3: Technical Publications. GTU Text

Pharmacy is an interdisciplinary field of science covering each and every aspect related to drug. The profession of Pharmacy has now evolved from the traditional compounding and dispensing of drugs to the most advance clinical aspects of drugs and patient care system.

This course involves the study of the treatment of common geriatric disease states in multiple care settings and involves case-based discussion with an interprofessional team of students and instructors. A physical assessment course to include instruction in performing physical assessment exams for all major organ systems, patient interviewing, and documentation for students who are interested in incorporating clinical pharmacy into their future practice. An introduction to physical pharmacy and biopharmaceutical principles impacting drug development and the performance of pharmaceutical dosage forms. The first in a series of six courses, students are introduced to prescription processing and dispensing as well as patient communication. Drug information retrieval, Top drugs, pharmaceutical calculation, and medical terminology are included. The fundamental basics of human pathophysiology and diagnostic tests used to evaluate normal and disease-based biomarkers and the underlying principles of immunology are presented as foundation for in-depth organ-specific disease states discussed in subsequent courses. This course will allow students to develop an understanding for the profession, insight into themselves as future health care professionals and enable students to learn the fundamentals of professional communication in healthcare settings. Explores the current U. An introduction to the influence of absorption, distribution, metabolism, and excretion on the time course of drug levels in body as well as fundamental principles in the design and manufacture of dosage forms. This course will specifically cover an introduction to pharmacology, basics of drug metabolism and the structure-activity relationships SAR, toxicology and elimination of drugs that act upon the autonomic nervous system. The second in a series of six courses, students continue dispensing and professional communication skills. Basic drug information, Top drugs and non-sterile compounding. The introductory course to the Integrated Pharmacotherapeutics sequence presents the pathophysiology, pharmacology, medicinal chemistry, and pharmacotherapeutics pertaining to self-care and non-prescription pharmacotherapy. Introduction to pharmacy law with considerations of professional ethics and social determinants of health that impact the professional practice of pharmacy. Series of seminars with focus on professionalism, leadership development, career exploration and decision-making, post graduate education opportunities, and contemporary professional practice issues influencing patient care. The first course in the Integrated Pharmacotherapeutics sequence presents the pathophysiology, pharmacology, medicinal chemistry and pharmacotherapeutics as they relate to use in general ambulatory care for cardiology, endocrinology, and pulmonary disease states. The second course in the Integrated Pharmacotherapy sequence presents the pathophysiology, pharmacology, medicinal chemistry and pharmacotherapeutics as they relate to use in general ambulatory care for endocrinology, musculoskeletal pain and psychiatry. Introduction to basic concepts of pharmacoepidemiology and research study designs used to evaluate health, disease, and drug utilization. Methods of critical evaluation, analysis of biomedical literature, identification of reliable and valid research outcomes are presented. The third course in the Integrated Pharmacotherapy sequence presents the pathophysiology, pharmacology, medicinal chemistry, and pharmacotherapeutics as they relate to antibiotic treatment of bacterial infections. This course develops skills to determine validity, applicability and significance of published clinical research for potential application in optimizing patient care. Patient History and more complex patient cases. The fourth course in the Integrated Pharmacotherapeutics sequence presents the pathophysiology, pharmacology, medicinal chemistry and pharmacotherapeutics as they relate to use in complex ambulatory care setting for a variety of disease states. Provide a basic understanding of how to manage resources and optimize healthcare resource allocation with emphasis on drug treatments. Introduction to principles, skills, and practices relevant to successful business operation and management in a variety of pharmacy practice settings. The fifth course in the Integrated Pharmacotherapy sequence presents the pathophysiology, pharmacology, medicinal chemistry, and pharmacotherapeutics as they relate to fungal and viral infections. The sixth course in the Integrated

VIII. PHARMACY 599 pdf

Pharmacotherapeutics sequence presents the pathophysiology, pharmacology, medicinal chemistry, and pharmacotherapeutics as they relate to use in complex ambulatory care for neurological and psychiatric disease states. The seventh course in the Integrated Pharmacotherapeutics sequence presents the pathophysiology, pharmacology, medicinal chemistry and pharmacotherapeutics as they relate to use in treatment and management of oncological disease states. The eighth course in the Integrated Pharmacotherapeutics sequence presents the pathophysiology, pharmacology, medicinal chemistry and pharmacotherapeutics as they relate to use in complex hospital care for cardiology, nutrition, critical care and clinical toxicology. A topics course intended to increase student awareness and understanding of contemporary issues related to pharmacy practice, pharmaceutical industry and health care. A review of state and federal statutes and regulations governing pharmacy within New Mexico. Compare and contrast current regulation with ethical decision making situations involving health care.

