3: Three Keys to Sustaining Family Wealth | BNY Mellon Wealth Management

The Sustaining Corporation Name Date Course Human sustainability It is not possible for organizations to achieve sustainable practices without human sustainability.

Parents often find it difficult to discuss their wealth “ and what will happen to it when they die ” with their children. For many families, discussing death is considered to be a bad omen. For others, there may be a concern that being too transparent about family finances could lead to conflict and result in strained family relationships. Whatever the reason, the end result of failing to openly communicate about family wealth tends to be the same: So what can be done to avoid these unfortunate outcomes? We have observed three key steps that every family can take to successfully transfer their wealth from generation to generation. Open the Lines of Communication Early Open communication and the trust that it builds are the basis for sustaining family wealth. It may also be wise to enlist the aid of a wealth expert from outside the family to help facilitate productive communication. They can lead the family through communications exercises aimed at helping each member identify their personal communication style, as well as the preferred styles of the rest of the family. This can give family members the ability to participate with confidence and to understand how best to interact with one another. An outside coach may also facilitate exercises that help families discover shared values and develop a family vision or mission. These shared passions form the basis for joint activities in areas ranging from family philanthropy to family venture capital initiatives, allowing multiple generations to work side by side and share in decision-making. Such points of agreement are the building blocks for strong family bonds that will be critical in keeping the family together during tough times, like when a family member passes away. Andrew Carnegie, the famous American industrialist, is often credited with popularizing a proverb that speaks to the challenges of maintaining familial wealth: Indeed, we often encounter families in which the beneficiaries are unable to properly manage the wealth they have inherited. Older family members who insist on making the bulk of the decisions themselves and who keep younger family members out of the loop may be setting the stage for future dysfunction. In these cases, it should come as no surprise that younger family members, as trust beneficiaries with little understanding of how the wealth has been managed and no experience in managing it, may lack both the skills and the self-worth to live happy and productive lives. The sad saga of the Vanderbilt family illustrates this phenomenon. Though William Henry was a good steward of the wealth, he retained full control of it. His siblings, children and other relatives, who were beneficiaries of the ample family trusts, had no insight into how the wealth was managed and no say in key financial decisions. The money ultimately was viewed not as an asset, but as a burden. An outside perspective can be useful, providing the family with independent, objective and impartial advice, free of the emotion or sentiment that family members might bring with them into financial discussions. If the family wishes to retain some input, they can include a family member as a co-trustee “ although, legal and tax considerations usually limit the authority of family members over distributions from a trust. For estates that contain intangible assets that are hard to value, such as music and movie rights, royalty interests and memorabilia, the corporate trustee, as a disinterested party, can help protect the beneficiaries over the long term. Emotional attachments to certain items can lead to rifts among family members and even litigation. Furthermore, underestimating the value may have disastrous consequences for the overall estate plan. As a result, a large charitable trust was never able to be funded. The Value of Planning Consider this scenario: The Smith parents retain full ownership of their wealth, which means that all income generated during their lives is taxed at their high personal income tax rate. The Hamilton parents, however, have enlisted a professional advisor to create a plan that would enable them to transfer their wealth to their children in the future. They employ three common estate planning techniques: It is important to note that this example illustrates just one of countless combinations of vehicles that a family could use. Income in excess of the required annuity payment was accumulated and modeled separately as liquid investments in a Diversified Growth with Income strategy. Some Crown corporations are expected to be profitable organisations, while others are non-commercial and rely entirely on public funds to operate. One with agent status is entitled to the same constitutional prerogatives, privileges, and immunities held by the Crown and can bind the Crown by its acts. The Crown is thus entirely responsible for the actions of these organisations. The Crown is not liable for Crown corporations with non-agent status, except for actions of that corporation carried out on instruction from the government, though there may be "moral obligations" on the part of the Crown in other circumstances. These companies were established by a royal charter by the Scottish, English, or French crown, but were owned by private investors. They fulfilled the dual roles of promoting government policy abroad and making a return for shareholders. Certain companies were mainly trading businesses, by some were given a mandate by royal charter to govern a specific territory called a charter colony, and the head of this colony, called a proprietary governor, was both a business manager and the governing authority in the area. The first colonies on the island of Newfoundland were founded in this manner, between and The HBC thus often being the point of first contact between the colonial government and First Nations. The first major Canadian experience with directly state-owned enterprises came during the early growth of the railways. During the earlier part of the century, many British North American colonies that now comprise the Canadian federation had Crown corporations, often in the form of railways, such as the Nova Scotia Railway, since there was limited private capital available for such endeavours. When four British colonies joined to create the Canadian federation in 1867, these railways were transferred to the new central government. As well, the construction of the Intercolonial Railway between them was one of the terms of the new constitution. The first section of this entirely government-owned railway was completed in 1871. By the early twentieth century, however, many of these had become bankrupt. The federal government nationalized several failing Western railways and combined them with its existing Intercolonial and other line in the East to create Canadian National Railways CNR in 1918 as a transcontinental system. The CNR was unique in that it was a conglomerate, and besides passenger and freight rail, it had inherited major business interests in shipping, hotels, and telegraphy and was able to create new lines of business in broadcasting and air travel. Many of the components of this business empire were later spun off into new Crown corporations including some of the most important businesses in the mid-twentieth century economy of Canada, such as Air Canada, the Canadian Broadcasting Corporation CBC, Via Rail, and Marine Atlantic. Provincial Crown corporations also re-emerged in the early twentieth century, most notably in the selling of alcohol. Government monopoly liquor stores were seen as a compromise between the recently ended era of Prohibition in Canada and the excesses of the previous open market which had led to calls for prohibition in the first place. Virtually all the provinces used this system at one point. Resource and utility companies also emerged at this time, notably Ontario Hydro in 1913, Alberta Government Telephones in 1914, and SaskTel in 1915. Provincial governments also re-entered the railway business as in Northern Alberta Railways in 1912 and what later became BC Rail in 1913. New crown Corporations were also created throughout much of the mid-century. A government-owned bank, Business Development Bank of Canada was created in 1959. Not only the federal government was involved, but also the provinces, who were engaged in an era of "province building" expanding the reach and importance of the provincial governments around this time. It is widely seen as a symbol of modern Quebec, helping to create the Quiet Revolution of the 1960s where French-speakers in Quebec rose to positions of influence in the industrial economy for the first time, and Quebec nationalism emerged as a political force. Other areas provinces were active in included insurance Saskatchewan Government Insurance, The heyday of Crown corporations ended in the late 1970s, and there has been much privatization since that time, particularly at the federal level. Air Canada was privatized in 1989 and CN in 1995. List of Canadian Crown
