*If Mises has an unheralded masterpiece, *The Ultimate Foundation of Economic Science* is it. There are two senses in which this book is indeed ultimate: it deals with the very core of economics as a science, and it is the last book that he wrote. If you have never read this book, you will be struck by.*

There are two senses in which this book is indeed ultimate: If you have never read this book, you will be struck by the fiery and determine prose and the weightiness of the subject matter. The content reflects a lifetime of learning and his desire to make one last impassioned statement to save both economics and liberty from sure destruction at the hands of intellectual error. As his career was coming to a close, Mises saw that that fiercest battles over economic questions come down to issues of epistemology: How do we even know that economics is a valid science? What are the methods we should use in studying economics? What constitutes a true proposition and how do we know? These questions matter because, as Mises says, the very future of freedom and civilization itself depend on economic science, the development and application of which was "the most spectacular event of modern history. Mises here battles both, first by showing how the two are related, and, second, by demolishing the basis of both. He shows that humans cannot be studied in the same way that we study the physical world. We are dealing with volitional beings whose choices make controlled experiments completely impossible. And yet does that imply that a kind of chaos exists in economic theory, that we must throw up our hands and do nothing observe that all is in flux? Not at all, says Mises. There is a logical structure of the human mind that manifests itself in economic reality through strict laws of cause and effect. To understand economics is to see these laws as universal and inviolable. To provide a flavor, here is Mises on the existence of causality: No thinking and no acting would be possible to man if the universe were chaotic, i. In such a world of unlimited contingency nothing could be perceived but ceaseless kaleidoscopic change. There would be no possibility for man to expect anything. All experience would be merely historical, the record of what has happened in the past. No inference from past events to what might happen in the future would be permissible. Therefore man could not act. He could at best be a passive spectator and would not be able to make any arrangements for the future, be it only for the future of the impending instant. The first and basic achievement of thinking is the awareness of constant relations among the external phenomena that affect our senses. A bundle of events that are regularly related in a definite way to other events is called a specific thing and as such distinguished from other specific thingsâ€. Whatever philosophers may say about causality, the fact remains that no action could be performed by men not guided by it. Neither can we imagine a mind not aware of the nexus of cause and effect. In this sense we may speak of causality as a category or an a priori of thinking and acting. This proposition cuts through the nonsense of Marxism which postulated without evidence the existence of historical laws , Keynesianism the economic laws of which were arbitrary , and positivism which erred in importing methods from an unrelated field of study. That only scratches the surface of the extent of the ideologies confronted here. He also confronts those who claim the existence of "statistical laws," the advocates of primitivism, the apostles of polylogism, and pushers of panphysicalism, and the demagogues of determinism. Above all, he elevates the Misesian idea of praxeologyâ€the science of actionâ€as the starting point for all economic theory and historical understanding. Of all the books in the Misesian library, this book is probably the most neglected. He wrote it as a final defense of his theoretical work, and the reader is struck by the extent to which Mises complete that intellectual revolution that began in Austrian in the s, when Carl Menger rediscovered the foundation of economic science in the understanding of acting, choosing human beings. No less remarkable is the fact that the most bigoted advocates of such a system of conformity call themselves scientists, logicians, and philosophers.

Written toward the end of Mises's life, his last monograph, The Ultimate Foundation of Economic Science, returned to economics as a science based on human action.

Overview[edit] Critical theory German: Critical Theory is a social theory oriented toward critiquing and changing society as a whole, in contrast to traditional theory oriented only to understanding or explaining it. Horkheimer wanted to distinguish critical theory as a radical, emancipatory form of Marxian theory, critiquing both the model of science put forward by logical positivism and what he and his colleagues saw as the covert positivism and authoritarianism of orthodox Marxism and Communism. He described a theory as critical insofar as it seeks "to liberate human beings from the circumstances that enslave them". That critical social theory should be directed at the totality of society in its historical specificity i. Kant, by contrast, pushed the employment of a priori metaphysical claims as requisite, for if anything is to be said to be knowable, it would have to be established upon abstractions distinct from perceivable phenomena. Marx explicitly developed the notion of critique into the critique of ideology and linked it with the practice of social revolution, as stated in the famous 11th of his Theses on Feuerbach: The market as an "unconscious" mechanism for the distribution of goods and private property had been replaced by centralized planning and socialized ownership of the means of production. Habermas is now influencing the philosophy of law in many countriesâ€”for example the creation of the social philosophy of law in Brazil, and his theory also has the potential to make the discourse of law one important institution of the modern world as a heritage of the Enlightenment. Habermas dissolved further the elements of critical theory derived from Hegelian German Idealism , although his thought remains broadly Marxist in its epistemological approach. Perhaps his two most influential ideas are the concepts of the public sphere and communicative action ; the latter arriving partly as a reaction to new post-structural or so-called " postmodern " challenges to the discourse of modernity. Habermas engaged in regular correspondence with Richard Rorty and a strong sense of philosophical pragmatism may be felt in his theory; thought which frequently traverses the boundaries between sociology and philosophy. Critical theory and academic fields[edit] Postmodern critical social theory[edit] While modernist critical theory as described above concerns itself with "forms of authority and injustice that accompanied the evolution of industrial and corporate capitalism as a political-economic system", postmodern critical theory politicizes social problems "by situating them in historical and cultural contexts, to implicate themselves in the process of collecting and analyzing data, and to relativize their findings". As a result, the focus of research is centered on local manifestations, rather than broad generalizations. In these accounts, the embodied, collaborative, dialogic, and improvisational aspects of qualitative research are clarified". Michel Foucault is one of these authors. From the s and s onward, language, symbolism, text, and meaning came to be seen as the theoretical foundation for the humanities , through the influence of Ludwig Wittgenstein , Ferdinand de Saussure , George Herbert Mead , Noam Chomsky , Hans-Georg Gadamer , Roland Barthes , Jacques Derrida and other thinkers in linguistic and analytic philosophy, structural linguistics , symbolic interactionism , hermeneutics , semiology , linguistically oriented psychoanalysis Jacques Lacan , Alfred Lorenzer , and deconstruction. They consider his best-known work, Pedagogy of the Oppressed , a seminal text in what is now known as the philosophy and social movement of critical pedagogy. For a history of the emergence of critical theory in the field of education, see Isaac Gottesman , The Critical Turn in Education: Criticism[edit] While critical theorists have been frequently defined as Marxist intellectuals, [20] their tendency to denounce some Marxist concepts and to combine Marxian analysis with other sociological and philosophical traditions has resulted in accusations of revisionism by classical , orthodox , and analytical Marxists, and by Marxistâ€”Leninist philosophers. Martin Jay has stated that the first generation of critical theory is best understood as not promoting a specific philosophical agenda or a specific ideology , but as "a gadfly of other systems".
