

1: Legacy Lifts: Cargo Lifts & Platform Lifts for Residential Homes & Businesses

3D Builder start screen 3D objects can be loaded using 3 different methods. One can either pick a model from the 3D Builder Library, load them from an external file or create a new one from a Kinect v2 Sensor scan (see 3D Scan).

When you are done reading, you may want to view our current vintage and antique half hull models. There are a number of different types of authentic half hulls, all of which had different uses and applications. It is helpful in evaluating a half hull to be aware of their use so they may be compared to others of the same type and to contemporary reproductions. Many pictures of the models in this section, unless otherwise noted, have been sold. This type model was made for the purpose of establishing the shape of the vessel, and was constructed out of a series of planks called "lifts" which were joined together using dowels prior to or by screws afterwards. When disassembled, the individual lifts were laid on the floor and expanded to full size in a process called "lofting". From these shapes timbers were cut, and frames and strakes were assembled to build the full size vessel. They are one off, large rather than medium to small size, and they always can be taken apart. If the name of the vessel is known, their value is greater. The varnished wood has generally mellowed with age and has a rich dark patina. Their value increases with the prominence of the vessel if known, the size of the hull, and of course, most important, its condition. It was made by its master builder and handed down in his family in an unfinished state. After much deliberation, our shop finished it as he would have done. Block and half block models became more common after and builders made these to illustrate the designs provided to them by engineering firms. For ease of use they were held together by dowels. By the middle of the s half block models were common in commercial shipyards, and the use of wood screws had replaced dowel. If you come across a model held together with dowels you know you have something worthwhile. They were used as aids for framing, planking and plating ships. They are usually made using multiple layers of wood, stacked one on top of each other on a horizontal plane, called lifts. The lifts were made to be taken apart, and were used as a template to lay off the lines on the floor. When translated into an elevation drawing, the buttocks appear as curved lines and the stations and waterlines appear as straight vertical lines. Both types of modeling are shown in the diagram below. This half model of the Royal Yacht Squadron schooner Titania is an example of a "buttocks model". If you have a lot of wall area, you want a large model to carry it. The opposite is also true. Also consider how much you really want to spend.

This youth is the only still-unidentified victim of serial killer Dean Corll , who, together with two teenage accomplices, killed at least 28 boys and young men between and These items were found near his body. It is known that he suffered from a mild form of spina bifida. Her body was naked save for a pair of orange socks. She had been killed by strangulation, and had contracted salpingitis in her lifetime. Walker County Jane Doe A teenage female whose body was discovered approximately six hours after she died on October 31 or November 1, Henry Lee Lucas may have murdered her. She had claimed to a waitress that she was 19 but the waitress did not believe her. She was described as wearing a yellow pullover sweater and red heeled sandals. She was also wearing a square or rectangular pendent necklace with a smokey blue or brown stone. The necklace was found on the body and the shoes were nearby but none of her clothing was located. When her body was found it was determined she had only been dead for several hours. She had been viciously sexually assaulted with a large foreign object. A truck driver had seen her body on the north bound side of highway 45 about a mile north of The Hitchin Post truck stop. Harris County Does [edit] A young man and woman who were found in January They were killed approximately two months earlier and left in Houston. Her body was discovered alongside that of a man who was identified as Thomas Rodriguez, and her death had occurred hours prior to her discovery. She was between five feet and five feet two inches, and weighed approximately pounds. It is unknown how both victims were placed at the scene. He could have died as early as , as a coin with that date was found at the site. Because only some bones were located, his height and weight could not be estimated. His torso, along with one or both hands and limbs, was not recovered. He had short brown hair and wore two gray jackets, one made of fleece and the other of cotton. His exact cause of death is unknown, although his death is considered to be a homicide.
