The examples below are just that -- examples to give you ideas when writing your IEPs. Please include the category for posting. Your contribution will be much appreciated!

2: Communication Infant Developmental Milestones - Children's Therapy & Family Resource Centre

WordNet is an on-line lexical reference system whose design is inspired by current psycholinguistic theories of human lexical memory; version is the most up-to-date version of the system. The WordNet CD-ROM contains the complete WordNet system for PC and Macintosh computers, including the database and semantic concordance packages.

Questions to Ask Yourself Acknowledgements [Page ix] This book is dedicated to all our friends, family and colleagues with whom we have spent many happy hours talking. To Pammie, with love and thanks, for your friendship, and belief in us. With thanks also to Jude and Katie at Sage for all their support and encouragement. They are always looking for practical advice and new ideas. In this Hands-on Guide we aim to assist practitioners in supporting the language and communication of the children in their pre-school. Each chapter can be used alone for straightforward advice and ideas or quick reference. The book can be read as an overview of language development with guidance to support sound preschool practice. In Chapters 2 – 7 you will be given: In Chapters 8 – 10 you will be given an understanding of: Pre-School Practitioners This book will enable you to develop your knowledge and understanding of pre-school communication and language. You will be supported by practical examples and pro-formas and formats for ideas to use within your setting. These can be used as presented in the book or adapted or personalised to suit your own needs. The hands-on activities will provide a starting point for team discussion. The Hands-on activities can be used as short assignments. Stand-alone chapters can be used as the basis of training. The hands-on activities will provide discussion points for staff teams. The activities, strategies and ideas are all relevant and can be easily adapted for the home environment. They are not specific to any one child, practitioner or setting. A Crossword – Words Forc Practitioners To get you started here is a quick crossword containing words which are explained at various points throughout the book. Have a go and test your knowledge of some basic terms connected with speech, language and communication. The solution is provided in Appendix B at the back of the book.

Speech Therapy Audio Course What will you learn? Speech Therapy is a practice that assists people with speech and language disorders or who have trouble swallowing. This course takes you through the role of a speech therapist, the anatomical structures and physiological functions of speech and hearing, phonetics, language development and speech disorders, the structure of language, and career paths in this field. The Speech Therapy Course introduces the subject by outlining the basics. It provides an overview of speech disorders and the therapeutic practices used to treat them. Read more What will you learn? To understand speech you need a good level of knowledge about the anatomical structures and physiological functions of the speech organs. This course will talk you through these and the respiratory, laryngeal, and articulatory systems, which all have a bearing on speech. Similarly, you will learn about audiology. The course talks you through the structures and functions belonging to the auditory system and explains the physiology of hearing. You will learn about these and the signs that could indicate hearing loss, which would require an audiology assessment referral. You will discover the various stages that exist within linguistic advancement in monolingual and bilingual children. Equally as interesting is Phonetics the study of human speech sounds. The Speech Therapy Course breaks the topic down into its three branches and explains each fully: The study of the way in which speech sounds are produced Acoustic Phonetics: Analyses the physical properties of speech Auditory Phonetics: The course considers the structure of language, described through morphology, syntax and semantics. The Speech Therapy Course provides a deep exploration into various conditions that can affect the development of speech and language and how this manifests itself in each case. For those considering a career as a speech therapist, the course provides information on, and examples of, the various positions and working environments that speech and language therapists may practice in. In each example, duties and responsibilities that occur within these departments are described. This course, although comprehensive, does not qualify you as a Speech and Language Therapist or to use that protected title. To qualify as such students would be expected to complete a HCPC approved postgraduate course. Course Syllabus What will I learn on the course? The Role of a Speech Therapist Part 2: Overview on Treatment Approaches Part 3:
