March 10, Holly Springs, MS St. Andrews Episcopal Saints (Ridgeland, MS) backers were in high spirits Saturday as they witnessed their basketball squad tip the host Holly Springs Hawks (Holly Springs, MS), in a non-league bout.

Sport-Rite air bags use a tapered sleeve style air spring that is capable of supporting up to 3, lbs per set. You will see drastic improvements while hauling and towing, with more control, stability, and load support. Each Sport-Rite application is designed to maximize the safe load carrying capacity of the specific vehicle at hand. Just like the Ride-Rite, installation of the Sport-Rite will be between the axle of your vehicle and the frame. The Firestone Sport-Rite is perfect for that driver who occasionally uses their vehicle for towing a boat or towing a trailer. Kits come with two air springs, brackets, air line tubing and hardware. Popular Sport-Rite Kits Firestone - Chevy Silverado, Sierra Coil-Rite Air Spring Kits Designed to fit existing coil spring suspensions, Coil-Rite air helper springs can greatly improve the ride, handling, and braking of your vehicle, front or rear. Coil-Rite air bag helper springs provide extra support for the existing coil springs in your car, truck, suv, rv, or van. The air springs are adjustable, with the ability to level your vehicle, and assist with more effective braking, loading and handling, providing an overall smoother ride. Coil-Rite air helper springs are made of durable, elastic polyurethane, and will level provide maximum performance even under heavy loading and unique road conditions. The coil-rite models are fully adjustable, and can be altered as easily as inflating a tire. The air pressure inside of the springs can be controlled, allowing the air bag inside the coil spring to support - 1, lbs. All Firestone suspension air bag kits are custom made for your vehicle. Whether your looking to install a full air bag kit like Firestone or installing air bags into your pre-existing coil springs like Firestone , you will receive high quality parts and peace of mind. For the most part, installation time varies between one to two hours. To begin, you will pre-assemble your air springs by attaching the upper and lower brackets and securing the air fitting. Most of the Firestone air bag kits will require you to remove the jounce bumper. Once you have attached the air bag, you will then run the air line tubing to the inflation valves. When it comes to finding a location for the inflation valves, we have notice from our customers that the rear of the truck, near the license plate is a good place. It is out of the way from anything that could damage it and all you have to do is back your truck up to a compressor, fill the air springs up, and then be on your way. For full installation procedures, each product has an installation manual to download or print. We also feature an installation video of a Firestone Ride-Rite kit being installed on a Dodge Ram No Drill Kits While selecting your firestone air bag kit, you will notice most of the kits have a No Drill feature. These kits come standard with brackets. This will eliminate drilling or modification during installation which could damage your vehicle. This is due to the preexisting holes that are drilled to match the holes within the frame of your truck. The holes that will mount the air bag kit are mounted on the opposite side of the gooseneck hitch , which will allow for both of them to exist without an issue. Air Bag Accessories Looking for Firestone air bag accessories? We offer suspension components to help replace broken or missing parts including pressure switches , air fittings , and replacement air bags. We offer lift spacers that will mount on the axle and give you different heights that will insure your vehicle operates correctly. The lift spacers will bridge the extra distance created by the lift kit. Please note that lift spacers are only available for the Ride-Rite kits. Firestone suspension air bags are a manual kit and require you to supply the air to your air springs. With a Firestone on board air compressor , you will get an instant air source. By flipping the switch, the air compressor will adjust your ride for various load and road conditions. We offer standard and heavy duty compressors from Firestone as well as mounting brackets, accessories and components. To further help you in deciding the right firestone air bags kit for your vehicle, we have Firestone Air Bags reviews and ratings, with a average rating of 4. Reviews can be seen on their product pages. Choosing the right firestone air helper for your vehicle is not always an easy process. Unlike other online shops, our customer support representatives are actual mechanics who are seasoned in fitting, installing, and maintaining truck and SUV helper springs.

A small representation of the endless art that Palm Springs holds in every nook and cranny. "Palm springs is one of the great repositories of mid-century modern architecture," volunteer Robert Stone, said.

