ULTIMATE PROJECT MANAGEMENT PROCESS MAP PMBOK 5TH EDITION pdf

The Ultimate Project Management Process Map is the first and only comprehensive diagram that details all of the project management components using the recently updated PMBOK® Guide Fifth Edition.

That document was to some extent based on earlier work that began with a white paper published in called the "Ethics, Standards, and Accreditation Committee Final Report. The Fourth edition was published in The Fifth Edition was released in Processes overlap and interact throughout a project or its various phases. Inputs documents, plans, designs, etc. Tools and Techniques mechanisms applied to inputs Outputs documents, plans, designs, etc. A Guide to the Project Management Body of Knowledge â€" Sixth Edition provides guidelines for managing individual projects and defines project management related concepts. It also describes the project management life cycle and its related processes, as well as the project life cycle. The PMBOK as described in the Guide recognizes 49 processes that fall into five basic process groups and ten knowledge areas that are typical of most projects, most of the time. Process groups[edit] The five process groups are: Those processes required to establish the scope of the project, refine the objectives, and define the course of action required to attain the objectives that the project was undertaken to achieve. Those processes performed to complete the work defined in the project management plan to satisfy the project specifications Monitoring and Controlling: Those processes required to track, review, and regulate the progress and performance of the project; identify any areas in which changes to the plan are required; and initiate the corresponding changes. Those processes performed to finalize all activities across all Process Groups to formally close the project or phase. Knowledge areas[edit] The ten knowledge areas, each of which contains some or all of the project management processes, are: Each of the ten knowledge areas contains the processes that need to be accomplished within its discipline in order to achieve effective project management. Each of these processes also falls into one of the five process groups, creating a matrix structure such that every process can be related to one knowledge area and one process group. Extensions[edit] While the PMBOK Guide is meant to offer a general guide to manage most projects most of the time, there are currently three official extensions: One thrust of critique has come from the critical chain developers and followers e. Goldratt and Lawrence P. Leach , [5] as opposed to critical path method adherents. A second strand of criticism originates in Lean Construction.

ULTIMATE PROJECT MANAGEMENT PROCESS MAP PMBOK 5TH EDITION pdf

2: PMI PMBOK guide showing all processes inputs and outputs

The Ultimate Project Management Process Map is the first and only comprehensive diagram that details all of the project management components using the recently updated PMBOKÂ® Guide Fifth Edition. Follow each knowledge area from output to input.

Tools and Tips for preparing for the exam 1. A process is a set of activities to produce desired output. For example, you need information from your customer representatives. For which, you have prepared questions to interview them. Here list of customer representatives is the input, information you produced is the output and interview is the tool for that information. During the interview, steps of preparing questions and asking questions to selected customer representatives are the activities of transformation of customer representative list input to the Information desired output. Now this produced information can be used as an input to other processes to generate another output. Like, you can apply decomposition tool to create a hierarchical breakdown of items output from the information you produced in the interview input. A systematic series of activities directed towards causing an end result such that one or more inputs will be acted upon to create one or more outputs 2. What are the Process Groups for? A process group is created to club processes which have same management focus. Processes which helps in starting up project or phase. These are grouped under Initiating process group. You need to plan many things to produce project deliverables like but not limited to schedule, cost, quality, resources, communication, etc. Processes which helps in making a proposal of doing something are clubbed under planning process group. Planning does not make any difference till you start doing or executing, the processes facilitating the executing of the plan falls under executing process group. Processes which monitor the execution of project falls under this process group. Processes which brings completing to project or phase are grouped under closing process groups. The Project Management Process Groups include initiating processes, planning processes, executing processes, monitoring and controlling processes, and closing processes. Project Management Process Groups are not project phases. Another way to group processes is to bind them by the specialized nature of work they facilitate doing. For example, those processes working on project scope related area can be grouped under Project Scope Management knowledge area. A process is mapped both in a process group and in a knowledge area. The process which helps you in doing scope planning falls under planning process group, and since it is about working on the scope, we also put it under Scope Management knowledge area. This knowledge area tells you how to bind all processes of project management to achieve project objective, it ensures that schedule and cost plans are integrated. It provides integrated monitoring and change management of the project. This knowledge area manages the complete life cycle of a project from its starting till the end. This knowledge area helps you in managing project scope. This knowledge area helps you in identifying at what point, what is happening. It also keeps eyes on what is going as per plan and where re-planning is needed. It helps you in identifying and managing project timelines. This knowledge area is all about money. Cost is planned for each project activities, some money is reserved for future uncertainties and also cost is monitored during execution and when needed, cost is re-planned to manage the variances. Processes included in this knowledge area ensures quality of project deliverables. This also includes process improvements, quality audit, and controlling activities to achieve customer satisfaction. Uncertainties or risks are the potential of losing value of project deliverables. Sometime purchasing or acquiring of products are needed from the outside sources. This knowledge area includes processes necessary to manage and control the contract from these outside parties. This knowledge area includes processes needed in identifying project stakeholders, make and monitor them engaging to the desired level. Tools and Tips for preparing for the exam You need a unique way of learning which supports you to crack the exam in the first attempt. Set a target date and make a study plan to prepare for the exam. Initially, no need to master each knowledge area, just do sufficient preparation required for a project manager. Take a minimum of practice questions before hitting the final exam, take questions from at least three sources. Take four full-length exams before your final exam to develop endurance. Taking practice exams will not support

you until you analyze the wrong options and fix your identified weak areas.
