

## 1: Historical Account of the Most Celebrated Voyages, Travels, and Discoveries

*Voyages and Travels Ancient and Modern* These seven accounts move from the ancient fathers of historical prose Herodotus and Tacitus in Egypt and Germany, respectively, to the great Elizabethan explorers Drake, Gilbert and Raleigh as they colonize new lands.

In fact, it appears that the possibility to travel in time, either into the future or into the past, has appealed to the imagination of mankind for centuries. Albert Einstein for example, concluded in his later years that the past, present, and future all exist simultaneously, and most are familiar with his well-known concept of relativity. That is, that time is relative and not absolute as Newton claimed. With the proper technology, such as a very fast spaceship, one person is able to experience several days while another person simultaneously experiences only a few hours or minutes. The majority of physicists have been slow to give up the ordinary assumptions we make about time. However, if time travel really was possible, one can hardly contemplate what this may mean for humanity for whoever has the power to move through time, has the power to modify history. While this may sound attractive, it would be impossible to know the consequences of any alteration of past events, and how this would affect the future.

Time travel in ancient mythology If we look into ancient texts we can find a number of references to time travelling. In Hindu mythology, there is the story of King Raivata Kakudmi who travels to meet the creator Brahma. The explanation Brahma gave to Kakudmi is that time runs differently in different planes of existence. Similarly, we have references in the Quran about the cave of Al-Kahf. They woke up years later. This story coincides with the Christian story of the seven sleepers, with a few differences. Another story comes from the Japanese legend of Urashima Taro. Urashima Taro was an individual who was said to visit the underwater palace of the Dragon God Ryujin. He stayed there for three days, but when he returned to the surface, years had passed. In the Buddhist text, Pali Canon, it is written that in the heaven of the thirty Devas the place of the Gods, time passes at a different pace where one hundred Earth years count as a single day for them. And there are many more references. However, it was said that the experiment went terribly wrong – the ship not only vanished completely from Philadelphia but it was teleported to Norfolk and went back in time for 10 seconds. When the ship appeared again some crew members were physically fused to bulkheads, others developed mental disorders, a few disappeared completely, and some reported travelling into the future and back. In, we have another interesting case report of scientist Pellegrino Ernetti, who claimed that he developed a machine that would enable someone to see in the past, the Chronivisor. His theory was that anything that happens leaves an energy mark that can never be destroyed something like the mystical Akashic Records. So he allegedly developed this machine that could detect, magnify and convert this energy into an image – something like a TV showing what happened in the past. In the s, there are reports of another controversial experiment, the Montauk project, which again allegedly experimented with time travel among other things. Whether the Philadelphia and Montauk experiments actually took place is still under debate. However, it is common sense to assume that the military would definitely be interested in the possibility of time travel and would engage in extensive research on the subject. Moving on, in, Marlin Pohlman applied for a patent for a method of gravity distortion and time displacement. And only last year, Wasfi Alshdaifat filed another patent for a space compression and time dilation machine that could be used for time travel. He predicts that human time travel will be possible in our century. Particle physicist Brian Cox agrees that time travel is possible but only in one direction. We have the mysterious story of Ali Razeqi, managing director of the Iranian Centre for Strategic Inventions, who claimed that he developed a device that can see anywhere from 3 to 5 years in the future. His initial story disappeared from the internet a few hours after it was published. In theory, time travel is possible, even if it is difficult to comprehend. Has the research cited above brought us closer towards making time travel a reality? If so, we can only hope that the technology does not get into the wrong hands.
