

1: Wondering about a weather cancellation?? | Hope United Methodist Church

Winter weather is on its way! Here is some key information families need to know. When hazardous weather is a concern, decisions regarding schedule changes are made in the early morning, before school, when current weather conditions can be assessed.

Somewhere in Happened in: The atmosphere becomes unstable and the change in wind directions create a spinning effect. So, basically the tornado is a spinning column of air that is usually a cone shape and a gray color. But, there is one more main factor that makes tornados start. There needs to be a thunderstorm. The moisture is carried by the wind forms the thunderstorm and the thunderstorm starts the tornado! The worse the storm, the more likely a tornado will occur. Also, they are some of the most destructive natural disasters. Impact Tornadoes are very dangerous. They kill thousands of people each year. You need to make sure to get shelter when there is a tornado alert, meaning go in a basement. Make sure you know if there is a tornado ahead of time. Lots of people lose their jobs and houses because of tornadoes. They also lose loved ones and get injured because of a tornado. Tornadoes are very bad for your health because the air carries pollution and dirt and flying objects. Make sure you are far away from tornadoes because if you are too close you might get sucked in and die. What Can Tornadoes Look Like? Tornadoes are usually gray or black. They stretch from the clouds to the ground. They are funnel shaped and usually appear during thunderstorms. Tornadoes are made of incredibly strong winds that can climb to speeds of mph and cause major destruction. These hostile winds also spin and cause very dangerous storms. A gray or black funnel shape stretching from the clouds to the ground and swirling furiously.

Between this day and Twain's are barely years worth of actual on-the-ground data about what happens with the weather in the central Sierra.

The flowers are blooming, the trees are budding, and yes, the breeze is carrying the pollen along. There was heavy snow and intense cold in the north and central parts of the country, which spilled down into North Carolina. All the while, the western part of the nation experienced record-breaking heat and drought. As the world warms, the long-term climate trend is for winters to be warmer and shorter with summers to be hotter and longer. But climate scientists note the daily weather can still change because hot and cold air still moves around like it used to before the world was warming. Imagine a man walking his dog up a hill. The man represents everyone who lives in a town or city, or a state or nation, or even the planet. The dog represents the day-to-day weather. The incline of the hill represents the temperature while the hill itself represents the climate. As the man and his dog progress up the hill, though the temperature is gradually warming, the dog still wanders back and forth. In other words, the daily weather is changing. Everything is still warming, but the daily weather can change. Climate determines what clothes are in your closet and whether you buy a certain coat. Weather determines tactical decisions, such as what coat will you wear on a particular day. Scientists call it an exception. So what type of weather can we expect to see? In general, winters will be warmer and shorter while summers will be longer and warmer. Scientists say rain and snow events will be different as well. Think about how a clothes dryer warms the air; warmer air evaporates water more quickly because warm air holds more water vapor. A warmer world will also bring more heat events such as extreme droughts. There will also be fewer cold events. The warmer, wetter atmosphere could also generate more severe storms. All of this climate projection is based on an analysis of massive amounts of data. The Asheville center collects almost four petabytes, or one million gigabytes, of weather data per year. It is collected from weather stations, airports, weather observers and satellites. Scientists hope people will use the information in planning for a changing climate.

Sitting in Steamboat but Watching Florida Weather. Every time we get ready to leave our home in Steamboat and head out for the high seas, our mutual level of craziness seems steadily increase until it finally reaches a crescendo a few days before departure.

Updated Sep 13, at 9: See the weather forecast and tracks. With Hurricane Florence imperiling Georgia more than before, people living in Atlanta are wondering about the effect on them and their city. To what degree is Atlanta in the path of Hurricane Florence? Here is the forecast: Florence is a cat 3 hurricane tracking northwestward towards the U. There remains a chance for eastern Georgia to observe tropical storm force winds and potentially heavy rainfall as the storm moves inland. A few storms could be strong with gusty winds, frequent lightning and heavy rainfall. Isolated thunderstorms are possible over the northeast mountains on Friday, primarily in the afternoon. The weather hazards for Saturday through Tuesday will greatly depend on the track of Hurricane Florence. Florence is a major Hurricane moving across the Atlantic and looks to make landfall on Friday somewhere along the Carolina coastline. After landfall, there is great uncertainty as to where Florence will go but there are increased indications that the remnants of Florence could affect at least portions of north and central Georgia late Saturday through Tuesday. The situation continues to be a watch and monitor, so please stay tuned to your local forecast. See the hourly forecast for Atlanta. View details by clicking this link! Finally, I ask all Georgians to join me in praying for the safety of our people and all those in the path of Hurricane Florence.

Mostly cloudy, with a low around East wind around 5 mph. Thursday A 20 percent chance of showers and thunderstorms after 1pm. Partly sunny, with a high near Northeast wind around 5 mph.
