

1: Trying to explain Meme Generator - Imgflip

Lyrics to "Trying To Explain" song by Lateeya: We stated our relationship as friends But deep inside I always had a crush on you Talking and flirti.

Posted on October 17, By Scott Youngren In order to please my readers, I have made the bold decision to begin this essay in an utterly groundbreaking fashion—by providing a surprise bonus feature that will, at first, seem unrelated to the topic of this essay: I will now explain the mystery of the JFK assassination. The decades of waiting are finally over. Sit tight—here it goes: You were suspicious of my bold claims from the outset?! All I did was describe aspects of a gunshot and subsequent wound, in pretentious scientific terms, rather than explain the assassination? You were hoping I would explain who the guilty parties were, and what their motives were? Well, you were justified in feeling suspicious and then disappointed. As I note in *The God of the Gaps: Why God and Science Are Not Competing Explanations*, atheists commit what is known in philosophy as a category error any time they declare that science and God are competing explanations for natural phenomena. Below is an excerpt from the Wikipedia post for Category Error: This is because bananas belong to a category of things that cannot be said to have beliefs. Bo Jinn writes in *Illogical Atheism: Function and agency account for two entirely different explanations as to how and why something exists*. Aristotle explained this over two thousand years ago—Aristotle stated that everything in the universe could be understood in terms of: A formal cause, a material cause, an efficient cause and a final cause. Science accounts for only two of those causes; the formal and the material. Only the first of those categories of causes were open to the scientists in the story. Only the first two of those categories are open to science in the study of the universe. Evolution and manufacturing processes are proposed formal causes. Atheist reasoning commits a category error when it confuses different levels of causation. Further, atheist reasoning suffers an explanatory failure when it disregards the need for explaining all levels of causation. Science describes natural phenomena in terms of laws, but it does not explain where those laws came from, who or what enforces those laws, or why the universe has laws in the first place rather than just chaos. So how does theism explain the above mentioned phenomena? The answer is simple. Such laws are the result of a lawgiver God. Robert Boyle, the founder of modern chemistry, summarized the theistic explanation of why matter follows physical laws succinctly when he said: He wrote as also cited in *The God of the Gaps: Even if man proposes the axioms of the theory, the success of such a project presupposes a high degree of ordering of the objective world, and this could not be expected a priori*. Edgar Andrews writes in *Who Made God?: In the same way, the laws of nature determine what is and what is not physically possible, but they do not determine what actually occurs within the multitude of available possibilities. Why Not Just Plain Luck?* The referees see to it that these laws are obeyed but that does not predict the winner of the Super Bowl. There is not enough information in the rules of the game to make that prediction. That is why we play the game. He finds the information content amazingly small. As I mentioned in *Why Life Could Not Have Emerged Without God*, the simplest living thing the first self-replicating molecule is several orders of magnitude more complex than anything humans have ever produced—supercomputers, spacecraft, anything. Regarding the immense information content contained in the language of life the language of DNA, Nancy Pearcey writes in her book *Total Truth: Because laws describe events that are regular, repeatable, and predictable. If you drop a pencil, it will fall. If you put paper into a flame, it will burn. If you mix salt in water, it will dissolve. Whenever you reproduce the same conditions, you should get the same results, or something is wrong with your experiment. The goal of science is to reduce those regular patterns to mathematical formulas. By contrast, the sequence of letters in a message is irregular and non repeating, which means it cannot be the result of any law-like process. For example, the formula might require that every time you have a D, it is followed by an E. Obviously, if the letters in a real alphabet followed rules like that, you would be limited to spelling only a few words—and you could not convey very much information. The reason a real alphabet works so well is precisely that the letters do not follow rules or formulas or laws. If you know that a word begins with a T, you cannot predict what the next letter will be. With some minor exceptions in English, q is always followed by u, the letters can be combined*

and recombined in a vast number of different arrangements to form words and sentences. It is not merely the case that science has failed so far to answer this question. Rather it is that science can never, even in principle, answer this question. And one is more likely to get a coherent answer to this question from a banana than from an atheist. And how did a universe or universes, if you prefer emerge from a state in which there was no universe—and therefore no space, no time, no matter, no energy, and no laws? There has to be some organizing principle. God to me is a mystery but is the explanation for the miracle of existence, why there is something instead of nothing. What is the chance that the universe is the result of chance? What is the chance that our world is the result of chance? Just as the scientific description of a gunshot that I gave at the beginning of this essay provides an incomplete explanation for the JFK assassination, scientific descriptions of natural phenomena provide an incomplete explanation for those natural phenomena. Because science cannot provide complete explanations to such questions as the origin of the universe and the origin of life, the suggestion that science provides an alternative to God is an open-and-shut category error.

2: Is Like Trying Quotes, Quotations & Sayings

this is a lyrics video of Lateeya's original song Trying To Explain, if there's any mistakes please let me know, but i do not own this song one bit, i just reaaallyyy love it. so like, subscribe.

Has this poem touched you? Rais 8 months ago I can understand the pain. I loved reading this poem. I feel like I am not alone. There are people who understand, whether they are near by place or by heart. Keep on moving forward. Like you, I have written many poems because I find they help to release feelings that sometimes cannot be explained to others. I related with your poem so much that I may put some of my own on this site. The more people talk and share about depression, the more others can accept that it is unfortunately quite common. Margie by Emelia M. Diagnosed when I was 15 and hospitalized twice for trying to end my life. But I can honestly say I would never try it again. You are here, you are important. Now you have realized what the journey a life has. I salute you for your immediate personal attempt to get back to the complete understanding of life. May God bless you, and I hope that you will write some heart-touching verse. I look forward to reading your poetry. I have done the same. Thank u for sharing your story. I hope it all gets better for you! Were you touched by this poem? Share Your Story Here. All stories are moderated before being published. Check Your Spelling or your story will not be published!

3: The Flaming Lips - Try To Explain Lyrics | MetroLyrics

It's The internet has changed. For one thing, everyone is online these days. So why is everything still so The easier option would just be to elec.

It operates in HTML5 if supported, so your images are created instantly. However, you can also upload your own images as templates. How can I customize my meme? You can move and resize the text boxes by dragging them around. You can customize the font color, outline color, and outline width just to the right of where you type your text. You can further customize the font and add additional text boxes in the More Options section. Note that Android and other mobile operating systems may support fewer fonts. You can rotate your meme, add scumbag hats or other custom images, and draw on your meme using the panel just above the meme preview image. You can create "meme chains" of multiple images stacked vertically by adding new images with the "below current image" setting. Can I use the generator for more than just memes?
