prevail on a claim for negligence, a plaintiff must prove four elements: (1) the existence of a duty of care, (2) a breach of that duty, (3) an injury, and (4) the breach of the duty was the proximate cause of the injury.

As Edward made his way home he concluded an important wool-trade treaty in the Netherlands , which indicated the importance of foreign trade at that time. He also acknowledged the need to improve the style and fineness of English coins to avoid the poor-quality coins which had sometimes appeared during earlier reigns and shaken public confidence in the currency. There was also a need for larger and smaller denominations since the penny had not changed much in years, so the groat 4d , halfpenny , and farthing were successfully introduced. Finally there was the problem of clipping, for which the Jews were blamed. In response to all these pressures, a completely new coinage was struck in with a different design which made clipping much easier to detect. Millions of coins were struck at London and Canterbury and the public could take their old, underweight, short and long-cross pennies to the mint and exchange them for new coins of the correct weight and fineness. This exchange also served as a form of taxation as moneyers were required to charge a fee for the service. The strong, good-quality coins strengthened the economy and brought prosperity to the country. The penny was different from earlier issues in many ways. The treasurer and justiciar of Ireland , Archbishop Stephen de Fulbourn , had permitted the use of similarly debased Dutch shillings as equivalent to pence. King Edward III “ succeeded his father at the age of His reign was a period of conflict with Scotland and France, which is reflected in his coins. New gold coins “ the noble , half noble, and the quarter noble “ were introduced, followed later by the silver groat or fourpence which became very popular and eventually superseded the penny in importance, together with the half groat which was also popular. Together with the production of half pennies and farthings, England had at last an adequate supply of varying denominations which benefited both internal trade and trade with other countries in Europe where English coins were readily acceptable. No more pennies were minted until his third, or florin, coinage in “ so-called because the dies were made by two craftsmen from Florence. After the treaty was repudiated by the French in the claim to France was reinstated and England and France went to war again, though England lost most of its French possessions except Calais and Bordeaux. During the post-treaty period the Durham and York mints became ecclesiastical mints, under the authority of the local bishop or archbishop, and thus a source of money for the Church. England continued to lay claim to France, and remained at war until ; high taxation to pay for the war caused several peasant uprisings. This was a turbulent time with wars being fought in both Scotland and Wales, and the coinage problems of the previous reign continued; the price of silver and gold was low in England compared to Europe, and coins were illegally smuggled abroad, causing major problems in England as not only were there insufficient coins in circulation, but the mints could not buy enough bullion to make new coins. Henry VI “, “ came to the throne as an infant. He favoured making peace with France, but his heir, Richard, Duke of York, a descendant of the second son of Edward III, favoured war; this disagreement precipitated the outbreak of the Wars of the Roses between his supporters, the Lancastrians red rose , and those of the Yorkists white rose. This restoration was only brief, however, as Edward mustered more support and after two battles at Barnet and Tewkesbury Edward was back on the throne in April where he stayed until his death in Henry was returned to the Tower, where he was murdered the same night. Pennies were minted at London, Calais, York, and Durham. By this time all reigns used mintmarks on their coins to identify the moneyers. Edward IV died suddenly in and was succeeded by his twelve-year-old son Edward V. Edward and his younger brother Richard, Duke of York, were taken to the Tower of London, and the Princes in the Tower were never seen again. Who was responsible for their ultimate fate remains a topic of heated discussion to this day. There is evidence that some coins were struck for King Edward V, but it is uncertain that any have survived. Richard III “ was the last of the Plantagenet kings. Allen Catalogue of English Coins:
