

## 1: Wikileaf: White Fire OG Marijuana Strain Information

*White Fire is a cannabis dispensary located in the San Jose, CA area. See their menu, reviews, deals, and photos.*

It has the same lemony and fuel scent that is reminiscent of Pine-Sol. Accompanying its smell is a refreshing note of pine. While its fragrance carries over, a peppery taste accompanies its diesel flavor. A sweet note of pine lingers upon exhaling its smoke. Instead, it is about knowing how much to use as well as recognizing individual tolerance level. Within limits, this strain is excellent for daytime use. At its onset, it brings about an uplifting feeling that enhances the mood. Users often feel not only happy but also ecstatic. In most cases, getting things done is made easier because of the energizing buzz induced by the strain. In a social gathering, most people find themselves being more sociable than usual. Expect bouts of giggling laughing as well. White Fire OG can deliver a clear head high as well as boost the creativity of users. Already feeling good about themselves, it is not hard to find inspiration as well as stay motivated in staying productive. However, some users may end up using more than enough. Granted that there are people who do prefer the extreme effects, beginners may be caught off guard by the intense buzzing high. Besides these conditions, some people may experience feeling a little bit anxious or paranoid. Often, beginners and anyone who overindulges are likely to have more pronounced effects. However, these are usually mild and do not cause any long-term health risks. As the high of the strain subside in two to four hours, these adverse reactions should also be almost gone by then. Primarily, it is due to its psychoactive properties that bring about the most benefits. It uplifts the soul. So, patients who are depressed are relieved by taking a few puffs. The calming effects of this potent strain also alleviate stressed and anxious people. Cancer patients are relieved of uncomfortable symptoms in many ways. One, this medical cannabis alleviates migraines, backaches and joint pains that are usually felt by patients. Another thing it does is to lessens nausea in patients undergoing chemotherapy. In return, it stimulates the appetite by inducing the munchies. At the onset, the energizing buzz brought about by White Fire OG combats fatigue. However, as physical relaxation spreads all over the body, some people may tend to feel a little lazy. At any rate, most people end up feeling drowsy during the comedown especially when using a more substantial amount. As such, insomniacs can use it to find sleep. Keeping this in mind, then it should not surprise growers to see unidentical plants in a batch. Mostly, the difference is in the shape of its flowers. For instance, the original has a barrel shape while another has a more conical shape. Other subtle differences include its fragrance. The pH levels should be controlled between 5. In 9 to 10 weeks, growers can already expect White Flower OG to flower and produce a generous yield of approximately grams per meter square. Looking to buy White Fire OG seeds? Check out this marijuana seed shop [Outdoors](#), it prefers warmer weather with around 28 to 30 degrees Celsius. Some growers use a CO2 drip for this marijuana strain to flourish. When it is near flowering time, this plant stretches and may take up some space. It usually flowers in October and yields grams per plant. Have you grown or used White Fire OG? If not, would you like to get your hands on this strain? Please leave a comment to let us know what you think. We want to hear from you.

For added gifs, you can also check out my review here! This story makes me think of Greek mythology in space. Gods exist in her world, though they try not to intervene but act more as viewers to the story. Kind of like the Greek gods in their douchy indifference to the plights of puny humans. They basically pick their favorites and sit by with popcorn, though at least our heroine has one that actually cares for her. Esmae has been watched over her entire life by Amba, the war goddess. Amba tries to guide Esmae away from trouble, but Esmae is tired of being without a family and living as a nobody. She wants the spotlight. She wants people to see her potential. The girl and the politics: I like Esmae, but she has so much room for growth. She imagines herself in a bigger role, and ignores the advice of those around her to push herself into the big leagues. This does make her relatable, though. I love the gray-ness of his character. And the protag hates him. The gods are telling her that if she makes the decisions that she wants to make, the outcome will be disastrous. In the end, Esmae is betrayed by those that should love her, though still beloved by the gods who watch her story. Though she tries to overcome her moral compass to win back her family, she sees the gray areas on both sides, and tries to come to the best solution. Her good intentions end up isolating her, but it also brings out her strength. She goes from naive optimist to betrayed and defiant heroine, and I love it. This feels like a great beginning; unfinished, but promising.