4: PHA - Wilkes University

The Doctorate of Pharmacy (PharmD) Program is accredited by the Accreditation Council for Pharmacy Education (ACPE) through June 30, Contact the School of Pharmacy website for current accreditation status.

The University of Hawai'i at Hilo's Daniel K. Inouye College of Pharmacy (DKICP) is a four-year educational and experiential program through which students pursue the Doctor of Pharmacy (Pharm.D.) degree.

In particular, this course will focus on skills communication, teamwork, attitudes and other content relevant to the practice of pharmacy. This course fulfills experiential requirements and so students will have the opportunity to interact with pharmacists and patients. The use of case studies, role-plays, presentations, and other active-learning strategies engages students in the learning process and requires them to synthesize information at increasing levels of complexity as the student moves through the course sequence. P-1, P-2, or P-3 standing, as appropriate for each laboratory. Pharmaceutical and Health Care Delivery Credits: Emphasis is on public policy, economic behavior, and outcomes. Application will be made to various pharmaceutical sectors e. Students should gain an understanding of the factors driving transformation of health care delivery and the implications for future pharmacy practice. P-1 standing or consent of the instructor. Clinical Research and Design Credits: The purpose of this course is to learn how research studies are designed to answer specific clinical questions, and how the study design is important in interpreting the results of the studies. Students will apply research design concepts and statistical techniques to design, critically analyze, and interpret preclinical, clinical, and economic studies of pharmaceuticals and treatment plans. The study of quantitative skills necessary for an understanding of the basic and clinical pharmaceutical sciences, including skills in pharmaceutical calculations and extemporaneous preparation of dosage forms. Interpretation of the prescription, including Latin abbreviations, will be discussed. Medical terminology and the generic name, trade name, manufacturer, and classification of the top drugs will also be presented. Lecture one hour per week. P-1 standing or permission of the instructor. Two hours per week. This course is restricted to enrolled Pharmacy students. Consideration may be given to non-pharmacy students with overall GPAs of 3. The course fosters the development of professionalism in an environment of practical application of knowledge, skills, and attitudes. Students will be faced with a variety of issues practical to community pharmacy. The student will take an independent learning approach under the supervision of a practicing community pharmacist. The course is two full-time weeks 80 hours of experience. Pre-Requisites Successful completion of all required courses in the P-1 year or permission of instructor. The catabolism of carbohydrates, fats and amino acids will be discussed including reactions and regulation. Common metabolic pathways of drugs, enzyme induction and metabolism down regulation will also be presented. Four hours per week. Pre-Requisites P-1 standing or consent of the instructor. Design and Control Credits: Focus is upon effectiveness, efficiency, and quality. Covers design of systems, establishment and monitoring of key indicators, total quality management, and quality assurance agencies e. Immunology and Biotechnology Credits: Products that impart artificial active and passive immunity are presented. The concept of biotechnology is discussed together with the currently available products of genetic engineering that relate to immunology. The various immunological disorders and the immunology of cancer and HIV are discussed. Biopharmaceutics and Clinical Pharmacokinetics Credits: The physical and chemical properties of the drug, dosage form, route of administration, patient characteristics, and disease state will be related to the absorption, distribution, metabolism, and elimination in the body. Students will become familiar with calculations for individual drugs to determine regimens that optimize the safety and effectiveness of medications for individual patients. Management of Pharmacy Operations Credits: Pre-Requisites PHA or consent of the instructor. This particular course will emphasize the most fundamental concepts central to drug therapy. A major emphasis will be placed on the interactions of drugs with their cellular targets in the human body, and the chemical properties of drugs that dictate their biological activity. Principles of Pharmacotherapeutics Credits: This team taught course is designed to provide students with an opportunity to learn, observe and apply concepts of these four content areas in an integrated manner. Concepts in each of these content areas will be emphasized to provide the necessary information for understanding Pharmacotherapeutics principles. Concepts in each of these content areas will be emphasized to provide the necessary information for pharmaceutical management of dermatological disorders and self-care issues.

Concepts in each of these content areas will be emphasized to provide the necessary information for pharmaceutical management of gastrointestinal diseases. Concepts in each of these content areas will be emphasized to provide the necessary information for pharmaceutical management of infectious diseases. Joint, Autoimmune and Musculoskeletal Disorders Credits: Concepts in each of these content areas will be emphasized to provide the necessary information for pharmaceutical management of joint, autoimmune and musculoskeletal diseases. Learning about this emerging field will enable students to better understand and manage new genomics-based diagnostic tools and make personalized treatment choices. Students will also spend time discussing societal and ethical implications of genetic testing and the resultant individualization of drug therapy, explain basic principles of human genetics and heredity, and more. Students will have an independent approach to learning and gain a broader understanding of these settings and the role that pharmacists may play. Successful completion of all required courses in the P-1 year, or permission of instructor. Students will be faced with a variety of issues practical to this area of practice. Successful completion of all required courses in P-2 year, or permission of instructor. Neuropharmacology of Drugs of Abuse Credits: Drug testing and substance abuse treatment strategies will also be discussed. Students will work independently on research assignments and compounding preparations. Concepts in Primary Care Credits: This course will be of value to pharmacy students seeking careers in ambulatory care pharmacy practice, community pharmacy, long-term care and population health management. Topics are presented in a case-based discussion format that includes multiple diseases and medications and through student-led mini topic discussions. Aspects of Caring for the Pain Patient Credits: Fall, Winter This course is an interactive and interprofessional approach to the assessment and management of pain. Various teaching and learning strategies will allow students to develop and appreciate the understanding of the social, psychological, physical, spiritual and ethical implications of pain. Informatics deals with data generated by software used in patient care, not only the storage of data but also the retrieval of data as meaningful clinical reports. P-2 standing or consent of the instructor. Pharmaceutical knowledge and skills will be applied in communications, health assessment, monitoring or pharmacotherapy, evaluation of both humanistic and clinical outcomes. Three hours per week. Students are responsible for transportation to and from all off-campus experiential sites. Civil liability in pharmacy practice and elements of business and contract law will be covered. Quality of life and outcomes research will also be explored. Emphasis is on understanding evaluation methods and research design and interpreting the relevant literature for practice applications. Pre-Requisites Successful completion P1-P3 curriculum in full. Concepts in each of these content areas will be emphasized to provide the necessary information for pharmaceutical management of pulmonary diseases. Concepts in each of these content areas will be emphasized to provide the necessary information for pharmaceutical management of renal diseases. Concepts in each of these content areas will be emphasized to provide the necessary information for pharmaceutical management of endocrine diseases. Concepts in each of these content areas will be emphasized to provide the necessary information for pharmaceutical management of CNS and mental health disorders. Integrative Medicine and Nutrition Credits: Additionally, students will learn about nutrition support practices, including enteral and parenteral care. Introduction to Hospital Pharmacy Practice Credits: Topics discussed include the accreditation process for hospitals, career options and residency or fellowship training, medication formulary management, automation and technology in hospital pharmacies, medication calculations, medication safety, clinical pharmacy practice, and sterile product preparation. The student will be introduced to principles in pharmacy and fiscal management, professional development, and the management and legal issues relating to clinical pharmacy services. Didactic and active learning techniques will be employed throughout the course and the student will be required to develop a business plan. The course prepares students to identify and address drug-related problems in pediatric patients and to demonstrate competency within those areas. This will be accomplished by completion of case scenarios, actual patient presentations, and a take-home examination. P-2 or P-3 standing. Comprehensive Diabetes Management Credits: Students who successfully complete the course will have knowledge and the basic skill set that is needed to begin practicing diabetes management. The majority of this course is independent self-study of online lectures, but there are mandatory on-campus discussions and exams. Managed Care Pharmacy Credits:

VIII. PHARMACY 599 pdf

The elective will introduce and reinforce the concepts of population health and value, explore tools available to limit healthcare spending, and discuss unique ways pharmacists can be involved in improving patient care. This course will be offered during the spring semester each year. Principles of Bioorganic and Medicinal Chemistry Credits: Spring This will be an introductory course, the aims of which are to provide the principles of bioorganic and medical chemistry, including an understanding of drug structure-activity relationships, prediction of the physicochemical properties of a drug, basic knowledge of the major pathways of drug metabolism, and factors that can contribute to drug-drug interactions. Fall This course will provide introductory practice experience to students in the clinical telepharmacy setting. Students will gain a broader understanding of this setting and the role that pharmacists may play. Role of Phytochemicals on Health and Disease Credits:
