Or, get it for Kobo Super Points! See if you have enough points for this item. A commentary on the unseen spiritual warfare around us. This narrative is entirely new and unique in that it takes historical events and scientific information and links them together in a way never done before. In fact, it pieces together events that could not have been done until now due to significant linking events occurring in only the last couple of years. This book does not seek to set dates for the end of the world, but it does seem likely we are at the threshold of the end of time as we know it. You will not be bored when the big picture comes into view. Who will render to every man according to his works. Not of works, that no man glory. For we are HIS workmanship, created in Christ Jesus in good works, which God hath prepared that we should walk in them. Works do not gain us salvation, but as followers of Christ we are expected to take up His work, being good stewards and representatives. War in Heaven, War on Earth," written by Cris Cannon, is an intriguing submission which provides the reader with the authors perspectives and views pertaining to the fate of mankind relative to the basic teachings of Christianity. In alternately instructive and passionate prose, Mr. Cannon conveys with enormous conviction his staunch belief that each day the sun is setting for each and every one of us while stressing the vital nature of embracing and adhering to the word of God by accepting Jesus Christ as our savior. Effectively supporting his theories by citing myriad biblical scriptures, the author demonstrates an ability to connect with those who may share his devout faith regarding the issues discussed. For readers who accept the notion of the actual existence of Satan and the evil engendered by this being, the authors views should strongly resonate. For those who possess a more skeptical or pragmatic philosophy towards Christianity, the work could prove thought provoking and may inspire spirited discussion. Often submissions of this nature portend the imminent end of the world on a specific date through an epic return of Jesus Christ. This work instead takes a much more intellectual approach in terms of reviewing the history and behavior of mankind and what the consequences of the paths most choose for their lives will ultimately deliver in eternity. Presented strictly as a narrative, the text flows at a brisk tempo that should maintain the readers interest throughout. Although works of this genre generally are not effective in converting those of a different religious view, this work could be regarded as inte Buy the eBook.

Turkey is leading emerging markets to the downside, but the declines are broad-based. The Federal Reserve is going to continue contracting liquidity which will pressure Emerging Market currencies and stock markets. Emerging Markets have more downside; there is still more time to wait before buying this sector. Is It Time Yet? On June 19th, almost five months ago, I penned an article titled " Sector Study: Contracting global liquidity, a rising U. The biggest pushback I received on the short EM stance was that the dollar would weaken, causing an EM rally and that on a valuation basis, EM markets were cheap. While these are valid criticisms, I did not think that would cause the Emerging Markets to stop declining. Given the rebound in EEM, this is a great time to refresh the thesis and see if it is time to exit the position or use this bounce as an opportunity should the fundamentals continue to point lower. As an update, since the writing of the first article on June 12, EEM has fallen 5. YCharts, EPB Macro Research The position has been working and EEM has been struggling, other than a few recent days, due to the three main criteria described above, contracting global liquidity, a rising U. Each of these criteria has gotten notably worse, not better. Below I will run through each of those factors and focus most time on the global economic slowdown that started in January of South Korea EWY has been slowing rapidly and will be a significant focus of this update. South Korea is not a significant factor in the trade war, and the South Korean stock market is down There is more going on in the Emerging Markets than just a trade war with China. A material economic slowdown, which will be outlined below is causing most of the declines in equity markets. From the original thesis, which has not changed, we will take a look at contracting global liquidity due to central banks, a rising U. Contracting Global Liquidity Most major central banks around the world have engaged in aggressive monetary easing which came with many different quantitative easing programs. Each QE program started at a different time, is expected to end at different times and was executed with varying degrees of intensity. The balance sheet and easing measures of the six major central banks Fed, BoJ, ECB, BoE, SNB, Riksbank can be looked at in aggregate to determine the thrust of global central bank policy as well as flows in global liquidity. Financial Times Given the declines in local currencies and the rise in interest rates, the issuance of U. As the Federal Reserve leads the way out of the era of central bank easing, markets have had to adjust to the first real test of central bank tightening. Ironically, tightening from the Federal Reserve is felt in EM countries before it becomes worrisome domestically. This has to do with massive U. In the United States it may feel like the process of monetary tightening has gone