Understanding the Divorce Cycle is hopeful yet offers a realistic perspective about the cycle of divorce. Terry Gaspard, MSW, LICSW Author of Daughters of Divorce: Overcome the Legacy of Your Parents' Breakup and Enjoy a Happy, Long-Lasting Relationship (to be published by Sourcebooks January,).

I spent the first decade of my career studying the divorce cycle, the tendency for divorce to run in families. When I began my research, Paul was already an established expert on the consequences of growing up with divorced parents. Both were discussed at length in my book. Paul and his coauthor Sarah E. The established insight is that every family structure transition a child experiences in his or her family of origin cumulatively increases the likelihood of negative outcomes for that child. Parental divorce is one transition, while remarriage is another. At this juncture, I have a quibble with how Paul designed his new study. He chose to count bereavement as a family structure transition, while my work ignored parental death. Why did I exclude it? There are numerous studies showing that compared to divorce, death has minimal consequences for offspring marital behavior. Paul and his co-author cite a single study in support of this decision, but a preponderance of studies—all reviewed in my book—support my decision. To this end, they count the number of unions, marital or live-in, that end in disruption they share my regret of not being able to look at dating, as these relationships are too hard to measure accurately. Their findings are consistent with mine. This finding is adjusted for numerous potentially confounding factors such as age at marriage, religiosity, education, and various parental attributes. Sample size is 6, Data are from the National Longitudinal Study of Adolescent to Adult Health and are weighted to be nationally representative. The importance of this finding is its applicability to offspring marriages and cohabiting unions alike. This proves my point: A couple either ties the knot or calls it quits, and fairly quickly most of the time. Cohabiting couples also tend to be less happy in their relationships. But these folks are the exception rather than the norm, as our study and many others have shown. The demographics of cohabitation are also different. Younger adults, less religious adults, and people with less education are more likely to be cohabiting rather than married. Paul and his co-author are right to observe that the same factors predict cohabitation and divorce. However, that is an apples-and-oranges comparison: The better comparison is divorce and cohabitation dissolution, and here the evidence is more mixed. All of these facts suggest that Paul should have examined divorce and cohabitation dissolution both together and separately to answer the question: My own research found large effects on marital stability, but minimal consequences for cohabitation dissolution. Paul Amato has now produced quality research about the consequences of nonintact parenting for three decades. His most recent article is fresh evidence for an age-old proposition: Bradford Wilcox Oxford University Press,