History[edit] This section possibly contains original research. Please improve it by verifying the claims made and adding inline citations. Statements consisting only of original research should be removed. In Pechanga mythology, life on earth began in the Temecula Valley. The Temecula Indians "Temeekuyam" lived at "Temeekunga" – "the place of the sun". The wine industry was founded by the Californios ; colonial Spanish settlers planted grapes and vineyards well-suited for the climate. The vineyards were then adapted by Anglo-American settlers and European immigrants from Spain , Italy and France in the late 19th and early 20th centuries. It was fertile well watered land at the southern end of the valley, which included the village of Temecula. Within a year, the Butterfield Overland Mail stagecoach line, with a route between St. This was the second post office in the state, the first being located in San Francisco. The Temecula post office was moved in the ensuing years. Its present locations are the seventh and eighth sites occupied. The American Civil War put an end to the Butterfield Overland Stage Service, but stage service continued on the route under other stage companies until the railroad reached Fort Yuma in In , the line was extended to San Bernardino. In the late s, a series of floods washed out the tracks and the section of the railroad through the canyon was finally abandoned. The old Temecula station was used as a barn and later demolished. In the s, with the operation of granite stone quarries, Temecula granite was shaped into fence and hitching posts, curb stones, courthouse steps, and building blocks. At the turn of the 20th century, Temecula gained a place of importance as a shipping point for grain and cattle. In Walter L. Along with various partners, he began buying land in Southern California. Vail was killed by a street car in Los Angeles in ; his son, Mahlon Vail, took over the family ranch. In , the first paved, two-lane county road was built through Temecula. Through the mids the economy of the Temecula Valley centered around the Vail Ranch; the cattle business and agriculture were the stimuli for most business ventures. In , the Vail Ranch was sold to the Kaiser Aetna partnership. The I corridor between Los Angeles County and San Diego was completed in the early s and the subdivision land boom began. Many families began to move to the area from San Diego and Orange County drawn by the affordable housing prices and the popular wine country. In fall , the Promenade Mall opened in Temecula. In , Temecula expanded greatly by annexing the neighboring planned community known as Redhawk, bringing the population to 90, After a period of rapid population growth and home construction, the subprime mortgage financial crisis and the resultant United States housing market correction caused a sharp rise in home foreclosures in the Temecula-Murrieta region. Most precipitation occurs from November to March with February being the wettest month. The driest month is June. Annual precipitation is Morning marine layer is common during May and June. From July to September, Temecula experiences hot, dry weather with the occasional North American monsoonal flow that increases the humidity and brings isolated thunderstorms. Most of the storms tend to be short lived with little, if any rainfall. During late fall into winter, Temecula experiences dry, windy north-eastern Santa Ana winds. Snowfall is rare, but Temecula has experienced traces of snowfall on occasion, [31] some as recently as December

Ranging from coil springs to strut extensions, Rancho Suspension Inc. has engineered lift kits for the majority of popular trucks and are designed for maximum performance both on and off the road. A one piece sub frame is included with many Rancho suspension kits and will fit on trucks and Jeeps with up to 35" tires added on.

In the background right is a newly construction restroom facility. A rededication ceremony was held at the property on June Attendance was by invitation only. Around people attended the ceremony, selected from nearly 30 different LDS stakes throughout the region. It included a prayer of rededication of the site, given by Stoddard. Within a week after the services, the Warm Springs area appeared on the Church website allowing Church members to reserve the facility for group activities. The above view as it appeared earlier last year, previous to the renovation. Tule Springs Stake President Daren Richards, who was assigned to the administration and scheduling of the facility, said that reservations have quickly come in. More than 50 bookings were made in little over a week. I think it was a very good decision for the Church to keep the property and to reopen it. The property was closed seven years ago, when a huge wildfire swept through the Warm Springs area on July 1, , burning more than acres in the neighborhood. Before the fire had been brought under control, it had completely destroyed the LDS Recreation area. In the weeks after the fire, the Church hired a contractor to clear out the debris. But there were no immediate attempts to rebuild. A year later, a major flood rushed through the area, putting what was left of the infrastructure underwater and washing some of it away. The floods left a thick layer of mud in the pools, washed away bridges, destroyed campsites and washed out the road that accessed them. It took several years for the Church to decide how to proceed with the ravaged property. But last year contractor crews began the work of clearing overgrown vegetation, rebuilding infrastructure, restoring the spring-fed swimming pools and even adding new facilities. Pictured above a view of the lower cement-lined pool across an overgrown yard area as it appeared last year. Pictured right is the same view as it appears today with the overgrowth cleared and pool restored. This beautiful facility, alongside the original spring pool, can accommodate a large group activity. On the hill above the new pavilion, and connected to it by a concrete path, is a newly constructed restroom building. The lower, concrete-lined pool has been restored and resurfaced. The previously crumbling concrete walkways around the pool have been replaced. The picnic pavilion in that location has been refreshed and newly painted. Sprinkler irrigation systems on the large fields below and above the pool areas have been repaired and the fields have been mowed and maintained. These two fields are also currently available to be booked for group camping and other activities, along with the two pools. Of course, there are fees to reserve the facilities for groups. The areas are reserved in time, morning and evening time block. There was a pretty big initial capital outlay for equipment and maintenance on this facility. Once some of that is recovered, we are in hopes that within a year or so we can see those fees reduced somewhat. Pictured right is the new picnic pavilion constructed on the same spot with the spring flow coming from the pool running alongside. Currently the facility is only opened for group reservations. Open pool hours; where individuals or families can just come, pay a small per-person fee, and swim; are not yet being offered. But Richards said that those open swim hours are currently in the works. Some additional planning and coordination must take place to be ready for that, he said. LDS Service missionaries are expected to be assigned to the area soon. RV pads have been built with full hookups to provide those missionary couples a place to stay during their service. Resident missionaries would be needed to schedule open hours for the pools, Richards said. In addition, policies still must be developed regarding lifeguards during open swim hours. These policies are not required for group scheduled activities, because groups must agree to provide their own lifeguard services. But lifeguards would need to be scheduled in order to schedule the open swim times, Richards said. Those policies are still in development, he said. Those are coming too, he said. We want to keep working on making the facility more user-friendly. Another future focus may be to restore the campsites that were once in use in the fields below the pool area. Those areas have become overgrown through the years and would need significant work to reclaim them as campsites, Richards said. When member groups or Boy Scout troops are looking for service projects, they will be able to go to that

list and choose a project that suits them, he said. The requirements and specifications for each project will be detailed and the exact scope of work for projects will be made clear in advance. All information for reserving the facility will be available there.
