Then you grow up, start worrying about your health and put your diet under the microscope to analyze everything. You get to peanut butter and you wonder, do I ditch this old fave or can it possibly be part of my diet? The health benefits of peanut butter cannot be denied. Keep reading! The Health Benefits of Peanut Butter Source of Protein 2 tablespoons of peanut butter are what you should consume if you want to stay on the healthy end of the peanut butter consumption scale. These 2 tablespoons pack in 7 grams of protein. This is why peanut butter on toast makes for a great breakfast or mid morning meal choice. As a protein-rich food, when you eat peanut butter you feel fuller for longer. Additionally the protein is also good for building and repairing muscles, which is especially important if you work out a lot. Heart Friendly Someone like you and me, who clearly loves their peanut butter, asked the Harvard Medical School if the health benefits of peanut butter extended to heart health. And despite your misgivings, the answer is yes! Peanut butter has its share of saturated food, but like olive oil, it also has a high percentage of unsaturated helping it qualify itself for the healthy camp. More Potassium Most of us have way too much sodium in our diets and as you probably already know, sodium can wreak havoc on your cardiovascular system. Healthy Fat A common worry about eating peanut butter is the fat content. However, as mentioned above peanut butter contains more unsaturated fat than saturated fat. Energy Booster As already discussed, peanut butter contains good amounts of healthy fats and protein. This means it contains plenty of calories that will give you lots of energy for your activities. Again, perfect for a morning meal as it gives you an energy hit for the day. Adequate consumption of fiber is important for the healthy functioning of your body and of course you can get more fiber from other meals but peanut butter can help supplement this. Due to its protein and fiber content, when you eat peanut butter you actually feel fuller for longer. The list of good things about peanut butter just go on. One serving of peanut butter will give you at least 3 mg of the antioxidant Vitamin E. Additionally, you will also get magnesium about 49g which is excellent for bone building and muscle recovery and a small but still important amount 0. This will be fairly similar across most brands and is not the best indication of whether a peanut butter is good for you. Here are some quick little tips to help you make a decision. All natural peanut butter is a good choice if you want to minimize your intake of unhealthy fats. Natural nut butters usually have peanuts as their main ingredient while others non-natural can sometimes contain other artificial ingredients to enhance the taste. The sugar content on the peanut butter should be a decisive factor. Commercial peanut butter brands can sometimes have up to mg per tablespoon more sugar than natural brands. Look out for the sodium content on the ingredients list at the back of your jar of peanut butter. Again, natural brands usually have less sodium. Too much sodium can also mask the nutty flavor.

Check out next year! Starting with the first section Year. These are small boxes. For me, this is perfect for my year in review. Next up is the monthly view. Next is the weekly view. Each week is a 2 page spread. With Task Lists on the upper left side. Plenty of room to write my projects for the week. Plenty of room for my appointments. There are 11 lines to write on. There are no times written it. This is the perfect calendar for a busy woman! Next up is tasks, blank pages, lots of them! Another great touch is that you can title each page. More blank pages are available under the projects tab. Next up is the info tab. A place to keep name, address and phone number. The last tab is the shopping lists. There are a bunch! That is so convenient! In the back there are pockets to keep stray papers and receipts! My wallet is super excited about that one!! It was busting at the seams! Throughout the entire planner there are beautiful, thoughtful sayings scattered. I thought the following tip from Homemakers Friend website was an important one to include: Next years calendar is brown and a beautiful yellow. Thank you Homemakers Friend! This is a perfect addition to my life! I received one or more of the products mentioned above for free using Tomoson. Regardless, I only recommend products or services I use personally and believe will be good for my readers.

