2: Beginner's Guide to Creating Charts in Microsoft Excel

Wazoo's Manual Charting & Targeting Tutorial [v] Introduction. Donations Welcomed! Mods and Tools Required. Section I - Manual Charting While at Dead Stop.

Displays the percentages of a whole for each member in a series. Excellent chart for comparing values in a single series as percentages of a whole. Column Chart Using vertical columns, displays values for one or more series over time or other category. Especially effective in comparing values for multiple series. Bar Chart Displays values for one or more series using horizontal columns. Though useful for single or multiple series, this chart type especially effective in comparing large quantity of values in a single series. Line Chart Displays values as equally spaced points connected with a line. This chart is most useful displaying trends over time or other ordered category for single or multiple data series. Click and drag the cursor from the top left cell to the bottom right cell of the worksheet - including column and row headings when possible. If your worksheet has a Totals column like in our worksheet above e. Year , this data is typically not charted. Non-contiguous rows and columns of cells can be selected by pressing and holding the Ctrl key while selecting each group of cells. A data series is a related set of data points. In the image above, we selected a single series, Flowers. It is outlined in red. Many chart types allow us to plot multiple series. If we had selected Flowers, Shrubs, and Trees, we would be charting 3 series. In the new versions of Excel, hover the cursor over a chart type or sub-type on the Insert ribbon to display a description of the chart. Click the Insert tab. Click the chart type from the Charts section of the ribbon. The sub-type menu displays. Click the desired chart sub-type. The chart appears on the worksheet. If you want to create a second chart, click somewhere in the worksheet to "deselect" the current chart first, or the new chart will replace the current chart. Create a Chart in Excel , , and 98 Note: In older versions of Excel, click the chart type or sub-type in the Chart Wizard to display a description of the chart. The Chart Wizard appears. Click the desired chart type in the left column, and click one of the chart sub-types in the right column. Excel assumes you wish to keep the series data in rows. You may click "Columns" to see how the chart changes. When finished, click Next. Type a chart title. If you wish to add a title for the axes, do so. Excel assumes you want the chart placed on the worksheet. If you would like the chart placed in a new sheet, click the radio button, type a sheet name, and click Finish. When selecting a chart, be careful not to click on an element inside the chart or that element will be selected instead. To delete an existing chart, select the chart and press the Delete key, or right-click and select Cut. How to Move a Chart To move a chart to a different place on the worksheet, select the chart and drag it to the desired location. To move a chart to a new or different spreadsheet in the same workbook, select the chart, right-click, and select Move Chart. Then choose the sheet or type in a new sheet name, and click OK. It is better to use multiple charts to express patterns and relationships between data than to use one chart that is too busy and over-complicated. A colorful chart is ideal for online presentations or for printing on a color printer. But shades of gray are best for monochrome printing of charts.

Wazoo's Manual Charting & Targeting Tutorial I'm posting this because the links were down, really would like a good online copy. Hopefully this helps some like me who were late to the party from searching for it.

Follow the steps below to add a chart control to your Windows Forms for Web application. To add a chart control to your application In design view, open the Toolbox. From the Data category, drag a Chart control to the design area. If you cannot see the Chart control in the Toolbox, right click in the Toolbox, select Choose Items, and then select the following namespaces in the. NET Framekwork Components tab: Charting Note To find the Chart control more easily in the Toolbox, hide the inactive controls. To do this, right-click the Toolbox, and clear Show All item. Right-click the Chart control in the design area and select Properties. In the Properties window, click the Categorized button. In the Chart category of the Properties window, click the ChartAreas collection property, and then click the ellipsis button â€¦. This opens the ChartAreas Collection Editor. Notice that the collection already contains a chart area named "ChartArea1". Click Add, and then click OK. A new ChartArea object is added to the collection with the default name "ChartArea2". Notice that the chart in the design area shrinks to half the original size. This is because the newly created chart area is placed at the bottom, but does not contain a data series yet. In the Properties window, click the Series collection, and then click the ellipsis button. This opens the Series Collection Editor. The Series collection a SeriesCollection object contains all data series in the Chart control. Notice that the collection already contains a series named "Series1". In the Series Collection Editor, click Add, and then set the following properties with the newly created Series object:

Does Wazoo's Manual Charting & Targeting Tutorial still exist? The link doesn't work anymore in the newbie sticky.