smoothly, and to some extent, it has, barring a small amount of market turbulence, but the impact in EM countries has not been light. That change will be massive and has tremendous implications for risk assets around the world. The chart below shows early being the start of the liquidity drain on the global financial system. Central Bank Balance Sheets Declining: They are going to get worse and more severe, not better as we move into the end of and What should be noted is that we have just seen a rate of change contraction in liquidity. Liquidity has not gone negative year over year and is not expected to until early Monetary policy lags and can take up to one year to flow through to the economy and the economic data that the market responds to, including corporate profits. Real-time monetary and credit aggregates show how with just a small amount of tightening, banking liquidity has been reduced domestically in a dramatic fashion. Looking at the asset side of the U. In year-over-year terms, total bank asset growth has declined to the lowest level of this entire economic cycle at just 1. Declining assets for the U. As the Fed continues to raise interest rates and also continues to reduce their balance sheet, we can expect more liquidity contraction and thus, more declines in U. A reduction in total banking assets often means less international economic activity and things like debt issuance which was described above. FRED, Federal Reserve, EPB Macro Research In addition to bank asset growth, bank credit growth has been in free-fall in growth rate terms since the start of more aggressive monetary tightening in Bank credit growth includes all loans and all securities holdings of banks. Once the Federal Reserve ramped up the tightening, bank credit growth fell sharply down to a rate of approximately 3. Lower asset growth and sharply reduced bank credit growth show the rate of contraction in liquidity. As a reminder, the monetary base is comprised of excess reserves from the baking sector held at the Federal Reserve as well as cash in circulation. The monetary base was declining at the end of and at the start of These contractionary measures caused a near meltdown in emerging markets at the beginning of The declines in risk assets around the world were only abated by a coordinated effort from central banks around the world. As the Federal Reserve tries to contract monetary policy once again and the monetary base moves toward the lows made in , emerging markets are once again collapsing notwithstanding a small rebound in the past several days. Markets are not expected to go up or down in a straight line. If the conditions that caused the original declines persist, and are worse, more declines should be expected. The chart below left shows the monetary base in millions, and the year-over-year change in the monetary base right. While many investors will say that excess reserves are still plentiful, which is true, the rate of contraction is enough to reduce the liquidity of the U. As I wrote in the original article back in June: It is my opinion that as the liquidity contractions intensify, which they will with each passing month, global risk assets stocks will decline and the global economy will slow, led first by emerging markets, followed by Europe, China and, lastly, the United States. With lags, the impact of Fed policy, however, has a broad reach. As noted in past quarterly letters, Fed policy determines world dollar liquidity. That liquidity is palpably shrinking around the world where debt productivity is considerably lower than in the U. As such, the erosion of dollar liquidity should weaken foreign economies before the monetary restraint is visible domestically Chart 2. The symptoms can be seen in emerging markets with declining equity prices and in locations where the cheap money policy of the past has encouraged dollar borrowing. These markets are now facing rising interest costs and a more expensive dollar, making repayment difficult. Hoisington Investment Management, Federal Reserve With the Federal Reserve set to raise interest rates in December, and for now, again in March, along with a continued reduction in the balance sheet, world dollar liquidity and banking liquidity will continue to contract. It is nearly a certainty given the mechanisms of monetary tightening. Liquidity will be reduced; the argument is whether or not it will have an impact greater than what has been already felt. I would argue that further contractions in reserve aggregates, credit aggregates, and monetary aggregates and thus global liquidity, will cause more pain in EM economies, markets, and currencies. Dollar Will Continue A stronger U. Over the past two years, the U. Recently, the dollar has given back some of the gains and EM currencies have rebounded. As with equity markets, nothing goes up or down in a straight line. Is this just a bounce in a longer-term downtrend or is the rally in the U. A chart I posted in the last article, from Nordea Markets, outline the expected path of excess liquidity, overlaid with the U. The graph indicates that liquidity will not bottom in rate of change terms until at least the early part of Nordea Markets, Twitter As dollar liquidity contracts, fewer dollars are available. This supply shortage drives up the value of the dollar. With dollar liquidity expected to continue declining with the outlined pace of monetary tightening, there is no reason for the declines in EM currencies to reverse and move higher. Coupled with slowing economies, local EM currencies have