on, and you turn with a smile to see whether your friends are looking at you, and then the next moment you are boring your head madly into a snow-bank, and kicking frantically with both feet, and half rising only to butt viciously into that snow-bank again, and your friends are getting more entertainment than they had ever thought you capable of giving. This is when you are beginning. You naturally expect trouble then, and you are not likely to be disappointed. But as you get on a little the thing becomes more irritating. The " ski " are the most capricious things upon earth. One day you cannot go wrong with them. On another, with the same weather and the same snow, you cannot go right. And it is when you least expect it that things begin to happen. You stand on the crown of a slope and you adjust your body for a rapid slide, but your " ski" stick motionless, and over you go upon your face. Or you stand upon a plateau which seems to you to be as level as a billiardtable, and in an instant, without cause or warning, away they shoot, and you are left behind staring at the sky. For a man who suffers from too much dignity, a course of Norwegian snow-shoes would have a fine moral effect. Whenever you brace yourself for a fall it never comes off. Whenever you think yourself absolutely secure it is all over with you. You come to a hard ice slope at an angle of 7Sdeg. But nothing ever happens, and you reach the top in safety. Then you stop upon the level to congratulate your companion, and you have just time to say, "What a lovely view is this! Or, again, you may have had a long outing without any misfortune at all, and as you shuffle back along the road, you stop for an instant to tell a group in the hotel veranda how well you are getting on. Something happensâ€”and they suddenly find that their congratulations are addressed to the soles of your "ski. But all this is in the early stage of " ski " ing. You have to shuffle along the level, to zig-zag or move crab fashion up the hills, to slide down without losing your balance, and, above all, to turn with facility. The first time you try to turn, your friends think it is part of your fun. The great "ski " flapping in the air has the queerest appearance, like an exaggerated nigger dance. But this sudden which round is really the most necessary of accomplishments, for only so can one turn upon the mountain side without slipping down. But granted that a man has perseverance, and a month to spare in which to conquer all these early difficulties, he will then find that "ski "-ing opens up a field of sport for him which is, I think, unique. This is not appreciated yet, but I am convinced that the time will come when hundreds of Englishmen will come to Switzerland for the "ski "-ing season, in March and April. I believe that I may claim to be the first save only two Switzers to do any mountain work though on a modest enough scale on snow-shoes, but I am certain that I will not by many a thousand be the last. The fact is that it is easier to climb an ordinary peak or to make a journey over the higher passes in winter than in summer, if the weather is only set fair. In summer you have to climb down as well as climb up, and the one is as tiring as the other. In winter your trouble is halved, as most of your descent is a mere slide. If the snow is tolerably firm, it is much easier also to zig-zag up it on "ski " than to clamber over boulders under a hot summer sun. The temperature, too, is more favourable for exertion in winter, for nothing could be more delightful than the crisp,