This has the tremendous benefit, once you set up your TDC correctly, of enabling the rapid deployment of your torpedoes against one or more targets by just aiming your scope at the target, taking a quick range finding, and then firing. It is a perfect solution for engaging multiple targets traveling along the same course and at the same speed; in other words This tutorial does not address the issues of navigating to the optimal firing position vis a vis your single or convoy targets prior to engagement. Although this example successfully engages a target from the starboard stern position, it is often advantageous to motor ahead of a target or convoy, and engage from a position forward of the target s. The Fast 90 Tutorial which follows uses the course and speed data collected in Section I above. When you have a nice, overlay, left click for Click 2. Now move perpendicular to the course line and rotate the mouse until the angle at Click 2 shows 90 degrees. At this point lock it in by left clicking for Click 3: Now that we have a perpendicular line plotted, we need to find what course that line corresponds to so we can then order our U-Boat to that new heading. Our U-Boat would enter the Compass at degrees. This is our perpendicular course. For the mathematically inclined, the Perpendicular Course to Target can be determine without using any additional mapping tools. The calculation is a bit different based upon whether you are approaching the target from its starboard or port side. If the result is less than zero, add to the result. If the result is greater than , subtract from the result. We calculated a target course in the examples above of 56 degrees. As we are approaching the target on its starboard side, the Perpendicular Course to Target is: As this is less than zero, we must add back to get a result of ; exactly what our Protractor method revealed. Compass Clicking Unfortunately, this is one area of SHII that is a bit of a shortcoming; the inability to easily enter a specific course. In our example, we want to turn to course Find the Course Compass in the bottom right of the screen and select the course you desire on the outside ring of the compass: If you are not in motion, give a command to move yourself forward at the desired speed to make your turn. Heading to View Command Patch 1. Doing this requires a quick calculation using the following formula: If the result is a negative number, add This tells you that you can now change settings manually. In our example, it is between 3 and 3. In the real War, Admiral Doenitz issued a ban on using magnetic torpedo triggers for a period of time early on due to their horrific failure rate. If you have Duds selected from the main menu, expect some realism! Some of the torpedoes have the ability to set running speed. Slower speeds go longer distances, but give the target more time to spot and evade the torpedo. I always set to fast speed as I rarely shoot over meters especially when I have to first identify a ships nationality! This will update the gyro with the new torpedo speed. The only indication that you have done anything with the click will be the change of position of the gyro dial s. Determine the Degree Span of the Target At any given range to a target, the total degrees that the target spans your optic will vary. The closer to the target, the more degrees in the viewfinder the target will span. The farther away, the less degrees. To determine what the total degrees of view are for the target, place the vertical line of the scope at the stern of the target and take a bearing reading: Next, quickly move the vertical line to the bow of the ship and take a second bearing reading: The difference between the two readings is the amount of degrees your target spans at the current range. In the example above, the degree span is - or 8 degrees. Last edited by Svonne; at

5: Beginner's Guide To NinjaTrader: Advanced Features

I did a tutorial for those interested in learning how to manually plot targets and manually attack them (i.e. manual TDC). You can find it here: Wazoo's Manual Charting & Targeting Tutorial.

This is so much easier in the digital era than back in the film days where you had to wait for the results. When is the Nikon version coming? Reply Prathap December 5, at 6: Reply Dallas October 7, at 8: I have recently taken on the role of taken on sports pictures at Night. Soccer can I use these same steps or would you advise a different approach. Issue is blurred images due to night time and lighted fields. Thanks Dallas Rohan May 9, at 2: Basics are very clearly explained and its is simple to understand. Information is neatly composed and visuals are well displayedâ€¦. Reply Prathap December 5, at 8: Your words are very encouraging and valuable for me. Reply Sylvia December 7, at 4: Your work inspires and fuels me to keep shooting and learn from my mistakes. Reply Prathap December 7, at 7: Practice makes man perfect. It is definitely a challenge to keep yourself inspired unless you are truly passionate about what you photograph. Thanks a lot for your kind words. I wish you an enduring photographic experience and success. Reply Robert December 9, at 4: Would it be possible for you to add a print option so we might take the articles with us out into the field. Reply Prathap December 9, at 7: I have not yet thought about giving a print option. I will surely consider it. Beverly Morgan February 27, at 2: Beverly Prathap March 3, at Reply Ahmade asif June 21, at 4: Photographs that you use are truly amazing. Reply Prathap March 4, at 7: I am glad to know that they are easy to follow. I hope you enjoy the upcoming articles too. Reply Muzaffar Ahmed Khan November 4, at Thanks for contributing this guide for all those who are passionate to learn the photography skills. Khan Reply Prathap November 7, at 5: Thank you for taking time to read through my articles and letting me know about my work. I really appreciate it. Val December 5, at 6: I was shooting at a Starbucks at 8 at night. Reply Prathap December 9, at 8: At night which is low light condition , the auto focus does not work properly in most of the cameras. When auto focus hunts for the subject in the dark, it does not allow shutter to click. One solution would be to manually focus it and take the photo. Otherwise, choose the auto focus point manually that points to the highly lit subject in the scene like Starbucks board or something similar. The issue however would be to set the exposure properly so that you would let the brightness and the darker objects to be exposed well. Please check the exposure 9-part series to better understand about exposure and also about exposure compensation. If you want to use the slower shutter speeds, you have to use the tripod. I hope this helps. Reply David January 23, at 1: I want to say it is the best that I have read or seen demonstrated. Just by reading and observing I have already gained the confidence to start using the manual mode. Thanks for your excellent tutorial. I shall be referencing this until I become an expert in this mode. Reply Prathap January 24, at 1: I am so glad that it is useful. Vaishnavi February 15, at 1: Prathap February 17, at 8: Glad that it was helpful to you. Very simple and preside. Prathap June 4, at 2: Suresh Reply Suresh Raut June 10, at Its real simpal the way u explain. I would like tohave free e- book onDSLR concept made easy. Once again big thanks. Rajesh June 12, at At the end, will back button focus work with cannon D..? Could you please share the necessary settings for this..? Reply Prathap June 12, at Suppose, you are shooting a panorama in a semi-automatic mode, then you might want to lock the exposure between the shots. This helps you to keep the exposure constant across the multiple shots. I would recommend you to check out this youtube video https: Prathap June 17, at Calle Tiffany Lee July 14, at 3: Just needed the canon version of what I already know on a nikon. Reply abhay August 17, at As other have said I am getting confidence to use manual mode just by reading it. I will definitely follow this blog until I master the skill. Thank you Prathap August 18, at 9: Do let us know how it goes. Reply Deb August 29, at 9: Thanks for the easy tutorial. It helped me to use M mode for the first time. I have a question. Reply Prathap August 29, at While you are shooting landscape at night, you should always use a Tripod and aim for ISO or lower ISO values to avoid any noticeable noise. Do not use Auto ISO mode.