more downside. Contracting Global Economy As mentioned in the introduction, much of the declines EEM are attributed to trade wars or tariffs, but there has not been much discussion around the collapsing economic data that is being seen around much of the world outside the United States. Many of the countries that are in the worst shape economically have little or nothing to do with current trade tensions. The economic weakness is simply a result of reduced global liquidity, a stronger U. As many EM economies start to contract, the value of their local currency should be expected to decline. We know from the sections above that the macro overlay is quite bearish for EM as a whole. We can now look at the individual country level to gauge the actual economic impact. Many of those countries have nothing to do with the trade war. Emerging Market Equities Are Declining: The manufacturing PMI reading dipped below 48, well into contractionary territory and the Yuan was weakening. The weakness out of China spread globally as stock markets around the world started to decline. A globally coordinated effort dubbed the "Shanghai Accord" lifted markets and revived the economy with a record stimulus coming out of China. The recovery in the Chinese economy can be seen in the chart below, with the manufacturing PMI rising for most of and through Starting at the beginning of , the acceleration subsided, and the globally synchronized recovery began to falter. An economic slowdown in China has been underway since the start of

The slowdown has contributed as much if not more to the weak stock market performance compared to the trade wars and tariffs. In the recent two months, the PMI reading rose just out of negative territory to South Korea is a manufacturing bellwether which makes their industrial declines worrisome for the health of the global economy which the United States is unlikely to stay decoupled from. South Korea is not declining due to trade wars; their economy is simply slowing. The slowdown globally is due to a contractionary monetary policy which is reducing liquidity, and a rising U. Trading Economics Furthermore in South Korea, construction output in plunging. The global recovery can be seen in the accelerating in construction output, but again, in late , the global economy rolled over. At the risk of redundancy, the global recovery can be seen in the rise from through in the PMI below. Starting in , the global economy rolled over and manufacturing PMIs, and global growth began to roll over. We are now seeing outright contractions in many EM countries.

We're headed into the middle of October, but there's still plenty of time to enter the Unsung Heroes of the Heresy contest! All you need is a single painted figure and a story, up to words in length, telling the tale of your original creation Independent Character.

From ou and po; not yet. From para and eimi; to be near, i. At hand; neuter present participle time being, or property. Note on John 2: Here, as there, He regards the events of life as marked out by divinely-ordered seasons. There is for Him a time for solemnly entering Jerusalem with a throng of pilgrims going up to a feast, and in a few months it will have come; but it has not come yet. It is at the feast of the Paschal Lamb, already set apart, and not with the joyous shouts of harvest-tide. Your time is alway ready. Of the nation, their thoughts and feelings are in sympathy with the national feasts. They can join in the festive throng keeping holiday, and take their part in the Temple service. For Him present events have another meaning. Desertion of disciples, threatenings of Jews, unbelief of brethren--all this means that the end is approaching, and that His time is at hand. Pulpit Commentary Verse 6. This language corresponds with the reply to his mother, "My hour is not yet come" to do what you blindly desire. The kind of manifestation he subsequently made on that occasion was one of love to the needy, not one of power to dazzle the world see notes, John 2: The underlying thought which the postponement suggested was that the approach of Jesus to Jerusalem with the pilgrim throng would be the signal for the final outburst of bitter hostility which he knew was smouldering in the hearts of the Sanhedrists, and would also be the torch applied to the magazine of combustible passion in which he would sacrifice his life. But your time the season which is yours is always ready. The brothers were at liberty at any time to show themselves and their works to the world. They had plans akin to those of the world. They shared the fashion of religious thought, the ideal of the Israelitish world, completely. James, for instance, Nazarite though he may have been, punctilious in traditionary ritual, and honouring the conservative passions of his order, might at any time secure the acclamations or approval of the chief powers of the world - their little world. You are so much in harmony with the world that at any time you may say all that is in your heart. If I go as you suggest, it must be as Messiah; you go as pious pilgrims to share in this national celebration. Ungodly men sometimes undertake to counsel those employed in the work of God; but they only advise what appears likely to promote present advantages. The people differed about his doctrine and miracles, while those who favoured him, dared not openly to avow their sentiments. Those who count the preachers of the gospel to be deceivers, speak out, while many who favour them, fear to get reproach by avowing regard for them.
