Initial goal setting meeting with your coach. Unlimited communication with your coach. I initially intended to only run one high school season in preparation for wrestling, but quickly found myself enjoying the challenge of running. What started out as a 12 week commitment to the track and field team ended up as a 4 year high school career. I steadily improved over the course of 4 years of high school and ended up being a varsity runner during my last two seasons. While I was never the fastest runner on the team, it quickly became an important part of my life. I enjoyed the challenge and the constant pursuit of a new personal best. I ran occasionally while attending Truman State University but I took a break from serious training. I returned to the world of distance running in when I was hired as a teacher and coach at my alma mater, De Smet Jesuit High School. The relationships I build with the athletes year after year drive my passion for running. Over the last several years, I have had the privilege to work with the Big River Training Team and thoroughly enjoyed coaching dozens of Training Team members. Throughout my running career, I have completed numerous 5ks, 10ks, and half marathons and eight marathons with my time ranging from 4: I plan to apply the extensive knowledge and experience I have learned from my own racing to my work as a coach. I am thoroughly committed to helping my clients meet their running goals. Bryan can provide training plans and on a case by case basis, one-on-one coaching. Jim came to Big River upon retiring from a career in education. After moving to southern Illinois, he finished up his career in education as a principal for eight years and then as a district superintendent for nine years. He currently calls Edwardsville, Illinois home and has had the opportunity to attend every Track and Field Olympic Trials since , a tradition shared with his children. Jim is excited about working with clients of all fitness levels achieve their goals through Big River Personal Coaching. Want to keep up on all high school related news from Big River Running? Indirectly though, he was present in many of our conversations. Once for instance, my father asked me a series of questions that suddenly made me wonder if I understood even my father, whom I felt closer to than any man I have ever known, "you like to tell true stories" he asked and I answered, "Yes, I like to tell stories that are true. It is those we live with and love and should know who elude us. We lived at the junction of great trout rivers in Missoula, Montana where Indians still appeared out of the wilderness to walk the honky tonks and brothels of Front Street. To him, all good things - trout as well as eternal salvation - came by grace; and grace comes by art; and art does not come easy. The Burns family ran a general store in a one store town and still managed to do badly. They were Methodist, a denomination my father always referred to as Baptists who could read. And finally I said to him, "maybe all I really know about Paul is that he was a fine fisherman. The world is full of bastards, the number increasing rapidly the further one gets from Missoula, Montana. Perhaps we wondered after which one of us was tougher. So we returned to being gracious to one another, as the church well suggested. Then in the Arctic half-light of the canyon, all existence fades to a being with my soul and memories and the sounds of the Big Blackfoot River and a four-count rhythm and the hope that a fish will rise. Eventually, all things merge into one, and a river runs through it. On some of those rocks are timeless raindrops. Under the rocks are the words, and some of the words are theirs. I am haunted by waters. Maclean[edit] Each one of us here today will at one time in our lives look upon a loved one who is in need and ask the same question: We are willing to help, Lord, but what, if anything, is needed? For it is true we can seldom help those closest to us. And so it is those we live with and should know who elude us. But we can still love them - we can love completely without complete understanding. As I live and breathe. The hell with him. Well, I thought we were supposed to help him. How the hell do you help that son of a bitch? By taking him fishing. Well, maybe what he likes is somebody trying to help him.

Doe Run will sample the residential yards and remediate all those that exceed the cleanup level (lead concentrations greater than or equal to parts per million (ppm)) set forth in the Record of Decision for the Big River site.