## 3: White Fire OG Cannabis Strain Information - Leafly

*White Fire OG, also known as WiFi OG, is a 60% sativa hybrid with uplifting and comfortable cerebrally focused effects. This strain combines the best features of its parent strains: the sour.*

Fire ecology Main article: Fire ecology Every natural ecosystem has its own fire regime , and the organisms in those ecosystems are adapted to or dependent upon that fire regime. Fire creates a mosaic of different habitat patches, each at a different stage of succession. Fossil record Main article: Making fire to generate heat and light made it possible for people to cook food, simultaneously increasing the variety and availability of nutrients and reducing disease by killing organisms in the food. The heat produced would also help people stay warm in cold weather, enabling them to live in cooler climates. Fire also kept nocturnal predators at bay. Evidence of cooked food is found from 1. By the Neolithic Revolution ,[ citation needed ] during the introduction of grain-based agriculture , people all over the world used fire as a tool in landscape management. These fires were typically controlled burns or "cool fires",[ citation needed ] as opposed to uncontrolled "hot fires", which damage the soil. Hot fires destroy plants and animals, and endanger communities. This is especially a problem in the forests of today where traditional burning is prevented in order to encourage the growth of timber crops. Cool fires are generally conducted in the spring and autumn. They clear undergrowth, burning up biomass that could trigger a hot fire should it get too dense. They provide a greater variety of environments, which encourages game and plant diversity. For humans, they make dense, impassable forests traversable. Another human use for fire in regards to landscape management is its use to clear land for agriculture. Slash-and-burn agriculture is still common across much of tropical Africa, Asia and South America. These harm ecosystems and human infrastructure, cause health problems, and send up spirals of carbon and soot that may encourage even more warming of the atmosphere “ and thus feed back into more fires. Globally today, as much as 5 million square kilometres “ an area more than half the size of the United States “ burns in a given year. In its broadest sense, fire is used by nearly every human being on earth in a controlled setting every day. Users of internal combustion vehicles employ fire every time they drive. Thermal power stations provide electricity for a large percentage of humanity. Hamburg after four fire-bombing raids in July , which killed an estimated 50, people [23] The use of fire in warfare has a long history. Fire was the basis of all early thermal weapons. Homer detailed the use of fire by Greek soldiers who hid in a wooden horse to burn Troy during the Trojan war. Later the Byzantine fleet used Greek fire to attack ships and men. In the First World War , the first modern flamethrowers were used by infantry, and were successfully mounted on armoured vehicles in the Second World War. In the latter war, incendiary bombs were used by Axis and Allies alike, notably on Tokyo, Rotterdam, London, Hamburg and, notoriously, at Dresden ; in the latter two cases firestorms were deliberately caused in which a ring of fire surrounding each city[ citation needed ] was drawn inward by an updraft caused by a central cluster of fires. The United States Army Air Force also extensively used incendiaries against Japanese targets in the latter months of the war, devastating entire cities constructed primarily of wood and paper houses. The use of napalm was employed in July , towards the end of the Second World War ; [24] although its use did not gain public attention until the Vietnam War.

*During Fire Prevention Week, we renew our commitment to preparedness, fire safety awareness, and individual responsibility. We also honor our brave firefighters who have lost their lives in the.*