pure air on the mountains, though glasses are, of course, necessary to protect the eyes from the snow glare. Our project was to make our way from Davos to Arosa over the Furka Pass, which is over 9,000 ft. The distance is not more than from twelve to fourteen miles as the crow flies, but it has only once been done in winter. Last year the two brothers Branger made their way across on "ski." They are both men of considerable endurance, and even a long spell of my German did not appear to exhaust them. We were up before four in the morning, and had started at half-past for the village of Frauenkirch, where we were to commence our ascent. A great pale moon was shining in a violet sky, with such stars as can only be seen in the tropics or the higher Alps. We carried our "ski" over our shoulders and our "ski" boots slung round our necks, for it was good walking where the snow was hard, and it was sure to be hard wherever the sun had struck it during the day. Here and there in a hollow we floundered into and out of a soft drift up to our waists, but on the whole it was easy going, and as much of our way lay through fir woods, it would have been difficult to "ski." The snow being still hard enough upon the slopes to give us a good grip for our feet, we pushed rapidly on over rolling snow-fields with a general upward tendency. About half-past seven the sun cleared the peaks behind us, and the glare upon the great expanse of virgin snow became very dazzling. We worked our way down a long slope and then, coming to the corresponding hill-side with a northern outlook, we found the snow as soft as powder and so deep that we could touch no bottom with our poles. Here, then, we took to our snow-shoes, and zigzagged up over the long, white haunch of the mountain, pausing at the top for a rest. They are useful things, the "ski," for, finding that the snow was again hard enough to bear us, we soon converted ours into a very comfortable bench, from which we enjoyed the view of a whole panorama of mountains, the names of which my readers will be relieved to hear I have completely forgotten. The snow was rapidly softening now under the glare of the sun, and without our shoes all progress would have been impossible. We were making our way along the steep side of a valley, with the mouth of the Furka Pass fairly in front of us. The snow fell away here at an angle of from 30 deg. My two more experienced companions walked below me for the half mile or so of danger, but soon we found ourselves on a more reasonable slope, where one might fall with impunity. And now came the real sport of snow-shoeing. Hitherto we had walked as fast as boots would do over ground where no boots could pass. But now we had a pleasure which boots can never give. For a third of a mile we shot along over gently dipping curves, skimming down into the valley without a motion of our feet. In that great untrodden waste, with snow-fields bounding our vision on every side and no marks of life save the track of chamois and of foxes, it was glorious to whizz along in this easy fashion. A short zig-zag at the bottom of the slope brought us, at half-past nine, into the mouth of the pass, and we could see the little toy hotels of Arosa away down among the fir woods, thousands of feet beneath us. Again we had half a mile or so, skimming along with our poles dragging behind us. It seemed to me that the difficulty of our journey was over, and that we had only to stand on our "ski" and let them carry us to our destination. But the most awkward place was yet in front. The slope grew steeper and steeper, until it suddenly fell away into what was little short of being sheer precipice. But still, that little, when there is soft snow upon it, is all that is needed to bring out another possibility of these wonderful slips of wood. The brothers Branger agreed that the place was too difficult to attempt with the "ski" upon our feet. To me it seemed as if a parachute was the only instrument for which we had any use, but I did as I saw my companions do. They undid their "ski," lashed the straps together, and turned them into a rather clumsy toboggan. Sitting on these, with our heels dug into the snow, and our sticks pressed hard down behind us, we began to move down the precipitous face of the pass. I think that both my comrades came to grief over it. But my own troubles were so pressing that I had no time to think of them. I tried to keep the pace within moderate bounds by pressing on the stick, which had the effect of turning the sledge sideways, so that one skidded down the slope. It might have been an awkward accident in the upper fields, where the drifts are 20 ft. But the steepness of the place was an advantage now, for the snow could not accumulate to any very great extent upon it. I made my way down in my own fashion. My tailor tells me that Harris tweed cannot wear out. This is a mere theory, and will not stand a thorough scientific test. He will find samples of his wares on view from the Furka Pass to Arosa, and for the remainder of the day I was happiest when nearest the wall.

THE STRAND MAGAZINE: AN ILLUSTRATED MONTHLY, VOL. VI: JULY TO DECEMBER 1893 pdf

However, save that one of the Brangers sprained his ankle badly in the descent, all went well with us, and we entered Arosa at halfpast eleven, having taken exactly seven hours over our journey. The residents at Arosa, who knew that we were coming, had calculated that we could not possibly get there before one, and turned out to see us descend the steep pass just about the time when we were finishing a comfortable luncheon at the Seehof. I would not grudge them any innocent amusement, but, still, I was just as glad that my own little performance was over before they assembled with their opera-glasses. One can do very well without a gallery when one is trying a new experiment on "ski. If you enjoyed this story, you would also enjoy *Never Turn Back*. [Click here for more information](#). The book is truly a classic, one reviewer calling it the "standard by which other guidebooks are judged. In the article, Doyle wrote: Felix notes that Furgga in the local dialect means "pass.

The Strand Magazine. An Illustrated Monthly. Vol VI, July - September by Newnes, George [Ed] a Book condition: Acceptable Book Description George Newnes, Ltd,

