1: The Tree Care Primer - Brooklyn Botanic Garden

*The Tree Care Primer (Brooklyn Botanic Garden All-Region Guide) [Christopher Roddick, Beth Hanson] on www.enganchecubano.com *FREE* shipping on qualifying offers. Beyond bark, branches, and leaves, what do you see when you look at your trees?*

But there are also plenty of hidden gems that deserve to be called out for their resilience and beauty. Experimenting with plants is one of the most exciting parts of working at a botanic garden, after all. Many of these trees are still growing today. Other specimens may have predated the Garden, and some have just gotten lost in the shuffle. Here are a few of my favorite lesser-known trees at BBG. Stand back on the lawn and look at it from a distance to appreciate its elegant form. The multiple trunks form an almost perfect vase shape. The color progresses in bands from yellow to orange, then to pink and red. Since the leaves are heart shaped, this creates a rainbow of hearts in autumn. The leaves also have a really pleasant, sweet fragrance in the fall, like brown sugar or cotton candy. Hackberry Tree *Celtis occidentalis* Fragrance Garden This native species is actually considered a weed tree by many gardeners. It can grow in really harsh environments, and you might find one growing out of a crack in the concrete. But this mature specimen proves what an amazing tree it can become, given the chance to thrive in the right place. Sourwood *Oxydendrum arboretum* Daffodil Hill Sourwoods are not native quite this far north, but this one is thriving here. Sourwood honey is thought to be one of the best-tasting, sweetest honeys. Its leaves turn a brilliant red in the fall, and the seedpods hang from the ends of the branches like fingers waving at you. The seedpods persist after the leaves drop, which appropriately enough tends to happen right around Halloween, though as temperatures have been warming, the leaves tend to stay on into early November. One of the nicest perspectives for seeing it is from the path just across the pond. Look for a foot-tall, straight-trunked, pyramid-shaped tree with blue-tinted foliage. They smell kind of like cedar. This is also a great tree for birds to nest in—the sharp needles keep predators out. Cardinals, robins, and other year-round residents often take advantage of this feature. Japanese *Stewartia pseudocamellia* Osborne Garden Walk along the path just above the stone wall on the east side of the Osborne Garden to see this beautiful small tree. It has something interesting going on year-round. *Stewartias* are related to camellias, and in the summertime, they produce similar white flowers, which attract a lot of bumble bees. It also has fantastic fall color. It also has a really distinctive trunk and branches with multicolored, exfoliating bark that has flakes of yellow and red with green cortex visible beneath. It was planted in but has only grown to 35 feet tall.