Reasons[ edit ] The British government, already at war with Napoleonic France , adopted a defensive strategy against the United States when the Americans declared war in Reinforcements were held back from Canada and reliance was instead made on local militias and native allies to bolster the British Army in Canada. However, after the defeat and exile of Napoleon Bonaparte in April , Britain was able to use its now available troops and ships to prosecute its war with the United States. In addition to reinforcements sent to Canada, the Earl of Bathurst , Secretary of State for War and the Colonies , dispatched an army brigade and additional naval vessels to Bermuda , from where a blockade of the US coast and even the occupation of some coastal islands had been overseen throughout the war. It was decided to use these forces in raids along the Atlantic seaboard to draw American forces away from Canada. On June 25 he wrote to Cochrane stressing that the defenses there were weak, and he felt that several major cities were vulnerable to attack. On July 17, Cockburn recommended Washington as the target, because of the comparative ease of attacking the national capital and "the greater political effect likely to result". An added motive was retaliation for what Britain saw as the "wanton destruction of private property along the north shores of Lake Erie" by American forces under Col. You are hereby required and directed to destroy and lay waste such towns and districts as you may find assailable". They were confronted a number of times while on horseback by older women from around Washington City and elderly clergymen Southern Presbyterian and Southern Baptist , with women and children who had been hiding in homes and churches. They requested protection from abuse and robbery by enlisted personnel from the British Expeditionary Forces whom they accused of having tried to ransack private homes and other buildings. Major-General Ross had two British soldiers put in chains for violation of his general order. Throughout the events of that day, a severe storm blew into the city, worsening on the night of August 24, Events[ edit ] Burning of Washington August President James Madison , members of his government, and the military fled the city in the wake of the British victory at the Battle of Bladensburg. They eventually found refuge for the night in Brookeville , a small town in Montgomery County, Maryland , which is known today as the United States Capital for a Day. President Madison spent the night in the house of Caleb Bentley , a Quaker who lived and worked in Brookeville. Blanshard reported that it seemed that the American President was so sure that the attacking force would be made prisoners that a handsome entertainment had been prepared. Blanshard and his sappers enjoyed the feast. Watercolor and ink depiction from , restored. The Capitol was, according to some contemporary travelers, the only building in Washington "worthy to be noticed. Upon arrival into the city via Maryland Avenue, the British targeted the Capitol first the southern wing, containing the House of Representatives, then the northern wing, containing the Senate. They set fire to the southern wing first. The flames grew so quickly that the British were prevented from collecting enough wood to burn the stone walls completely. Madison escaped from the White House, she cut out from the frame the large portrait of Washington now in one of the parlors there , and carried it off. She had no time for doing it. It would have required a ladder to get it down. All she carried off was the silver in her reticule , as the British were thought to be but a few squares off, and were expected any moment. In , President Barack Obama held a ceremony at the White House to honor Jennings as a representative of his contributions to saving the Gilbert Stuart painting and other valuables. The painting that was saved was a copy Stuart made of the painting, not the original, [29] although it is the same one on display in the East Room. They looked at the painting their relative helped save. Capitol and Treasury Building are at far right. However, several women persuaded him not to because they were afraid the fire would spread to their neighboring houses. Cockburn wanted to destroy the newspaper because its reporters had written so negatively about him, branding him "The Ruffian". Instead, he ordered his troops to tear the building down brick by brick, and ordered all the "C" type destroyed "so that the rascals can have no further means of abusing my name". The United States Department of War building was also burned. However, the War and State Department files had been removed, so the

books and records had been saved; the only records of the War Department lost were recommendations of appointments for the Army and letters received from seven years earlier. Patent Office Building was saved by the efforts of William Thornton, the former Architect of the Capitol and then the Superintendent of Patents, who gained British cooperation to preserve it. The fort, later known as Fort McNair, had already been destroyed by the Americans, but barrels of gunpowder remained. While the British were trying to destroy it by dropping the barrels into a well, the powder ignited. As many as thirty men were killed in the explosion, and many others were maimed. It also spun off a tornado that passed through the center of the capital, setting down on Constitution Avenue [4] and lifting two cannons before dropping them several yards away and killing British troops and American civilians alike. There is some debate regarding the effect of this storm on the occupation. While some assert that the storm forced their retreat, [4] it seems likely from their destructive and arsonous actions before the storm, and their written orders from Cochrane to "destroy and lay waste", [42] that their intention was merely to raze the city, rather than occupy it for an extended period. Whatever the case, the British occupation of Washington lasted only about 26 hours. Despite this, the "Storm that saved Washington", as it became known, did the opposite according to some. The rains sizzled and cracked the already charred walls of the White House and ripped away at structures the British had no plans to destroy such as the Patent Office. The storm may have exacerbated an already dire situation for Washington DC. Is this the weather to which you are accustomed to in this infernal country? The Royal Navy reported that it lost one man killed and six wounded in the attack, of whom the fatality and three of the wounded were from the Corps of Colonial Marines. The mayor of Alexandria made a deal and the British refrained from burning the town. Due to the destruction of the Capitol and other public buildings, they initially met in the Post and Patent Office building. Aftermath[ edit ] Most contemporary American observers, including newspapers representing anti-war Federalists, condemned the destruction of the public buildings as needless vandalism. According to The Annual Register, the burning had "brought a heavy censure on the British character", with some members of Parliament, including the anti-establishment MP Samuel Whitbread, [48] joining in the criticism. The majority of British opinion believed that the burnings were justified following the damage that United States forces had done with its incursions into Canada. In addition, they noted that the United States had been the aggressor, declaring war and initiating it. One pair currently hangs in the House of Assembly of the Parliament of Bermuda, and the other in the Cabinet Building, both in the city of Hamilton. Patent Office was spared. Congressmen from the North pushed for relocation to Philadelphia or other prominent northern cities, while Southern congressmen claimed that moving the capital would degrade the American sense of dignity and strength however many southern congressmen simply did not want to move the capital north of the Mason-Dixon line. The largest donor was Daniel Carroll of Duddington, a rich English property owner in the area. The Old Brick Capitol took only five months to complete; the Capitol took twelve years. With the reconstruction of the public buildings in Washington, the value of land in the area increased dramatically, paving the way for the expansion of the city that developed in the years leading up to the American Civil War.