As a precocious reader, I was enthralled by these books from a quite young age. Rainy days were spent lying on the spare bed with my nose in a book of knowledge. I was captivated by reading about historical topics and events "as they happened". Some readers would have collected it as a weekly partwork between from March and February and bound these into volumes. The first 8-volume edition, already bound, was published in 1880. Later editions used the spelling "Encyclopedia" and were expanded to 10 volumes. The last edition was published in 1911. The last volume contained an alphabetical index. The sections avoided scientific terms, but included topics such as geology, biology and astronomy in sections such as: As the years passed, different editions had some changes to the sections. Being aimed at children, the books contained numerous illustrations, photographs, engravings, maps and diagrams. By 1911, it had gone through 14 editions under the imprint of The Educational Book Co and there were foreign editions in French, Italian, Spanish and Chinese. The motorcar is a rarity as can be seen in a section about the rules of the road where horse-drawn carts are depicted. Later editions recognise that many boys are fascinated by steam trains. A menagerie race where the pets include a tame fox cub, geese, cats and dogs is a pleasant outdoor diversion. Later editions also have to tackle the world wars which were fought against "evil men" while sections about where fur coats come from are lost. My sets reflect the major revisions: It also has pages missing which I can now repair by scanning the corresponding pages of my new set. Unlike the encyclopedias, the volumes are organised by subject. Most volumes have a core theme, although Vol 7 appears to be a mixture of items that overflowed from Vols 1 - 6. The titles of the volumes are: 1. Immortal Heroes of the World: Some of the greatest people who have ever lived 2. Nature in All Her Glory: The book of the changing year 3. The Motherland and the Empire: Round the world with the flag 4. The Realms of Gold: Books, pictures, and beautiful rare things 5. Questions, answers, and explanations 6. The Panorama of the World: Five hundred tales and fables 8. Our World and the Others: The age-old story of earth and sky and sea 9. One thousand cheerful things The Amazing Animal Kingdom: Wild life and its adventures The Great Poetry Book: Nine hundred poems of the world The Fireside Lesson Book: His father, Henry, was a Baptist artisan and political radical. Mee started work at 14, reading copy to the proof-reader on the local paper. By the age of 20 he edited the evening edition. At age 21, he was the literary editor of the Daily Mail in London, where he expounded the patriotic, moral, temperance-driven views of his Baptist upbringing in 6 lengthy columns weekly. He also edited a picture magazine and worked on two political biographies. He died on 27 May 1896. Mee had a childlike wonder and curiosity about everything and was optimistic and enthusiastic. This was reflected in his accessible writing style and popularity with young readers. The structure of the encyclopedia encouraged its readers to explore many topics. It reflects the attitudes of its time i. English and Christian superiority, but the books contain stories and information from around the world and also evolution. His sections on great deeds were progressive in including women as well as men. Despite this, Mee had no particular affinity for children and he had only one child. These were volume sets arranged as alphabetical encyclopedias. They can be quite hard to date as the books themselves lack a publication date, though there are some clues in articles about historical events such as The Great War. I have 3 different editions. They also turn up for free in book exchange shops. John Hammerton was the editor of the first volume, but died a couple of weeks after it was completed. The New Universal Encyclopedia was revised by Gordon Stowell in 1908 and bound in 15 volumes; it was reprinted in 1911. For those on a tighter budget, there was the "Concise Universal Encyclopedia". In the 1920s, this was a single 1, page volume. The 1930s edition was expanded to 10 pages. My set is inherited from my father who got it when he was a lad. Some of the delights include artists impressions of the volcanoes on the moon which we now know to be craters and the mountains of Mercury. At the back of each volume is a colour fold out model or colour plate e. My set is admittedly a bit tatty, but is still

THE STRAND MAGAZINE: AN ILLUSTRATED MONTHLY, VOL. VI: JULY TO DECEMBER 1893 pdf

a fascinating read. The covers are tatty but present on most issues, including the advert for binding options. They had been sitting on damp grass and have been slowly dried out at room temperature. These will be bound in magazine binders to preserve the covers as well as the content. They could be bound in a single large volume in brown rexine leather-look for 6s 3d, or as two volumes in blue boards for 3s 6d each. The latter worked out 6d more expensive in total, but spread the cost into 2 instalments over the year. Should I pick up a bound volume at a boot fair, it would be easy to replicate the missing issues. Charles Ray was a prolific editor of encyclopedic works, mainly for children, especially during the s. Ray retired in aged 65, and he died in Cromer, Norfolk in Other works he edited, all published by the Amalgamated Press in London, include: The World of Wonder. I have the 7-volume edition printed between and the first edition was - The covers cloth on board are in poor repair from being stored in a damp place, but the pages are intact except for a couple of fold-outs. It covers all manner of topics for self-improvement and education - history, geography, art, music, engineering, nature and general sciences. The could then be bound into volumes by the subscriber. Each volume contains standard groups such as: Some articles are textbook-like, while others use more creative language, and even humour, to get the information across. There were phonetic language lessons and diagrams explaining electronics, engineering, motor engines and even the principles of powered flight. Later editions may be titled "The New Self-Educator" on the title page. I had to address some mould damage on the covers, but luckily the contents were intact. By coincidence, I found vols 6, 7 and 8 of the - edition, in excellent condition and a nicer binding, in a book exchange shop a few days later. I could have had these for free, but I made a donation to the shop. Harmsworth Popular Science Harmsworth Popular Science was magazine published fortnightly in the early s and completed about It built into a 7 volume encyclopaedic series of science and technology articles. The bound volumes may have contained edited or revised versions of the original magazine articles. Other sets were bound into volumes by the subscriber. Though written and edited in the waning days of the British Empire, it was humanist and modernist in tone. Topics fashionable and progressive at that time included eugenics which did not then have the negative connotations it now has and free market economics. Britain especially the industrial midlands was considered by Britons to be "the workshop of the world" hence Harmsworth Popular Science celebrated British technical and cultural innovations and innovators, such as Charles Darwin to Guglielmo Marconi. Eugenics would later be perverted and discredited by Nazi Human breeding programs, but Group 12 "Eugenics" was full of optimism for the future of mankind. Group 10 "Commerce" reflects the insular nature of Britain at that time. There were several scientific editors and contributors for the different topics covered. T Thorn Baker, Electrical expert. Lecturer at the Royal Institution. Harmsworth Magazine I only have the first 4 bound volumes of this educational magazine which began publication in