The beginning of a river[change change source] The start of a river is called the source or head water. Young rivers often have lots of small waterfalls and rapids. As the rivers travel downhill they begin to erode the ground taking small bits of soft rock and soil. The source of a river may be a spring , often on a hill , mountain , glacier , or another high place. A spring is water that flows out from under the ground. The source of a river may be a lake where lots of water from small streams gathers when it rains or snows. A river may begin in mountains where there is snow. The melting snow runs together to form a small stream that runs down the mountain. As more little streams run in, the main stream gets bigger, until it forms a river. Some rivers flow from hills where there is no snow, but lots of rain. Some rivers only flow after there has been rain near the head water. The headwaters of the Arkansas River have rapids. Waterfalls are most often found in a young river. This river in Northern Australia only runs after heavy rain. The middle part of a river[change change source] The middle part of a river is called a mature river. A mature river makes a riverbed that is U-shaped. It might be very deep and run fast. It sweeps over small rocks and boulders, and makes big turns around hills and mountains. It is much wider than a young river, but not as wide as an old river. To cross over a mature river, people use bridges. Many cities and towns are built on the banks of mature rivers. Many farms that keep animals such as dairy cows , horses and sheep are along mature rivers because the animals can drink from the river every day. Clearwater River in Alberta is a "mature river". The Severn River flowing through farmland. The Rhine River valley has many towns. The city of Florence was built beside the Arno River. The last part of a river[change change source] A river usually ends by flowing into an ocean , a lake or a bigger river. As a river flows towards its mouth, the countryside around the river often changes from hilly to flat. As it flows over the flat land the river becomes wider and slower. An old river often floods across the land after there is lots of rain at the headwaters. An old river slowly builds up its banks on either side; the high banks are called levees. An old river often meanders twists and turns , and sometimes, after a flood, it leaves lakes behind which are called ox-bows or billabongs. Old rivers are the most useful type of river for growing crops. Corn , rice , fruit , cotton , hay , tobacco and sugar are some of the crops that are grown near old rivers. The shape of the mouth depends on the conditions of the sea where it flows. If there is a strong tide where the river meets the sea, the river forms an estuary. An estuary is a wide, funnel -like mouth of the river. The fresh water of the river mixes slowly with the salt water, becoming brackish water " somewhat salty water. Many kinds of fish , clams , molluscs and other sealife live at estuaries. Where a river flows out to the sea, it sometimes flows very slowly through sandy or muddy land, making lots of little islands as it flows. The main stream of the river gets broken into many parts that spread out into a triangle shape like the Greek letter delta. When this happens, it is called the delta of the river. Deltas are often places that are not good for towns or farms but are very good for birds and other wildlife and fishing. Deltas are often made into wildlife reserves. Not all rivers have deltas. The Nowitna is an old river with meanders and ox-bow lakes. The delta of the Ganges River in India The grassy islands of the Okavango delta are the home of elephants, lions and flamingos. Cities are often near the mouth of a river. Underground rivers[change change source] Some rivers flow underground through caves. Underground rivers form in places where there are lots of cracks in the rocks above, so that in rainy weather, the water runs down and collects in small underground streams. Sometimes the underground water trickles or gushes out of the ground to form a small spring of water. In other places, where there are caves, the small underground streams run together to form a river. The river can sometimes run through deep wide underground caverns. While many underground rivers flow gently, some underground rivers flow fast and have rapids , particularly after heavy rain. Many underground rivers flow out through a cave mouth to become an ordinary river. It can usually be drunk safely by people unless it is too dirty because of mud or human pollution. People and animals need fresh water to drink, so they often live by the side of a river. Rivers give water for drinking, bathing and washing clothes. Rivers give water for cattle and other animals to drink and for

people to grow plants. Rivers give products that are useful to people such as fish for food, clay for bricks and reeds to make the roofs of houses. Rivers can be used for transporting people, crops and other goods by boat. Rivers can be used to give power to turn machinery such as water mills. Rivers give water for factories that make cloth, steel and many other products. Rivers sometimes have dams to hold the water for people to drink, or to make electricity. Rivers can be used for leisure and sports such as swimming, boating, fishing and just walking by the river. Rivers often have beautiful scenery. Many painters, story-tellers and poets have painted or written about rivers. Rivers are sometimes turned into canals. Water for living[change change source] Two elephants have been taken to a river to drink and take a bath. A wool weaving factory on the Klyazma River. Cargo containers waiting for transport from North River Port, Moscow. Dams are built across rivers to store water and make electric power. Water for fun[change change source] Canoeing is a popular river sport.