*Who Got Peanut Butter On My Daily Planner Organizing And Loving Your Days As A Mom Ebook Who Got Peanut Butter On My Daily Planner Organizing And Loving Your Days As A Mom currently available at [www.enganchecubano.com](http://www.enganchecubano.com) for review only, if you need complete.*

Peanut butter is a relatively unprocessed food. Eating too much added sugar and trans fat has been linked to various health problems, such as heart disease <sup>2</sup> , <sup>3</sup>. Rather than buying junk food, choose real peanut butter. It should contain nothing but peanuts and maybe a bit of salt. Summary Peanut butter is basically a paste made of peanuts. Many lower-quality products also contain added sugar and vegetable oils. Peanut butter is a fairly balanced energy source that supplies all of the three macronutrients. A g portion of peanut butter contains 4: Peanuts belong to the legume family, which also includes beans, peas and lentils. Legume protein is much lower in methionine and cysteine compared to animal protein. For those who rely on peanut butter or beans as their main protein source, methionine insufficiency is a real risk. On the other hand, low methionine intake has also been hypothesized to have some health benefits. For other protein-rich plant foods, check out this article on the 17 best protein sources for vegans and vegetarians. However, it is low in the essential amino acid methionine. It also causes a very low rise in blood sugar and is a perfect option for people with type 2 diabetes <sup>7</sup>. These benefits have been partly attributed to oleic acid, one of the main fats in peanuts. Antioxidants may also play a role <sup>9</sup> , Summary Peanuts are low in carbs and suitable for people with type 2 diabetes or those following a low-carb diet. High in Healthy Fats Since peanut butter is very high in fat, a gram portion contains a hefty dose of calories. Despite their high calorie content, eating moderate amounts of pure peanut butter or whole peanuts is perfectly fine on a weight-loss diet Half of the fat in peanut butter is made up of oleic acid, a healthy type of monounsaturated fat also found in high amounts in olive oil. Oleic acid has been linked to several health benefits, such as improved insulin sensitivity <sup>9</sup>. Peanut butter also contains some linoleic acid, an essential omega-6 fatty acid abundant in most vegetable oils. Some studies suggest that a high intake of omega-6 fatty acids, relative to omega-3 , may increase inflammation and the risk of chronic disease. However, not all scientists are convinced. Higher-quality studies show that linoleic acid does not raise the blood levels of inflammatory markers, casting doubt on this theory <sup>13</sup> , Summary Pure peanut butter is a good source of healthy fats. While some people have been worried about its omega-6 linoleic acid content, limited evidence justifies their concerns. Peanut butter is fairly nutritious. A gram portion of peanut butter provides many vitamins and minerals <sup>4</sup>: However, be aware that this is for a gram portion, which has a total of calories. Summary Although peanut butter is high in many healthy vitamins and minerals, it also contains a substantial amount of calories. Like most real foods, peanut butter contains more than just the basic vitamins and minerals. It also contains plenty of other biologically active nutrients, which can have some health benefits. Peanut butter is quite rich in antioxidants like p-coumaric acid, which may reduce arthritis in rats It also contains some resveratrol, which is associated with a lower risk of heart disease and other chronic diseases in animals <sup>16</sup> , Resveratrol has many other potential benefits , although human evidence is still limited. Summary Peanut butter is rich in antioxidants, including p-coumarin and resveratrol. These plant compounds have been linked to various health benefits in animals. Even though peanut butter is quite nutritious, it may also contain substances that can be harmful. At the top of the list are the so-called aflatoxins Peanuts grow underground, where they tend to be colonized by a ubiquitous mold called *Aspergillus*. This mold is a source of aflatoxins, which are highly carcinogenic. While humans are fairly resistant to the short-term effects of aflatoxins, what happens down the line is not fully known at this point. Some human studies have linked aflatoxin exposure to liver cancer, stunted growth in children and mental retardation <sup>19</sup> , <sup>20</sup> , <sup>21</sup> , But there is some good news. For more information on food molds, check out this article. Summary Peanut butter may contain varying levels of aflatoxins, which are toxic compounds formed by a type of mold. They have been associated with an increased risk of liver cancer. The Bottom Line There are a lot of good things about peanut butter, but also a few negatives. However, it can be almost impossible to stop after eating just a spoon full. So if you have a tendency to binge on peanut butter, it may be best to avoid it altogether. If you can keep it

## WHO GOT PEANUT BUTTER ON MY DAILY PLANNER? pdf

moderate, by all means, continue to enjoy peanut butter every now and then. Moderate consumption of peanut butter is unlikely to have any major negative effects as long as you are avoiding truly awful foods like sugary soda, trans fats and other highly processed junk foods.
