VISUAL BASIC HINDI NOTES pdf

1: Visual Basic Part 1 | | Computer Hindi Notes

Visual Basic - Programming Fundamentals Notes in Hindi as well as English language Notes covered only Programming Fundamentals portion and Controls and User Interface elements portion was not covered in the notes since Visual Basic was quite wide and needed a lot of time and effort to create notes.

Next Page An object is a type of user interface element you create on a Visual Basic form by using a toolbox control. In fact, in Visual Basic, the form itself is an object. Control Properties All the Visual Basic Objects can be moved, resized or customized by setting their properties. A property is a value or characteristic held by a Visual Basic object, such as Caption or Fore Color. Properties can be set at design time by using the Properties window or at run time by using statements in the program code. Property is the characteristic you want to change. Value is the new property setting. Most of the properties can be set or read during application execution. You can refer to Microsoft documentation for a complete list of properties associated with different controls and restrictions applied to them. Control Methods A method is a procedure created as a member of a class and they cause an object to do something. Methods are used to access or manipulate the characteristics of an object or a variable. The requirements of such a method depend on the class being used. If none of the existing methods can perform your desired task, you can add a method to a class. Object, ByVal e As System. For example, when a user clicks a control on a form, the form can raise a Click event and call a procedure that handles the event. There are various types of events associated with a Form like click, double click, close, load, resize, etc. Following is the default structure of a form Load event handler subroutine. Similar way, you can check stub code for click, double click. If you want to initialize some variables like properties, etc. Net provides a huge variety of controls that help you to create rich user interface. Functionalities of all these controls are defined in the respective control classes. The control classes are defined in the System.