For its first thirty-six years its full title was *The Gentlewoman: An Illustrated Weekly Journal for Gentlewomen*. History[edit] Publishing its first issue on 12 July , [1] *The Gentlewoman* soon established a reputation for good writing. On 15 December *The Times* reported that its Christmas number had Pask, and the beginning of a novel, produced under exceptional conditions, " *The Fate of Fenella* ". Hornung , later famous as the creator of *A. Raffles* , as an assistant editor. Wood, founded the Society of Women Journalists. What a Parent Should Know, by "Dominie". Warden were reported to be the proprietors of *The Gentlewoman*, [12] and in preference shares in the paper were listed on the London Stock Exchange. *The Gentlewoman* had offered two hundred guineas in prizes, and the judges were H. Robinson , Viscount Maitland , and the Rev. When he replied that it was because "it took a man to manage her", they proved him wrong by both taking a turn at the wheel. They later reported the journey to have been like "tobogganing or riding on a switchback railway". Its high tone and artistic and literary excellence have made it a popular weekly newspaper. Crosland was a regular contributor. Wood replied from his office in the Strand that her name had indeed been left out intentionally, because of her own stated contempt for the press and for the snobbery of those wishing to appear in the "news puffs" of society events. Both letters were published in full in the next issue of the paper. The last issue was dated 7 August Select list at bl. *A Mystery* , p. *The Photomechanics of Printed Illustration* , p. *Queen of Victorian Bestsellers* , p. Retrieved 8 October

The Strand Magazine, an Illustrated Monthly - Vol. IV - July to December Newnes, George (editor) Conan Doyle, Arthur et al Book Description: Newnes, London,

Founded in and continued until , it was an American illustrated literary and news publication, and one of several started by publisher and illustrator Frank Leslie. Foster was the first editor of the Weekly, which came out on Tuesdays. While only 30 copies of the first edition were printed, by its circulation had grown to an estimated 65, copies. They followed a tested and proven formula of carefully combining elements of war, politics, art, science, travel and exploration, literature and the fine arts in each issue, enhanced with between 16 and 32 illustrations. It also gave extensive coverage to less martial events such as the Klondike gold rush of , the laying of the Atlantic Cable and the San Francisco earthquake. Irving Hancock, Helen R. Martin and Ellis Parker Butler. Several notable illustrators worked for the publication, including Albert Berghaus and Norman Rockwell, who created covers for the magazine in its latter years. Frank Leslie Frank Leslie was an English-born American engraver, illustrator and publisher of family periodicals. He was born March 29, in Ipswich, England and though trained for commerce embarked on a career as an illustrator, creating his first wood engraving of the coat of arms of his home town at age thirteen. The sketches he submitted to the Illustrated London News were so well-received that, at age 20, he was made superintendent of engraving for that journal. He soon became an expert and an inventor in his new work. It was here that he learned the operation known as overlaying "the system of regulating light and shade effects" in pictorial printing, a system which he was the first to introduce to the United States. He was first married in England, and had three sons with his first wife before they separated in . In , he arrived in New York City to engrave woodcuts for P. Their summer home was in Saratoga Springs, New York, where they entertained many notables. In they undertook a lavish train trip from New York to San Francisco in the company of many friends. Miriam Leslie took the business in hand and put it on a paying basis, even going so far as to having her name legally changed to Frank Leslie in June. She also was a notable feminist and author in her own right. Individuals with personal subscriptions must login at accessible.
